Technical Specification

Aqua Cooling Solutions Ltd. operates a policy of continual product improvement and therefore reserve the right to change the specification without notice. This manual may describe features which are not incorporated in your equipment but which are available either to special order or as an upgrade. If you wish to know more about these features or wish to upgrade your equipment, please contact Aqua Cooling Solutions Ltd..

Disclaimer

Aqua Cooling Solutions Ltd. shall not be liable for any damages resulting from misapplication or misuse of its products.

Equipment Usage

Aqua Cooling Solutions Ltd. cannot be held responsible for personal injury or equipment damage where the product is used for anything other than its intended purpose. Safety will be impaired if the equipment is used in a manner other than that specified in this manual or on-line instructions.

Liability Statement

We have used our best efforts to ensure that the content of this document is both useful and correct at the time of publication. The content of this document is supplied for information only, is subject to change without notice, and should not be construed as a commitment by Aqua Cooling Solutions Ltd.. The authors and Aqua Cooling Solutions Ltd. assume no responsibility or liability for any errors or inaccuracies that may appear in this document, nor the use to which it may be put.

Product standards

Unless otherwise stated, products marketed and supplied by Aqua Cooling Solutions Ltd., when installed and operated in accordance with their instructions, conform to EMC directive and essential Health and Safety requirements of the Machinery Directive 91/368/EEC-93/44/EEC and 93/68/EEC.

Introduction to the LPS

1.1 Introduction

This manual covers the operational procedures for the Leak Prevention System (LPS) units and is intended to be used by the following categories of people:

- Those who assess the suitability of the LPS for specific requirements.
- Those who install, configure and test the physical components of the LPS.
- Those who operate the LPS.
- Those who carry out servicing and maintenance of the LPS at the installation site.

1.2 Customer support

For technical help and support, you can contact Aqua Cooling Solutions Ltd. using any of the following details.

Aqua Cooling Solutions Ltd. contact details

Internet	www.aquacooling.co.uk
Telephone	+44 (0)845 0941 800
Fax	+44 (0)845 0941 900
Email	support@aquacooling.co.uk
Mail	Aqua Cooling Solutions Ltd. Unit D4 Segensworth Business Centre Segensworth Road Fareham Hampshire PO15 5RQ UK

To help us expedite your request, please have the following information available:

- The name and address of your organization.
- Your telephone and fax numbers.
- A contact name and e-mail address.
- The equipment model and serial numbers, **which are located where?**
- A description of the fault, including any relevant data, if available.

1.3 Safety notices

Note:

All personnel involved in the installation and maintenance of the equipment, whether directly or indirectly, must read this notice and this complete document prior to the commencement of any work.

Observe all warning and safety placards applied to the equipment. Failure to observe all warnings can result in serious injury or death to the operator and severe mechanical damage to the unit.

Important

Failure to comply with the manufacturer's installation instructions could affect the reliability and performance of the unit and invalidate the warranty.

Warranty is also subject to the implementation of a planned service/maintenance agreement as stipulated in the warranty booklet supplied with the unit and/or the sales contract

1.3.1 Working practices

In addition to the specific warnings contained in this manual, the following principles are considered as good working practice:

- The following information must be read, fully understood and adhered to at all times.
- The safety of you and other persons must be your main concern.
- Never carry out a task until you fully understand what you are being asked to do and how to do it safely.
- Never carry out a task you feel could be dangerous to you and other persons.
- Do not carry out any task that you are not qualified to undertake.
- Always comply with all safety rules as laid down by the relevant authorities.
- If you have any questions or concerns over the safety of you or other persons you must consult your supervisor within the company prior to the commencement of any task.
- Never start work on a unit or remove any casings, guards, doors or covers without first switching off and isolating the unit and controllers from the electrical supply.
- Make sure all rotating parts are at rest before commencement of any work on the unit.
- The safety policy of the company on whose premises the unit is installed should be read and understood by maintenance personnel.

1.3.2 General

Temperature control equipment presents mechanical, electrical, noise or vibration hazards. Observe all safety, installation, operation and maintenance instructions.

Installation, servicing and operation of the equipment can only be carried out by fully trained and technically competent personnel.

Aqua Cooling Solutions Ltd. temperature control equipment is designed to minimise mechanical and electrical hazards by fully restricting access through unit casings, doors and covers whilst equipment is operational.

Some installations may require additional protective features to prevent accidental contact with components. Aqua Cooling Solutions Ltd. can provide advice and make recommendations for additional protection to suit the application.

All installation work must be completed in accordance with the safety, installation, operation and maintenance instructions, and the unit must be correctly earthed, prior to operation.

Prior to any maintenance work being carried out, ensure that:

- Equipment is switched off.
- Equipment and controls are isolated from the electrical supply.
- All rotating parts have come to rest.

If in any doubt as to the correct interpretation of performing the safety, installation, operation and maintenance instructions, it is essential that Aqua Cooling Solutions Ltd., their agent or appointed distributor is consulted for advice and clarification.

1.3.3 Installation and handling

The installation and operation must be conducted in accordance with local regulations and accepted codes of good practice.

Installation and Maintenance Guide

When moving or lifting the unit, observe caution at all times to ensure the safety of all personnel. Use only appropriate and approved lifting equipment.

Equipment and products that have been installed and commissioned by Aqua Cooling Solutions Ltd. must be maintained by, or under supervision of, technical, competent personnel and all work must be carried out in accordance with good engineering practice and strict adherence to:

- EE regulations
- Good engineering practice
- Supply authorities
- Statutory requirements
- Manufacturer's instructions and recommendations
- All other relevant information, regulations and legislation.

1.3.4 Application

The unit must be used only for the application for which it was designed.

Do not use the unit in a hazardous environment unless it has been specially designed and approved for such an application.

1.3.5 Electrical

The unit must be connected to an external isolator if one is not fitted to the unit.

Electrical connections must be carried out in accordance with national and local regulations. In the UK, standard BS 7671 applies. Never make any connections in the unit circuits unless the electricity supply has been switched off at the isolators.

1.3.6 Maintenance and servicing

For information about maintenance and servicing, see “Maintenance and servicing”, on page 19.

1.3.7 Waste management

Waste materials must be disposed of in a professional and responsible manner and in strict adherence to environmental regulations. For details, consult local environmental agencies.

1.3.8 Documentation

All documentation must remain with the unit at all times.

1.3.9 Machine Directive 2006/42/EC

The machinery has been inspected against the essential health and safety requirements of the Machinery Directive relating to the design and construction, which are detailed within the six chapters of Annex I of the Directive.

A technical file that demonstrates the conformity of the machine with the Directive has been compiled and is available to the authorities on request.

The CE markings and other information have been placed on the machine, and a declaration of conformity has been supplied with the machine.

If alterations are made to this equipment without our approval, the declaration of conformity becomes invalid. Furthermore, this equipment may be assembled into other systems that may also constitute machinery and shall not be put into service until the assembled system has been declared in conformity with the Machinery Directive.

1.4 General information

Our Cooling Distribution Unit (CDU) with Leak Prevention System (LPS), is used in data centers and computer rooms, for supplying chilled water to cooling coils. The LPS enables data center cooling water pipework to operate under negative pressure. In the event of a leak or damage, water does not escape and the data center continues to operate uninterrupted until a repair can be carried out.

Traditional systems and CDUs use pumps to pump water round the water circuit, under positive pressure (greater than atmospheric). They often incorporate heat exchangers, to separate the systems into a primary and secondary system, reducing the system volume on the secondary side. They are also used to elevate the water temperatures from the primary to the secondary side, as the cooling coils often run above the dew point, thus avoiding condensation forming on the coils or the pipework.

The Aqua Cooling CDU with LPS uses a Venturi to generate a negative pressure water flow (lower than atmospheric). This means that all the data center environment and coils have water circulated through the system with a pressure that is less than the pressure in the atmosphere. In the event of a leak, air is sucked into the pipework rather than liquid being released. When air is sucked into the pipework, the water circulation carries the air back to the LPS, where the amount of air is measured and then expelled to the atmosphere.

The CDU with LPS is available in a variety of models, from 50kW to 500kW in the standard units, to multi MW platforms, through our special projects team. All are available with run and standby pumps, offering an N+1 pumping station.

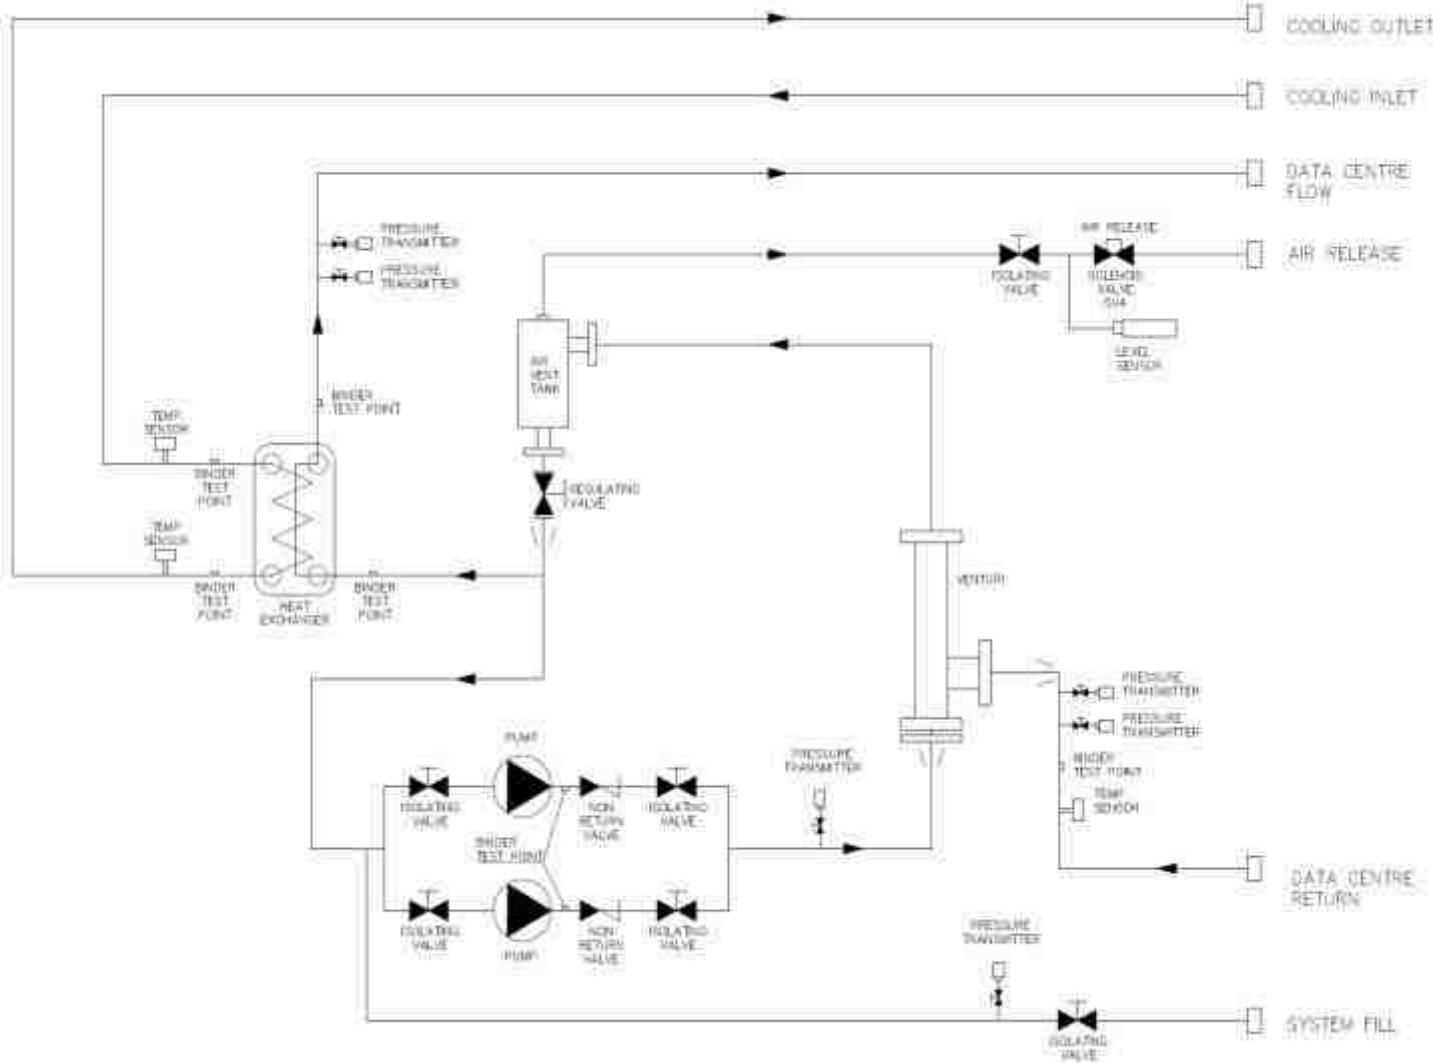

1.4.1 LPS main components

The LPS series of units vary in configuration. Appendix B provides details of the main components of the standard LPS units.

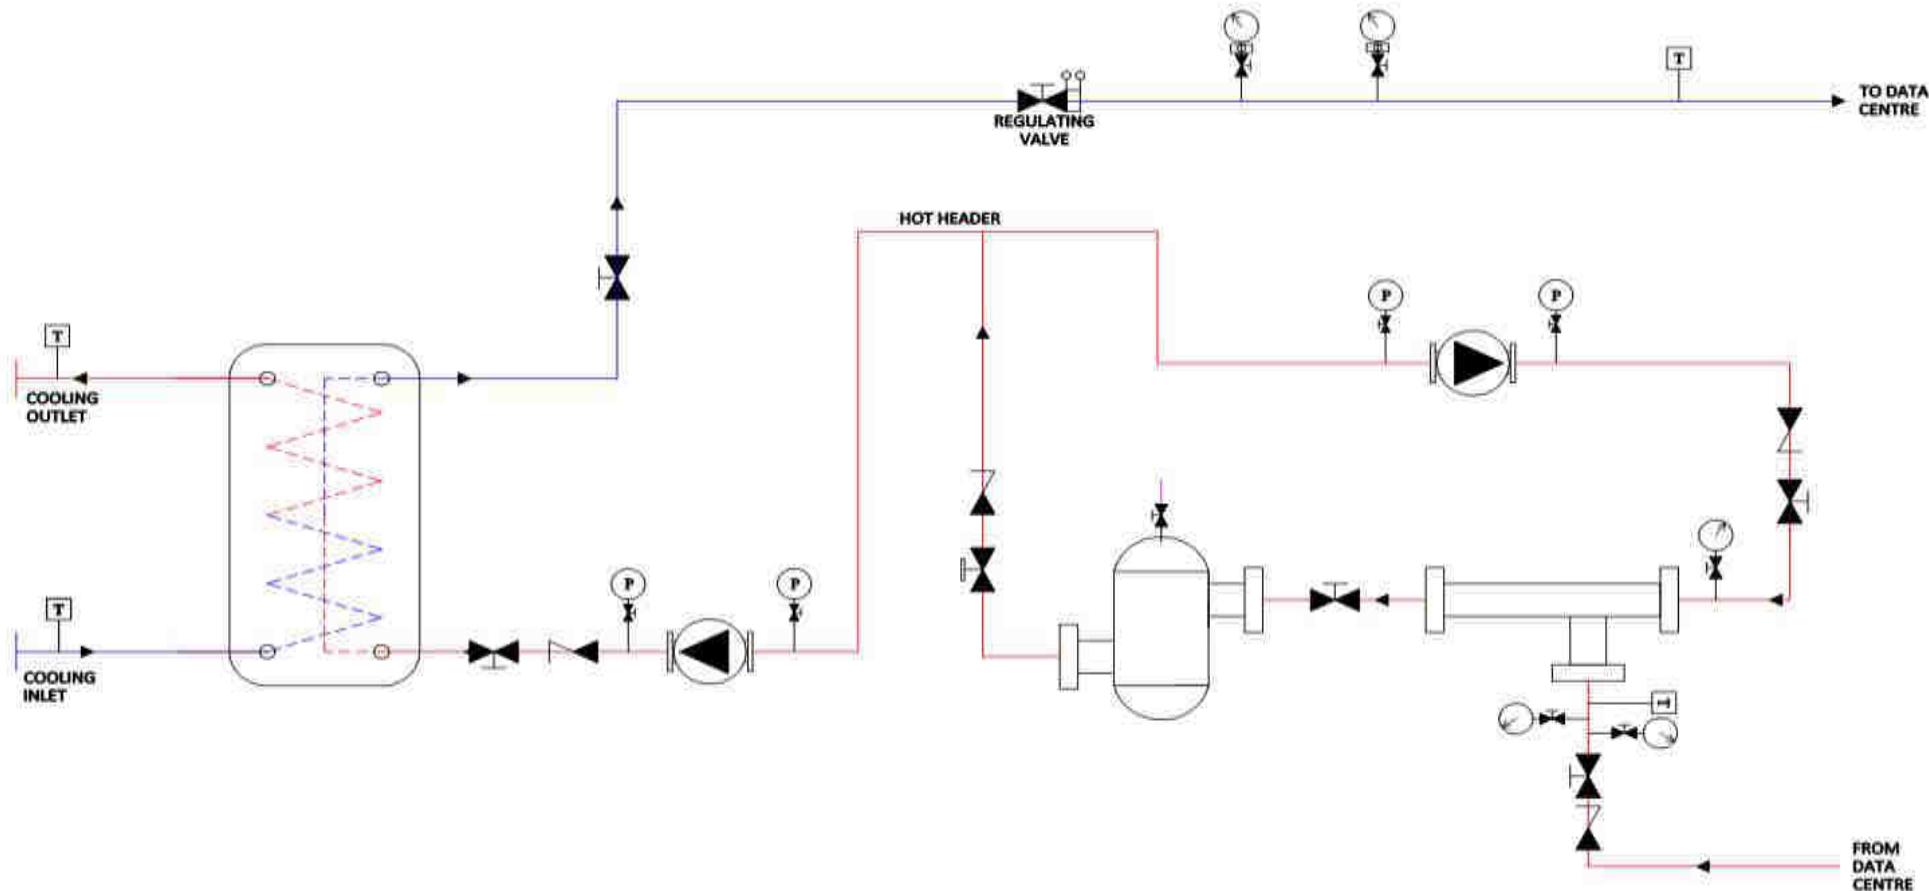

1.4.2 System schematics

The standard configuration of the LPS system is shown in Schematic 1. We also offer an alternative configuration, shown in Schematic 2.

Schematic 1: Basic configuration of the LPS system

Schematic 2: Optional configuration of the LPS system

1.4.3 LPS control logic

1.4.3.1 Negative pressure and motive pump speed

The motive pump, driven by a Danfoss Inverter, regulates the speed of the pump based on the set point pressure of the system. The system pressure changes as a result of two port valves opening and closing. The pressure is set on commissioning to a value that corresponds with the design flow requirement. However, this can be changed using the microprocessor control unit. Further tuning can be applied using the PID settings, by changing a series of parameters within the Danfoss drive. This requires a Danfoss display terminal and the lock code. These changes should only be completed with specific guidance from Aqua Cooling Solutions Ltd.

1.4.3.2 Temperature control

Note:

Temperature control is available as an option for all systems.

Temperature control is achieved by means of a control valve and speed-controlled pumps.

Temperature control using a control valve can be by either a two-port, or three-port control valve. The control point used is the data center supply temperature. The control loop can be tuned using the on-board PID settings. These can be found in the control menu.

Speed-controlled pumps are used when the recirculation pumps have been selected. The amount of water being circulated around the heat exchanger is proportional to the supply temperature of water going to the data centre. One temperature probe per speed controlled pump is required in the system. The probe is wired directly to the inverter. The set point of the system can be changed using the microprocessor control. Further tuning can be applied using the PID settings, by changing a series of parameters within the Danfoss drive. This requires a Danfoss display terminal and the lock code. These changes should only be completed with specific guidance from Aqua Cooling Solutions Ltd.

Both control types are compatible with the Coldlogik Call for Help system.

1.4.3.3 Leak alarm

Air is expelled through the top of the air separator, on top of which sits an air sensor and a solenoid valve. The air sensor monitors for air. The system is programmed to purge gases periodically, because degassing does occur from the process water. The amount of air expelled is measured, to determine if there is a leak.

If a small leak occurs, the measuring and venting process can happen a few times in short succession and is alarmed as a possible leak.

If a large leak occurs, then the system can end up venting continuously. This is also alarmed and reported as a continual fault.

1.5 Water quality

We always recommend the use of glycol antifreeze solution in chilled water and cooling systems.

Note:

Refrigerant typically evaporates at 7°C below the chiller set point, so freeze risks can occur at 7°C in no-flow conditions. The correct choice of anti-freeze will give protection against costly winter freeze events, as well as aid long-term equipment life.

Our warranty does not provide cover for frost damage due to incorrect or insufficient chemical frost protection being applied.

Aqua Cooling Solutions Ltd. can provide glycol antifreeze solution, should it be required.

2

Installation

2.1 Inspection

A thorough inspection of the equipment, including all component parts and accessories, should be made immediately upon delivery. Any damage caused in transit, or missing parts, should be reported to the carrier at once. The consignee is responsible for making any claim for losses or damage.

The following sections contain a set of checklists that you can use for your convenience. The Notes column in each checklist, where blank, is for your own use, if required.

2.1.1 Inspection checklist

Item	Checked	Notes
Delivery inspection		When you take delivery of the equipment, check its condition immediately. Report any damage to the transport company at once.
Check components against shipping list		Any missing items should be reported immediately to Aqua Cooling Solutions Ltd.

2.2 Lifting instructions

The LPS is a large, heavy unit and must be handled as such. A fully qualified and properly equipped crew with necessary rigging should be engaged to set the unit in position. Bear in mind the following guidelines:

- Always keep the unit vertically upright and do not leave it out in the open.
- Before carrying out any handling operation, ensure that the lifting capacity is commensurate to the weight of the unit [refer to Table 1].
- If possible, transport the unit using a fork lift truck; otherwise use a crane with belts or cables. When you use a crane for the larger LPS units, use suitable spreader bars.
- Do not use chains on the lower part as this can cause damage to the unit.
- Avoid pressure on the top edges of the packing.
- Do not stack the units on top of each other.

Job-specific lifting plans are available on request.

2.3 Environment

Before handling and placing the unit into position a review of the most suitable location must be made. Several factors must be taken into consideration when selecting a location.

2.3.1 Installation area

The installation area must provide adequate free space around the unit, to allow for access and airflow. The following table provides the dimensions and weight of the LPS units, and the recommended minimum clearance around each side.

LPS unit dimensions

LPS	Width in (mm)	Depth in (mm)	Height in (mm)	Weight lb (kg)	Clearance in (mm)
50	31.4 (797)	49.5 (1256)	68.4 (1738)	1078 (490)	40 (1015)
100	31.4 (797)	50.4 (1280)	75.1(1908)	tba	40 (1015)
150	37.6 (956)	105.8 (2688)	63 (1600)	tba	40 (1015)
200	51.4 (1306)	127.2 (3231)	70.9(1801)	tba	40 (1015)
300	tba	tba	tba	tba	40 (1015)
400	tba	tba	tba	tba	40 (1015)
500	200.8 (5100)	66.9 (1700)	103.1 (2620)	4409 (2004)	40 (1015)

2.3.2 Environment checklist

Item	Checked	Notes
Accessibility		<p>There should be a minimum of 40" (1.0m) free space around the perimeter of the LPS to allow for general access.</p> <p>Consideration should also be given to access for maintenance, for example, lifting equipment might be required if large components need to be moved.</p>
Loading capacity of the roof, floor or deck.		Refer to the preceding installation area table of weights and dimensions.
Check that local building codes are fully satisfied.		
Effect of noise levels on adjacent buildings.		The LPS units are large mechanical units, and some noise and vibration during operation is unavoidable.
Check the location of a suitable drain for heat exchanger and pump maintenance.		
Ensure adequate provision of the cooling supply and return, and required filtration.		

2.4 Mechanical considerations

Piping practices vary considerably in accordance with local standards and regulations. When selecting and installing piping, local building and safety codes as well as regulations should be studied and complied with.

The following information should be taken as advice to prevent the unit from being damaged but it is not comprehensive:

- Design the piping carefully, paying attention to the corresponding cross sections of the pipes to avoid unnecessary pressure losses. For example, using a brine solution (glycol/water) increases the flow volume and so causes a pressure drop in the system.
- Water piping connections to the unit should be flexible. Tube compensators effectively prevent noise and vibration being transmitted between pipes and components in the system.

- Use strainer filters on the system pump section to protect the pump and hybrid coil against foreign matter.
- Design the piping so that it has a minimum number of elbows, bends and changes in elevation.

2.4.1 Mechanical schematic

TO BE SUPPLIED BY GERALD TUDGEY. IMAGE SHOULD SHOW DETAIL RELEVANT TO THE CONSIDERATIONS LISTED.

2.4.2 Mechanical checklist

Item	Checked	Notes
Provide shut-off or butterfly valves on the unit.		This enables you to carry out routine servicing without draining the system.
Install temperature and pressure gauges at the inlet and outlet of the heat exchangers.		These gauges make checking easier and can be read by non-specialists.
Include automatic air vent valves (quick-action type) at the high points of the chilled water piping.		These valves enable you to vent air from the water circuit.

2.5 Electrical requirements

2.5.1 Electrical schematic

For the electrical system details, refer to Appendix D.

2.5.2 Electrical checklist

Item	Checked	Notes
Items required		

2.6 Post-installation checks

MODIFY THIS LIST FOR THE LPS 500. As a final check on the installation, ensure that you perform these post-installation checks.

Installation and Maintenance Guide

Item	Checked	Notes
Verify that all installation checklists have been completed.		
Ensure commissioning area is clean and safe.		
Check alignment and tightness of fastenings and fixings.		
Ensure all air intakes are free of any debris.		
Ensure all fixing screws are in place, replace where necessary.		

3

Commissioning

3.1 Introduction

The purpose of commissioning is to ensure the equipment is properly installed, there are no missing parts or components and the equipment operates correctly.

3.2 Commissioning method

The following sections specify a recommended commissioning schedule for the LPS. For further details of any step in this schedule, contact Aqua Cooling Solutions Ltd.

I THINK we need some notes on many of the items in the 3.2.x sections. Feel free to contribute!

3.2.1 Unit checklist

The following items must be checked for each LPS in your system.

Item	Checked	Notes
Conduct visual checks		
Check proper wiring of all components		In particular, check all cables and insulation for any signs of wear or damage.
Check for proper wiring to electrical panel		
Check for tightness at all terminal points		
Check earth bonding		
Turn on power, single disconnect or circuit breaker at a time, checking for proper voltage		Check mains voltage and outputs of all voltage power supplies / converters to assure correct output.
Check and record all component running currents.		

3.2.2 Control panel and microprocessor checklist

The following items must be checked for the PGDT13 Touch control panel.

Item	Checked	Notes
Check all electrical terminations.		
Check and calibrate all temperature and pressure		

measurements.		
Check and calibrate all temperature set points.		
Check correct panel operation		
Check that illuminated inputs and outputs are correct		

3.2.3 System checklist

The following items must be checked on the system.

Item	Checked	Notes
Pressure test to bypass loop..		The test can be done with gas or water.
Fill system to bypass loop..		
Flush and refill the system.		
Isolate the piping only after a preliminary leak check.		
Check pump rotations on each LPS		
Check pressure drops on the heat exchanger.		
Ensure that the water circuit has the correct pressure using either an appropriate expansion tank or pressure gauge.		
Perform a functional test.		

4

Maintenance and servicing

4.1 Introduction

Important

Failure to comply with the manufacturer's installation instructions could affect the reliability and performance of the unit and invalidate the warranty.

Warranty is also subject to the implementation of a planned service/maintenance agreement, as stipulated in the warranty booklet supplied with the unit and/or the sales contract

It is important that equipment and products which have been installed and commissioned by Aqua Cooling Solutions Ltd. are maintained by or under supervision of technical competent personnel and that all work is carried out in accordance with good engineering practice and strict adherence to the following:

- EE regulations
- Codes of good engineering practice
- Supply authorities
- Statutory requirements
- Manufacturer instructions and recommendations
- All other relevant information, regulations and legislation.

4.2 Service parts

Service parts must be of the same specification as those being renewed and should only be obtained from Aqua Cooling Solutions Ltd..

Note

The use of incorrect service parts can affect the unit operation and reliability and invalidate any warranty.

We recommend that the following spare parts be kept, as a minimum, on site for each LPSunit, to ensure continuity of operation.

Mechanical spare parts

Item	Quantity
Pump Motive	1
Bearings for motive pump	1
Seal for recirculating pump	1
Bearings set for recirculating pump	1
Solenoid -	1
Pressure Transducer -	5
Temperature Probe -	1

Installation and Maintenance Guide

Vibrating Level Switch -	1
4" Dial, 3/8" Bottom Entry, 0-7 Bar/Psi	5 (optional)
4" Dial, 3/8" Bottom Entry,-1+2 Bar/Psi	2 (optional)
4" Dial, Bottom Entry, -30+60°C/F, All Stainless Steel, C/w 4" Stainless Steel Pocket	3 (optional)
Aerosol paint for skid	1

Electrical spare parts

Item	Quantity
Controller	1
20A fuse	6
40A fuse	6
4A 1-pole AC circuit breakers C curve	2
SZ standard light 14W 120V/60HZ with door-operated switch	1
6A 1-pole AC circuit breakers C curve	2
ESSENTIAL: Power supply. 5A. Input 85...264V AC. Output 24V DC	2
6A 1-pole DC circuit breakers C curve	2
24V AC/DC LED module - green	2
24V AC/DC LED module - red	2
24V AC/DC LED module - white	2
24...120V AC/DC LED module	2
15.0kW IP55 Danfoss drive	1
4.0kW IP55 Danfoss drive	1
3-position selector switch	2
Changeover relay. 2CO. 10A. 24V DC	2
NO contact block	2
WAS5 CCC 2OLP signal splitter - 4-20mA	2

4.2.1 Maintenance contracts

Please contact Aqua Cooling Solutions Ltd. for more details on preventative maintenance contracts.

5

Warranty

Important

Failure to comply with the manufacturer's installation instructions could affect the reliability and performance of the unit and invalidate the warranty.

Warranty is also subject to the implementation of a planned service/maintenance agreement as stipulated in the warranty booklet supplied with the unit and/or the sales contract

5.1 Quality assurance

All equipment and products supplied by Aqua Cooling Solutions Ltd. are manufactured in accordance with the respective manufacturer's quality assurance program.

5.2 Warranty statement

Aqua Cooling Ltd warrants that the equipment will be free from defects for a period of 12 months from the date of start-up, or within 18 months from the date of dispatch from manufacturing facility/factory, whichever is the sooner. This is for UK Only Sites, with 12 months Parts only warranty outside the UK.

By start-up we mean the initial starting up of the equipment, which is not necessarily the same as commissioning or practical completion. When Aqua Cooling Ltd service engineers carry out the unit start-up, the warranty period is inclusive of non-consumable parts and labour. However, this cover excludes the cost of consumable items (filters, belts, refrigerant gas etc.) and any repairs or replacements required following incorrect operation of the equipment by reference to manufacturers operation and maintenance manuals. We will not replace or repair any installation work unless the installation is carried out by Aqua Cooling Ltd. We do not accept responsibility for other connected services including water supplies, condensate drains or electrical supplies. For 'Supply Only' contracts where the start-up is undertaken by others, the warranty period covers the supply only of non-consumable parts only, with labour specifically excluded.

Please note that the warranty and reliable operation is subject to a regular and professional maintenance regime throughout the life of the supplied equipment. Aqua Cooling Ltd would be pleased to offer a service and maintenance contract that is suitable for this equipment, which has the advantage of a 24 hour/365 day emergency call-out facility.

Warranty can be extended to 24 months, subject to a standard maintenance contract being entered into with Aqua Cooling Ltd within 3 months from the date of start-up. The Aqua Cooling Ltd service team undertakes to carry out all warranty work as soon as possible, Monday to Friday during normal business hours.

5.3 Warranty details

Equipment Detail:

Model Number	Serial Number	Description

The above equipment has been installed and commissioned in accordance to the manufacturer's specification on the date found below.

Commissioning Engineer's Signature: _____

Commissioning Engineer's Name (Print): _____

Date: _____

Warranty Details: 12 Months Parts Only Warranty

Warranty Start Date: _____

Warranty End Date: _____

WARRANTY

Please refer to the Limitation of the Warranty applicable to and in effect at the time of the sale/purchase of this product.

A

LPS variables

The following tables show the variables available for each LPS unit. If you have appropriate system privileges on the LPS monitor, you can edit the variables identified as read/write (R/W).

For information about editing variables, refer to **Error! Reference source not found.**, on page **Error! Bookmark not defined..**

Note:

The variables shown shaded in grey are those visible in the PGDT13 Touch screen. Refer to **Error! Reference source not found.**, on page **Error! Bookmark not defined..**

QUESTIONS:

1. Is there any point in documenting the variables that cannot be edited?
2. If we document non-editable variables, do you agree that it would be better for users if we separate out the editable and non-editable variables?
3. I think it would be more user-friendly to organise the variables into groups relevant to the system, along the lines of how they are grouped in the user interface. If you agree, can you help me with the categories? I would envisage something like the following, with each category showing all types – integer, real, digital:
 - Global/system-wide (date/time etc)
 - Data center
 - LPS unit groups (inlet/outlet, heat exchanger etc)

Analog variables:

BMS Address	Variable name	Description	Read/ Write	Default	Min	Max	Unit
1	Chiller_Flow_Temp_Msk	Chiller flow temperature	R	0	-99.9	99.9	°C/°F
2	Chiller_Return_Temp_Msk	Chiller return temperature	R	0	-99.9	99.9	°C/°F
3	DataCentre_Flow_Press_1_Msk	Data Centre flow pressure 1 (2dec)	R	0	-1000	1000	BAR/PSI
4	DataCentre_Flow_Press_2_Msk	Data center flow pressure 2 (2dec)	R	0	-1000	1000	BAR/PSI
5	DataCentre_Flow_Temp_Msk	Data center flow temperature	R	0	-99.9	99.9	°C/°F
6	DataCentre_Return_Temp_Msk	Data center return temperature	R	0	-99.9	99.9	°C/°F
7	Negative_Suction_Press_1_Msk	Negative suction pressure 1	R	0	-99.9	99.9	BAR/PSI
8	Negative_Suction_Press_2_Msk	Negative suction pressure 2	R	0	-99.9	99.9	BAR/PSI

B

LPS unit main components

The appearance and main components of an LPS unit depend on the model. The following diagrams illustrate the main components for the standard LPS units.

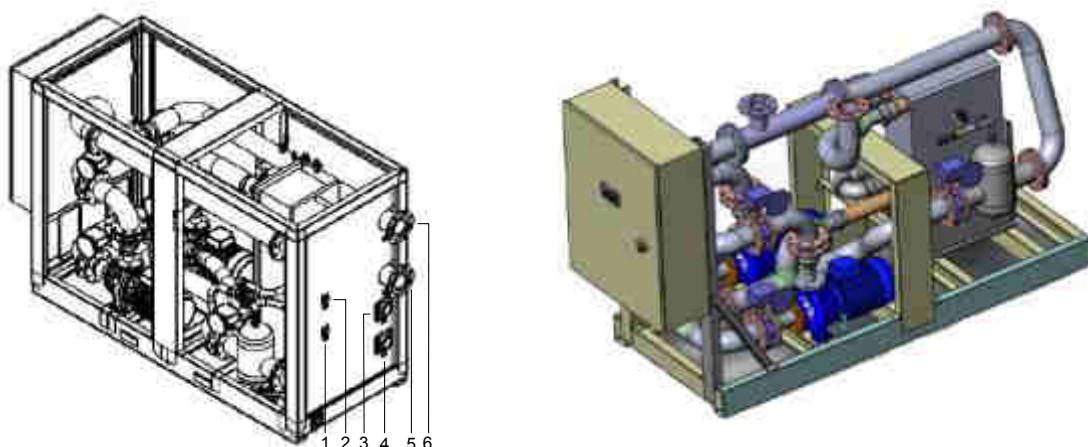

LPS 500

Item	Description
1	Cooling inlet 6"
2	Cooling outlet 6"
3	Recirculation hot inlet 6"
4	Recirculation cold outlet 6"
5	Motive hot inlet 8"
6	Motive hot outlet 10"

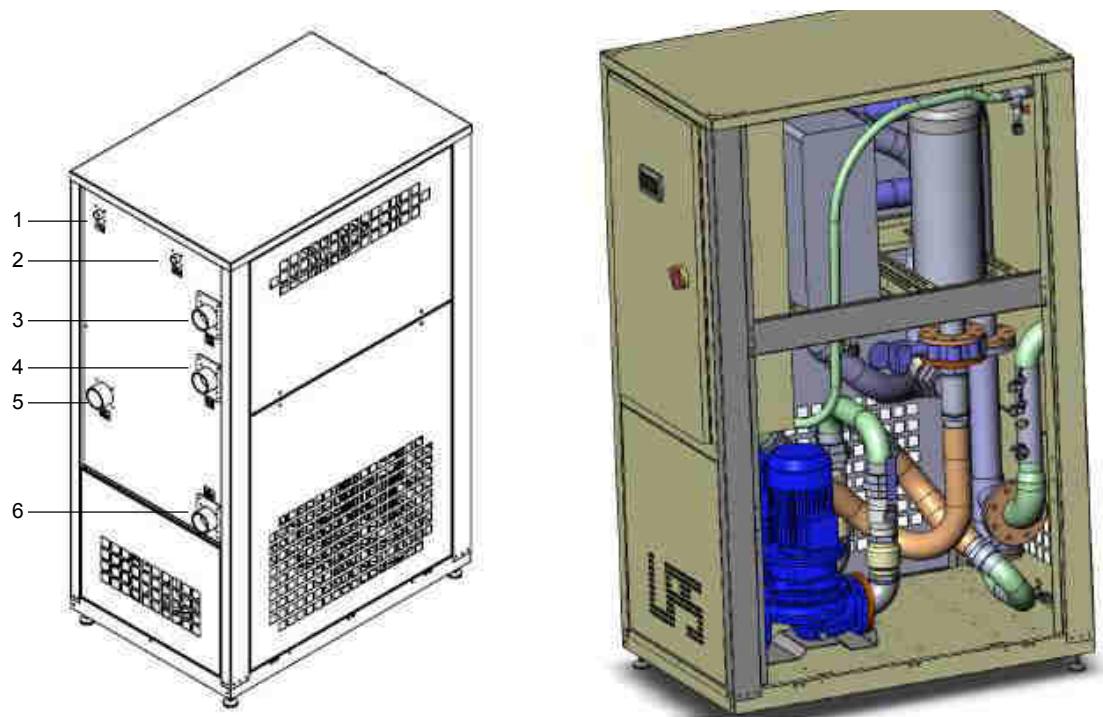

Item	Description
7	Main unit control panel
8	Motive pump isolator
9	Motive pump inverter
10	Recirculating pump inverter
11	Recirculating pump isolator
12	Lifting support angle

LPS 150

Item	Description
1	Unit fill
2	Air outlet
3	Cooling inlet
4	Cooling outlet
5	Data center outlet
6	Data center inlet

LPS 100

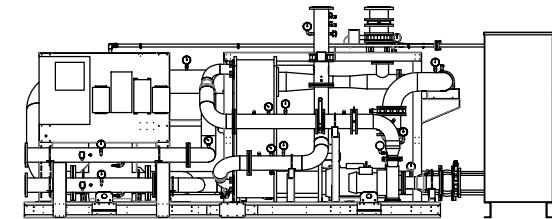

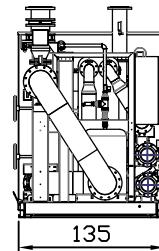

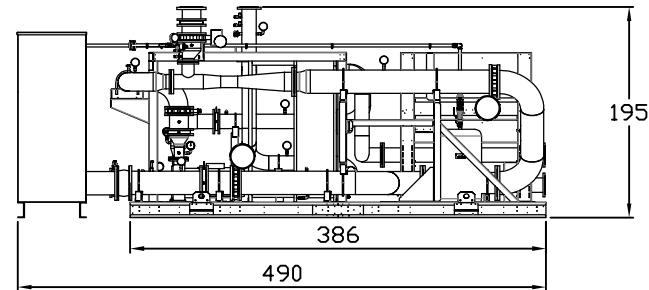

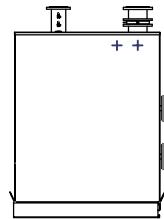

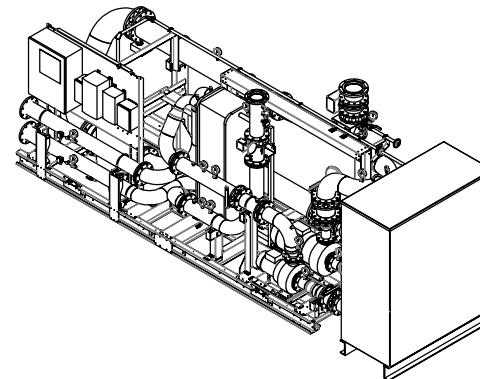

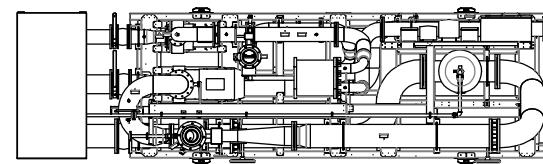

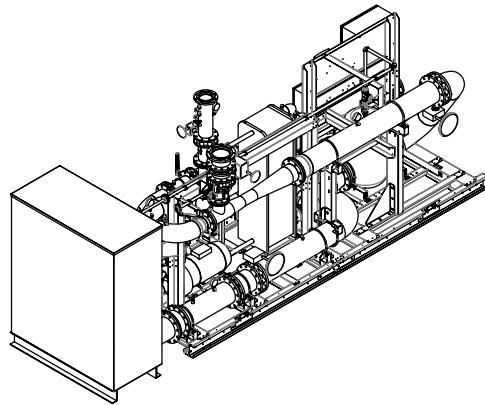

Item	Description
1	Unit fill
2	Air outlet
3	Cooling outlet
4	Cooling inlet
5	Data center inlet
6	Data center outlet

C

General arrangement

The following diagram shows the general arrangement of the pressurisation pump.

Causa	Soluzione
I cuscinetti del motore sono usurati.	Rivolgersi al rappresentante di vendita e assistenza di zona.
Presenza di corpi estranei	Rivolgersi al rappresentante di vendita e assistenza di zona.

Causa	Soluzione
all'interno della pompa.	
Il girante striscia contro l'anello di usura	Rivolgersi al rappresentante di vendita e assistenza di zona.

Per ogni situazione non contemplata, fare riferimento al rappresentante di vendita e assistenza di zona.

1 Introduction and Safety

1.1 Introduction

Purpose of this manual

The purpose of this manual is to provide necessary information for:

- Installation
- Operation
- Maintenance

CAUTION:

Read this manual carefully before installing and using the product. Improper use of the product can cause personal injury and damage to property, and may void the warranty.

NOTICE:

Save this manual for future reference, and keep it readily available at the location of the unit.

1.1.1 Inexperienced users

WARNING:

This product is intended to be operated by qualified personnel only.

Be aware of the following precautions:

- This product is not to be used by anyone with physical or mental disabilities, or anyone without the relevant experience and knowledge, unless they have received instructions on using the equipment and on the associated risks or are supervised by a responsible person.
- Children must be supervised to ensure that they do not play on or around the product.

1.2 Safety terminology and symbols

About safety messages

It is extremely important that you read, understand, and follow the safety messages and regulations carefully before handling the product. They are published to help prevent these hazards:

- Personal accidents and health problems
- Damage to the product and its surroundings
- Product malfunction

Hazard levels

Hazard level	Indication
DANGER:	A hazardous situation which, if not avoided, will result in death or serious injury
WARNING:	A hazardous situation which, if not avoided, could result in death or serious injury
CAUTION:	A hazardous situation which, if not avoided, could result in minor or moderate injury
NOTICE:	Notices are used when there is a risk of equipment damage or decreased performance, but not personal injury.

Special symbols

Some hazard categories have specific symbols, as shown in the following table.

Electrical hazard	Magnetic fields hazard
Electrical Hazard:	CAUTION:

Hot surface hazard

Hot surface hazards are indicated by a specific symbol that replaces the typical hazard level symbols:

CAUTION:

Description of user and installer symbols

	Specific information for personnel in charge of installing the product in the system (plumbing and/or electrical aspects) or in charge of maintenance.
	Specific information for users of the product.

Instructions

The instructions and warnings that are provided in this manual concern the standard version, as descri-

bed in the sales document. Special version pumps may be supplied with supplementary instruction leaflets. Refer to sales contract for any modifications or special version characteristics. For instructions, situations, or events that is not considered in this manual or the sales document, contact the nearest Service Center.

1.3 Disposal of packaging and product

Observe the local regulations and codes in force regarding sorted waste disposal.

1.4 Warranty

For information about warranty, see the sales contract.

1.5 Spare parts

WARNING:

Only use original spare parts to replace any worn or faulty components. The use of unsuitable spare parts may cause malfunctions, damage, and injuries as well as void the guarantee.

CAUTION:

Always specify the exact product type and part number when requesting technical information or spare parts from the Sales and Service Department.

For more information about the product's spare parts, visit sales network's website.

1.6 DECLARATIONS OF CONFORMITY

1.6.1 EC Declaration of Conformity (Original)

Xylem Service Italia S.r.l., with headquarters in Via Vittorio Lombardi 14 - 36075 Montecchio Maggiore VI - Italy, hereby declares that the product:

Electric pump unit (see label on first page)

fulfills the relevant provisions of the following European directives:

- Machinery 2006/42/EC (ANNEX II - natural or legal person authorised to compile the technical file: Xylem Service Italia S.r.l.)
- Eco-design 2009/125/EC, Regulation (EC) No 640/2009 & Regulation (EU) No 4/2014 (Motor 3 ~, 50 Hz, PN ≥ 0,75 kW) if IE2 or IE3 marked, Regulation (EU) No 547/2012 (Water pump) if MEI marked

and the following technical standards

- EN ISO 12100:2010, EN 809:1998+A1:2009, EN 60204-1:2006+A1:2009
- EN 60034-30:2009, EN 60034-30-1:2014

Montecchio Maggiore, 11.03.2016

Amedeo Valente
(Director of Engineering and R&D)
rev.01

1.6.2 EU Declaration of Conformity (No EMCD01)

1. Apparatus model/Product:

see label on first page

2. Name and address of the manufacturer:

Xylem Service Italia S.r.l.

Via Vittorio Lombardi 14

36075 Montecchio Maggiore VI

Italy

3. This declaration of conformity is issued under the sole responsibility of the manufacturer.

4. Object of the declaration:

electric pump

5. The object of the declaration described above is in conformity with the relevant Union harmonisation legislation:

Directive 2014/30/EU of 26 February 2014 (electromagnetic compatibility)

6. References to the relevant harmonised standards used or references to the other technical specifications, in relation to which conformity is declared:

EN 61000-6-1:2007, EN 61000-6-3:2007 +A1:2011

7. Notified body: -

8. Additional information: -

Signed for and on behalf of:

Xylem Service Italia S.r.l.

Montecchio Maggiore, 11.03.2016

Amedeo Valente

(Director of Engineering and R&D)

rev.01

Lowara is a trademark of Xylem Inc. or one of its subsidiaries.

2 Transportation and Storage

2.1 Inspect the delivery

1. Check the outside of the package for evident signs of damage.
2. Notify our distributor within eight days of the delivery date, if the product bears visible signs of damage.

Unpack the unit

1. Follow applicable step:
 - If the unit is packed in a carton, then remove the staples and open the carton.
 - If the unit is packed in a wooden crate, then open the cover while paying attention to the nails and straps.
2. Remove the securing screws or the straps from the wooden base.

2.1.1 Inspect the unit

1. Remove packing materials from the product. Dispose of all packing materials in accordance with local regulations.
2. Inspect the product to determine if any parts have been damaged or are missing.

3. If applicable, unfasten the product by removing any screws, bolts, or straps.
For your personal safety, be careful when you handle nails and straps.
4. Contact the local sales representative if there is any issue.

2.2 Transportation guidelines

Precautions

WARNING:

- Observe accident prevention regulations in force.
- Crush hazard. The unit and the components can be heavy. Use proper lifting methods and wear steel-toed shoes at all times.

Check the gross weight that is indicated on the package in order to select proper lifting equipment.

Position and fastening

The pump or pump unit can be transported only horizontally. Make sure that the pump or pump unit is securely fastened during transportation and cannot roll or fall over.

WARNING:

Do not use eyebolts screwed on the motor for handling the whole electric pump unit.

Do not use the shaft end of the pump or of the motor to handle the pump, the motor or the unit.

- Eyebolts screwed onto the motor may be exclusively used to handle the individual motor or, in case of a not balanced distribution of weights, to partially lift the unit vertically starting from a horizontal displacement.

Pump unit must always be fixed and transported as shown in *Figure 5* (page 333), and the pump without motor must be fixed and transported as shown in *Figure 6* (page 333).

In this last case remove coupling guards from drive lantern and cross the lifting ropes/bands.

2.3 Storage guidelines

Storage location

The product must be stored in a covered and dry location free from heat, dirt, and vibrations.

NOTICE:

Protect the product against humidity, heat sources, and mechanical damage.

NOTICE:

Do not place heavy weights on the packed product.

2.3.1 Long-term storage

If the unit is stored for more than 6 months, these requirements apply:

- Store in a covered and dry location.
- Store the unit free from heat, dirt, and vibrations.
- Rotate the shaft by hand several times at least every three months.

For questions about possible long-term storage treatment services, please contact your local sales and service representative.

Ambient temperature

The product must be stored at an ambient temperature from -5°C to +40°C (23°F to 104°F).

3 Product Description

3.1 Pump design

The pump is a horizontal pump with volute casing close coupled to standard electric motors.

The pump can be used for handling:

- Cold or warm water
- Clean liquids
- Liquids which are not chemically and mechanically aggressive to the pump materials.

Intended use

The pump is suitable for:

- Water supply and water treatment
- Cooling and hot water supply in industries and building services
- Irrigation and sprinkler systems
- Heating systems

Additional uses for optional material:

- District heating
- General industry

Improper use

WARNING:

Improper use of the pump may create dangerous conditions and cause personal injury and damage to property.

An improper use of the product leads to the loss of the warranty.

Examples of improper use:

- Liquids not compatible with the pump construction materials
- Hazardous liquids (such as toxic, explosive, flammable, or corrosive liquids)
- Potable liquids other than water (for example, wine or milk)

Examples of improper installation:

- Hazardous locations (such as explosive, or corrosive atmospheres).
- Location where the air temperature is very high or there is poor ventilation.
- Outdoor installations where there is no protection against rain or freezing temperatures.

DANGER:

Do not use this pump to handle flammable and/or explosive liquids.

NOTICE:

- Do not use this pump to handle liquids containing abrasive, solid, or fibrous substances.
- Do not use the pump for flow rates beyond the specified flow rates on the data plate.

Special applications

Contact the local sales and service representative in the following cases:

- If the density and/or viscosity value of the pumped liquid exceeds the value of water, such as water with glycol; as it may require a more powerful motor.
- If the pumped liquid is chemically treated (for example softened, deionized, demineralized etc.).
- Any situation that is different from the ones that is described and relate to the nature of the liquid.

3.2 Pump denomination

See [Figure 2](#) (page 318) for an explanation of the denomination code for the pump and one example.

3.3 Nameplate

The nameplate is a metal label that is located on the pump body or on drive lantern depending on model. The name plate lists key product specifications. For more information, see [Figure 1](#) (page 313).

The nameplate provides information regarding the impeller and casing material, the mechanical seal and their materials. For more information, see [Figure 3](#) (page 328).

IMQ or TUV or IRAM or other marks (for electric pump only)

Unless otherwise specified, for products with a mark of electrical-related safety approval, the approval refers exclusively to the electrical pump.

3.4 Pump description

- Connection dimensions according EN 733 (models 32-125...-200; 40-125...-250; 50-125...-250; 65-125...-315; 80-160...-315; 100-200...-400; 125-250...-400; 150-315...-400).
- Volute casing pump with back pull out power end.

3.5 Material

The metallic parts of the pump that come in contact with water are made of the following:

Material code	Material casting / impeller	Standard/Optional
CC	Cast iron/Cast iron	Standard
CB	Cast iron/Bronze	Standard
CS	Cast iron/Stainless steel	Standard
CN	Cast iron/Stainless steel	Standard
DC	Ductil iron / Cast iron	Standard
DB	Ductil iron / Bronze	Standard

Material code	Material casting / impeller	Standard/Optional
DN	Ductil iron / Stainless steel	Standard
NN	Stainless steel / Stainless steel	Standard
RR	Duplex/Duplex	Opzional

3.6 Mechanical seal

Unbalanced single mechanical seal acc. EN 12756, version K.

3.7 Application limits

Maximum working pressure

[Figure 4](#) (page 332) shows the maximum working pressure depending on the pump model and the temperature of the pumped liquid.

$$P_{1\max} + P_{\max} \leq PN$$

$P_{1\max}$ Maximum inlet pressure

P_{\max} Maximum pressure generated by the pump

PN Maximum operating pressure

Liquid temperature intervals

[Figure 4](#) (page 332) shows the working temperature ranges.

For special requirements, contact the Sales and Service Department.

Maximum number of starts per hour

kW	0.25	4.00	11	18.5	30	45	90
-	-	-	-	-	-	-	-
3.00	7.50	15	22	37	75	160	
Starts per hour	60	40	30	24	16	8	4

Noise level

For the sound pressure levels of pump equipped with standard supplied motor, see [Table 7](#) (page 333).

4 Installation

Precautions

WARNING:

- Observe accident prevention regulations in force.
- Use suitable equipment and protection.
- Always refer to the local and/or national regulations, legislation, and codes in force regarding the selection of the installation site, plumbing, and power connections.

Electrical Hazard:

- Make sure that all connections are performed by qualified installation

technicians and in compliance with the regulations in force.

- Before starting work on the unit, make sure that the unit and the control panel are isolated from the power supply and cannot be energized. This applies to the control circuit as well.

Grounding (earthing)

Electrical Hazard:

- Always connect the external protection conductor to ground (earth) terminal before making other electrical connections.
- You must ground (earth) all electrical equipment. This applies to the pump equipment, the driver, and any monitoring equipment. Test the ground (earth) lead to verify that it is connected correctly.
- If the motor cable is jerked loose by mistake, the ground (earth) conductor should be the last conductor to come loose from its terminal. Make sure that the ground (earth) conductor is longer than the phase conductors. This applies to both ends of the motor cable.
- Add additional protection against lethal shock. Install a high-sensitivity differential switch (30 mA) [residual current device RCD].

4.1 Facility requirements

4.1.1 Pump location

DANGER:

Do not use this unit in environments that may contain flammable/explosive or chemically aggressive gases or powders.

Guidelines

Observe the following guidelines regarding the location of the product:

- Make sure that no obstructions hinder the normal flow of the cooling air that is delivered by the motor fan.
- Make sure that the installation area is protected from any fluid leaks, or flooding.
- If possible, place the pump slightly higher than the floor level.
- The ambient temperature must be between 0°C (+32°F) and +40°C (+104°F).
- The relative humidity of the ambient air must be less than 50% at +40°C (+104°F).
- Contact the Sales and Service Department if:
 - The relative air humidity conditions exceed the guidelines.
 - The room temperature exceeds +40°C (+104°F).
 - The unit is located more than 1000 m (3000 ft) above the sea level. The motor performance may need to be de-rated or replaced with a more powerful motor.

For information about which value to de-rate the motor with, see [Table 8](#) (page 337).

Pump positions and clearance

Provide adequate light and clearance around the pump. Make sure that it is easily accessible for installation and maintenance operations.

Installation above liquid source (suction lift)

The theoretical maximum suction height of any pump is 10.33m. In practice, the following affect the suction capacity of the pump:

- Temperature of the liquid
- Elevation above the sea level (in an open system)
- System pressure (in a closed system)
- Resistance of the pipes
- Own intrinsic flow resistance of the pump
- Height differences

The following equation is used to calculate the maximum height above the liquid level which the pump can be installed:

$$(p_b * 10.2 - Z) \geq NPSH + H_f + H_v + 0.5$$

p_b Barometric pressure in bar (in closed system is system pressure)

NPSH Value in meter of the pump intrinsic flow resistance

H_f Total losses in meters caused by passage of liquid in the suction pipe of the pump

H_v Steam pressure in meters that correspond to the temperature of the liquid T °C

0.5 Recommended safety margin (m)

Z Maximum height at which the pump can be installed (m)

($p_b * 10.2 - Z$) must always be a positive number.

For more information, see [Figure 9](#) (page 337).

NOTICE:

Do not exceed the pumps suction capacity as this could cause cavitation and damage the pump.

4.1.2 Piping requirements

Precautions

WARNING:

- Use pipes suited to the maximum working pressure of the pump. Failure to do so can cause the system to rupture, with the risk of injury.
- Make sure that all connections are performed by qualified installation technicians and in compliance with the regulations in force.

NOTICE:

Observe all regulations issued by authorities having jurisdiction and by companies managing the public water supplies if the pump is connected to a public water system. If required, install appropriate back-flow-prevention device on the suction side.

Piping checklist

Check that the following requirements are met:

- All piping is independently supported, piping must not place a burden on the unit.
- Flexible pipes or unions are used, in order to avoid transmission of pump vibrations to the pipes and vice versa.
- Use wide bends, avoid using elbows which cause excessive flow resistance.
- The suction piping is perfectly sealed and airtight.
- If the pump is used in an open circuit, then the diameter of the suction pipe is suited to the installation conditions. The suction pipe must not be smaller than the diameter of the suction port.
- If the suction piping must be larger than the suction side of the pump, then an eccentric pipe reducer is installed.
- If the pump is placed above liquid level, a foot valve is installed at the end of the suction piping.
- The foot valve is fully immersed into the liquid so that air cannot enter through the suction vortex, when the liquid is at the minimum level and the pump is installed above the liquid source.
- Appropriately sized on-off valves are installed on the suction piping and on the delivery piping (downstream to the check valve) for regulation of the pump capacity, for pump inspection, and for maintenance.
- Appropriately sized on-off valve is installed on the delivery piping (downstream to the check valve) for regulation of the pump capacity, for pump inspection, and for maintenance.
- In order to prevent back flow into the pump when pump is turned off a check valve is installed on the delivery piping.

WARNING:

Do not use the on-off valve on the discharge side in the closed position in order to throttle the pump for more than a few seconds. If the pump must operate with the discharge side closed for more than a few seconds, a bypass circuit must be installed to prevent overheating of the liquid inside the pump.

For illustrations that show the piping requirements, see [Figure 10](#) (page 338) and [Figure 11](#) (page 338).

4.2 Electrical requirements

- The local regulations in force overrule these specified requirements.
- In the case of fire fighting systems (hydrants and/or sprinklers), check the local regulations in force.

Electrical connection checklist

Check that the following requirements are met:

- The electrical leads are protected from high temperature, vibrations, and collisions.
- The power supply line is provided with:
 - A short-circuit protection device
 - A mains isolator switch with a contact gap of at least 3 mm

The electrical control panel checklist

NOTICE:

The control panel must match the ratings of the electric pump. Improper combinations could fail to guarantee the protection of the motor.

Check that the following requirements are met:

- The control panel must protect the motor against overload and short-circuit.
- Install the correct overload protection (thermal relay or motor protector).

Pump Type	Protection
Single phase standard electric pump $\leq 2.2 \text{ kW}$	<ul style="list-style-type: none"> – Built-in automatic reset thermal-amperelectric protection (motor protector) – Short circuit protection (must be supplied by the installer)³
Three phase electric pump ⁴	<ul style="list-style-type: none"> – Thermal protection (must be supplied by the installer) – Short circuit protection (must be supplied by the installer)

- The control panel must be equipped with a dry-running protection system to which a pressure switch, float switch, probes, or other suitable device is connected.
- The following devices are recommended for use on the suction side of the pump:
 - When the liquid is pumped from a water system, use a pressure switch.
 - When the liquid is pumped from a storage tank or reservoir, use a float switch or probes.
- When thermal relays are used, relays that are sensitive to phase failure are recommended.

The motor checklist

**WARNING:**

- Read the operating instructions in order to ensure whether a protection device is provided if another motor other than the standard is used.
- If the motor is equipped with automatic thermal protectors, be aware of the risk of unexpected starts in connection to overload. Do not use such motors for fire-fighting applications.

NOTICE:

- Only use dynamically balanced motors with a half-sized key in the shaft extension (IEC 60034-14) and with normal vibration rate (N).
- The mains voltage and frequency must agree with the specifications on the data plate.

In general, motors can operate under the following mains voltage tolerances:

³ fuses aM (motor starting), or magneto-thermal switch with curve C and $I_{cn} \geq 4,5 \text{ kA}$ or other equivalent device.

⁴ Overload thermal relay with trip class 10A + fuses aM (motor starting) or motor protection magneto-thermal switch with starting class 10A.

Frequency Hz	Phase ~	UN [V] ± %
50	1	220 – 240 ± 6
	3	230/400 ± 10
		400/690 ± 10
60	1	220 – 230 ± 6
	3	220/380 ± 5
		380/660 ± 10

Use cable according to rules with 3 leads (2+earth/ground) for single phase versions and with 4 leads (3+earth/ground) for three phase version.

4.3 Install the pump

4.3.1 Mechanical installation

Check the following before installation:

- Use a concrete of compressive strength class C12/15 which meets the requirements of exposure class XC1 to EN 206-1.
- The mounting surface must have set and must be completely horizontal and even.
- Observe the weights indicated.

Install the pump set

For examples of horizontal and vertical installations, see [Figure 12](#) (page 340).

Check that the foundation has been prepared in accordance with the dimensions given in the outline drawing/general arrangement drawing.

Type	Motor Size	Number of Poles	Type of Fastening
A	Up to 132	2– and 4-pole	Mount on ground using the volatile casing feet.
B	From 160 to 200	2-pole	Mount on ground using the pump and motor feet. Shims are required under the pump and motor feet.
	From 160 to 280	4-pole	
C	250	2-pole	Mount on ground using the pump and motor feet. Shims are required under the pump and motor feet.
D	Up to 132	2– and 4-pole	Mount on ground using the volatile casing feet.

Type	Motor Size	Number of Poles	Type of Fastening
E	From 160 to 280	2– and 4-pole	Mount on ground using the motor feet

1. Position the pump set on the foundation and level it with the help of a spirit level that is placed on the discharge port.

The permissible deviation is 0.2 mm/m.

2. Remove the plugs covering the ports.
3. Align the pump and piping flanges on both sides of the pump. Check the alignment of the bolts.
4. Fasten the piping with bolts to the pump. Do not force the piping into place.
5. Use shims for height compensation, if necessary.
6. Tighten the foundation bolts evenly and firmly.

Note:

- If the transmission of vibrations can be disturbing, provide vibration-damping supports between the pump and the foundation.

4.3.2 Piping checklist

Check that the following are adhered to:

- The suction lift line has been laid with a rising slope, at positive suction head line with a downward slope towards the pump.
- The nominal diameters of the pipelines are at least equal to the nominal diameters of the pump ports.
- The pipelines have been anchored in close proximity to the pump and connected without transmitting any stresses or strains.

CAUTION:

Welding beads, scale and other impurities in the piping damage the pump.

- Free the piping from any impurities.
- If necessary, install a filter.

4.3.3 Electrical installation

1. Remove the screws of the terminal box cover.
2. Connect and fasten the power cables according to the applicable wiring diagram.

For wiring diagrams, see [Figure 13](#) (page 341). The diagrams are also available on the back of the terminal box cover.

- a) Connect the ground (earth) lead.
Make sure that the ground (earth) lead is longer than the phase leads.
- b) Connect the phase leads.
3. Mount the terminal box cover.

NOTICE:

Tighten the cable glands carefully to ensure protection against cable slipping and humidity entering the terminal box.

4. If the motor is not equipped with automatic reset thermal protection, then adjust the overload protection according to the list below.
 - If the motor is used with full load, then set the value to the nominal current value of electric pump (data plate)
 - If the motor is used with partial load, then set the value to the operating current (for example measured with a current pincer).
 - If the pump has a star-delta starting system, then adjust the thermal relay to 58% of the nominal current or operating current (only for three-phase motors).

5 Commissioning, Startup, Operation, and Shutdown

Precautions

WARNING:

- Make sure that the drained liquid does not cause damage or injuries.
- The motor protectors can cause the motor to restart unexpectedly. This could result in serious injury.
- Never operate the pump without the coupling guard correctly installed.

CAUTION:

- The outer surfaces of the pump and motor can exceed 40°C (104°F) during operation. Do not touch with any part of the body without protective gear.
- Do not put any combustible material near the pump.

NOTICE:

- Never operate the pump below the minimum rated flow, when dry, or without prime.
- Never operate the pump with the delivery ON-OFF valve closed for longer than a few seconds.
- Never operate the pump with the suction ON-OFF valve closed.
- Do not expose an idle pump to freezing conditions. Drain all liquid that is inside the pump. Failure to do so can cause liquid to freeze and damage the pump.
- The sum of the pressure on the suction side (mains, gravity tank) and the maximum pressure that is delivered by the pump must not exceed the maximum working pressure that is allowed (nominal pressure PN) for the pump.
- Do not use the pump if cavitation occurs. Cavitation can damage the internal components.

5.1 Fill the pump

For information about additional pump connections, see [Figure 14](#) (page 341).

Installations with liquid level above the pump (suction head)

For an illustration that shows where pump plugs are, see [Figure 15](#) (page 343).

1. Close the on-off valve located downstream from the pump.
2. Remove the fill (3) or gauge plug (1) and open the on/off valve upstream until the water flows out of the hole.
- a) Close the fill (3) or gauge plug (1).

Installations with liquid level below the pump (suction lift)

For an illustration that shows where pump plugs are, see [Figure 16](#) (page 345).

1. All pipe system empty:
- a) Open the on-off valve located upstream from the pump.
- b) Remove the fill plug (3) and the gauge plug (1). Use a funnel to fill the pump through the fill hole until the water flows out of this hole.
- c) Tighten the fill plug (3) and the gauge plug (1).
2. Filled discharge pipe system:
- a) Open the on-off valve located upstream from the pump and open the on-off valve downstream.
- b) Remove the gauge plug (1) until water flows out of this hole.
- c) Tighten the gauge plug (1).

5.2 Check the rotation direction (three-phase motor)

Follow this procedure before start-up.

1. Locate the arrows on the adaptor or the motor fan cover to determine the correct rotation direction.
 2. Start the motor.
 3. Quickly check the direction of rotation through the coupling guard or through the motor fan cover.
 4. Stop the motor.
 5. If the rotation direction is incorrect, then do as follows:
 - a) Disconnect the power supply.
 - b) In the terminal board of the motor or in the electric control panel, exchange the position of two of the three wires of the supply cable.
- For the wiring diagrams, see [Figure 13](#) (page 341).
- c) Check the direction of rotation again.

5.3 Start the pump

The responsibility for checking the correct flow and the temperature of the pumped liquid rests with the installer or owner.

Before starting the pump, make sure that:

- The pump is correctly connected to the power supply.
- The pump is correctly filled according to instructions in [Fill the pump](#) (chapter 5).
- The on-off valve located downstream from the pump is closed.

- Start the motor.
 - Gradually open the on-off valve on the discharge side of the pump.
- At the expected operating conditions, the pump must run smoothly and quietly. If not, refer to **Troubleshooting** (page 21).

6 Maintenance

Precautions

Electrical Hazard:

Disconnect and lock out electrical power before installing or servicing the unit.

WARNING:

- Maintenance and service must be performed by skilled and qualified personnel only.
- Observe accident prevention regulations in force.
- Use suitable equipment and protection.
- Make sure that the drained liquid does not cause damage or injuries.

6.1 Service

If the user wishes to schedule regular maintenance deadlines, they are dependent on the type of pumped liquid and on the operating conditions of the pump.

Contact the local sales and service representative for any requests or information regarding routine maintenance or service.

Extraordinary maintenance may be necessary to clean the liquid end and/or replace worn parts.

Motor bearings

After approximately five years, the grease in the motor bearings is so aged that a replacement of the bearings is recommended. The bearings must be replaced after 25000 operating hours or according to the motor supplier maintenance instructions, whichever is shorter.

Motor with regreasable bearings

Follow motor supplier maintenance instructions.

6.2 Inspection checklist

Check for leakage of the mechanical seal. Replace the mechanical seal if leakage is found.

6.3 Disassemble and replace the pump parts

For more information about spare parts and assembly and disassembly of the pump, contact the local sales and service representative.

7 Troubleshooting

7.1 Troubleshooting for users

The main switch is on, but the electric pump does not start.

Cause	Remedy
The thermal protector incorporated in the pump (if any) has tripped.	Wait until the pump has cooled down. The thermal protector will automatically reset.
The protective device against dry running has tripped.	Check the liquid level in the tank, or the mains pressure.

The electric pump starts, but the thermal protection trips a varying time after.

Cause	Remedy
There are foreign objects (solids or fibrous substances) inside the pump which have jammed the impeller.	Contact the Sales and Service Department.
The pump is overloaded because it is pumping liquid that is too dense and viscous.	Check the actual power requirements based on the characteristics of the pumped liquid and then contact the Sales and Service Department.

The pump runs but delivers too little or no liquid.

Cause	Remedy
The pump is clogged.	Contact the Sales and Service Department.

The troubleshooting instructions in the tables below are for installers only.

7.2 The main switch is on, but the electric pump does not start

Cause	Remedy
There is no power supply.	<ul style="list-style-type: none"> Restore the power supply. Make sure all electrical connections to the power supply are intact.
The thermal protector incorporated in the pump (if any) has tripped.	Wait until the pump has cooled down. The thermal protector will automatically reset.
The thermal relay or motor protector in the electric control panel has tripped.	Reset the thermal protection.
The protective device against dry running has tripped.	Check the: <ul style="list-style-type: none"> liquid level in the tank, or the mains pressure protective device and its connecting cables
The fuses for the pump or auxiliary circuits are blown.	Replace the fuses.

7.3 The electric pump starts, but the thermal protector trips or the fuses blow immediately after

Cause	Remedy
The power supply cable is damaged.	Check the cable and replace as necessary.
The thermal protection or fuses are not suited for the motor current.	Check the components and replace as necessary.
The electric motor is short circuit.	Check the components and replace as necessary.
The motor overloads.	Check the operating conditions of the pump and reset the protection.

7.4 The electric pump starts, but the thermal protector trips or the fuses blow a short time after

Cause	Remedy
The electrical panel is situated in an excessively heated area or is exposed to direct sunlight.	Protect the electrical panel from heat source and direct sunlight.
The power supply voltage is not within the working limits of the motor.	Check the operating conditions of the motor.
A power phase is missing.	Check the <ul style="list-style-type: none"> • power supply • electrical connection

7.5 The electric pump starts, but the thermal protector trips a varying time after

Cause	Remedy
There are foreign objects (solids or fibrous substances) inside the pump which have jammed the impeller.	Contact the local sales and service representative.
The pumps delivery rate is higher than the limits specified on the data plate.	Partially close the on-off valve down stream until the delivery rate is equal or less than the limits specified on the data plate.
The pump is overloaded because it is pumping liquid that is too dense and viscous.	Check the actual power requirements based on the characteristics of the pumped liquid and replace the motor accordingly.
The motor bearings are worn.	Contact the local sales and service representative.

7.6 The electric pump starts, but the system's general protection is activated

Cause	Remedy
A short circuit in the electrical system.	Check the electrical system.

7.7 The electric pump starts, but the system's residual current device (RCD) is activated

Cause	Remedy
There is an ground (earth) leakage.	Check the insulation of the electrical system components.

7.8 The pump runs but delivers too little or no liquid

Cause	Remedy
There is air inside the pump or the piping.	<ul style="list-style-type: none"> • Bleed the air
The pump is not correctly primed.	Stop the pump and repeat the prime procedure. If the problem continues: <ul style="list-style-type: none"> • Check that the mechanical seal is not leaking. • Check the suction pipe for perfect tightness. • Replace any valves that are leaking.
The throttling on the delivery side is too extensive.	Open the valve.
Valves are locked in closed or partially closed position.	Disassemble and clean the valves.
The pump is clogged.	Contact the local sales and service representative.
The piping is clogged.	Check and clean the pipes.
The rotation direction of the impeller is wrong .	Change the position of two of the phases on the terminal board of the motor or in the electric control panel.
The suction lift is too high or the flow resistance in the suction pipes is too great.	Check the operating conditions of the pump. If necessary, do the following: <ul style="list-style-type: none"> • Decrease the suction lift • Increase the diameter of the suction pipe

7.9 The electric pump stops, and then rotates in the wrong direction

Cause	Remedy
There is a leakage in one or both of the following components: <ul style="list-style-type: none">• The suction pipe• The foot valve or the check valve	Repair or replace the faulty component.
There is air in the suction pipe.	Bleed the air.

7.10 The pump starts up too frequently

Cause	Remedy
There is a leakage in one or both of the following components: <ul style="list-style-type: none">• The suction pipe• The foot valve or the check valve	Repair or replace the faulty component.
There is a ruptured membrane or no air pre-charge in the pressure tank.	See the relevant instructions in the pressure tank manual.

7.11 The pump vibrates and generates too much noise

Cause	Remedy
Pump cavitation	Reduce the required flow rate by partially closing the on-off valve downstream from the pump. If the problem persists check the operating conditions of the pump (for example height difference, flow resistance, liquid temperature).
The motor bearings are worn.	Contact the local sales and service representative.
There are foreign objects inside the pump.	Contact the local sales and service representative.
Impeller rubs on the wear ring	Contact the local sales and service representative.

For any other situation, refer to the local sales and service representative.

Datasheets

This appendix reproduces datasheets for the various components used within the system.

Fact Sheet

VLT® HVAC Drive FC 102

The VLT® HVAC Drive series is available in a wide power range designed for all HVAC applications. An advanced drive built on HVAC dedication.

The VLT® HVAC Drive is a full-featured, HVAC dedicated drive with built-in intelligence. The VLT® HVAC Drive has a vast number of functions developed to meet the diverse needs of the HVAC business. It is the perfect match for pumps, fans and compressors in modern buildings that are fitted with increasingly sophisticated solutions.

NABERS compliance

Thanks to its built-in energy meter, the VLT® HVAC Drive is certified as fully compliant with National Australian Built Environment Rating System (NABERS)

98%
energy efficiency

Save energy and
money with up to
98% efficiency VLT®
drives.

requirements. This means you save on installation time and cost, because there is no need to install a separate energy meter.

Product range

3 x 200 – 240 V.....	1.1 – 45 kW
3 x 380 – 480 V.....	1.1 – 1000 kW
3 x 525 – 600 V.....	1.1 – 90 kW
3 x 525 – 690 V.....	1.1 – 1400 kW

With 110% overload torque

Available protection ratings

IP 00	355 – 630 kW
IP 20.....	1.1 – 400 kW
IP 21(Type 1)	1.1 – 1400 kW
IP 54 (Type 12).....	75 – 1400 kW
IP 55 (Type 12).....	1.1 – 90 kW
Type 3R.....	1.1 – 400 kW
IP 66 (Type 4X indoor)	1.1 – 90 kW

Optional coating providing extra protection for aggressive environments.

Feature	Benefit
All built-in – low investment	
Modular product concept with a wide range of options	Low initial investment – max. flexibility, later upgrade possible
Dedicated HVAC I/O functionality for temperature sensors etc.	External conversion saved
Decentral I/O control via serial communication	Reduced wiring costs, and external controller I/O saved
Wide range of HVAC protocols for BMS controller connectivity	Less extra gateway solutions needed
4 x auto tuned PID's	No external PID controller needed
Smart Logic Controller	Often makes PLC unnecessary
Real Time Clock	Enables daily and weekly settings
Integrated fan, pump and compressor functionality i.e.	Saves external control and conversion equipment
Fire Override Mode, Dry run Detection, Constant Torque etc.	Protects equipment and saves energy
Back-channel cooling for frame D, E and F frame	Prolonged lifetime of electronics
Save energy – less operation cost	
Automatic Energy Optimizer function, advanced version	Saves 5 – 15% energy
Advanced energy monitoring	Overview on energy consumption
Energy saving functions i.e. flow compensation, sleep mode etc.	Saves energy
Unequalled robustness – maximum uptime	
Robust single enclosure	Maintenance-free
Unique cooling concept with no ambient air flow over electronics	Problem-free operation in harsh environments
Max ambient temp. 50°C without derating (D-frame 45°C)	No external cooling or oversize necessary
User-friendly – save commissioning and operating cost	
Smart Start	Quick and precise start-up
Awarded graphical display, 27 languages	Effective commissioning and operation
USB plug and play connection	Easy to use PC software tools
Global HVAC support organisation	Local service – globally
Built-in DC coils and RFI filters – no EMC concerns	
Integrated DC link harmonic filters	Small power cables. Meets EN 61000-3-12
IntegratedEMC filters	Meets EN 55011 Class B, A1 or A2 and IEC61800-3 Category C1, C2 and C3

Application options

A wide range of integrated HVAC options can be fitted in the drive:

VLT® General Purpose I/O MCB 101

3 digital inputs, 2 digital outputs,
1 analog current output,
2 analog voltage inputs.

VLT® Relay Card MCB 105

Adds 3 relay outputs.

VLT® Extended Relay Card MCB 113

7 digital inputs, 2 analog outputs 4
SPDT relays, Meets NAMUR recommendations, Galvanic isolation capability

VLT® Analog I/O MCB 109

3 Pt1000/Ni1000 inputs, 3 analogue voltage outputs and back-up power for Real-Time Clock.

VLT® 24 V External Supply MCB 107

24 VDC external supply can be connected to supply, control and option cards.

VLT® Sensor Input MCB 114

Sensor input card for motor protection with 2 or 3 PT100 or PT1000 inputs

Brake chopper (IGBT) option

Connected to an external brake resistor, the built-in brake chopper limits the load on the intermediate circuit in situations where the motor acts as a generator.

VLT® BACnet/IP MCA 125

Use this option for fast access to information and reduced overall cost of ownership in building management systems. It enables communication via the BACnet/IP protocol, and BACnet over Ethernet.

Power options

A wide range of external power options are available for VLT® HVAC Drives in critical networks or applications:

■ VLT® Advanced Harmonic Filter

For critical demands on harmonic distortion

Specifications

Mains supply (L1, L2, L3)

Supply voltage	200 – 240 V ±10% 380 – 480 V ±10% 525 – 600 V ±10% 525 – 690 V ±10%
Supply frequency	50/60 Hz
Displacement power factor ($\cos \phi$)	> 0.98 near unity
Switching on input supply L1, L2, L3	1–2 times/min.

Output data (U, V, W)

Output voltage	0–100% of supply voltage
Switching on output	Unlimited
Ramp times	1–3600 s
Output frequency	0–590 Hz

Digital inputs

Programmable digital inputs	6*
Logic	PNP or NPN
Voltage level	0–24 VDC

* 2 can be used as digital outputs

Pulse inputs

Programmable pulse inputs	2*
Voltage level	0–24 VDC (PNP positive logic)
Pulse input accuracy	(0.1–110 kHz)

* Utilize some of the digital inputs

Analog input

Analog inputs	2
Modes	Voltage or current
Voltage level	0 V to +10 V (scaleable)
Current level	0/4 to 20 mA (scaleable)

Analog output

Programmable analog outputs	1
Current range at analog output	0/4–20 mA

Relay outputs

Programmable relay outputs	2 (240 VAC, 2 A and 400 VAC, 2 A)
----------------------------	-----------------------------------

Fieldbus communication

Standard built-in: FC Protocol N2 Metasys FLN Apogee Modbus RTU BACnet embedded	Optional: VLT® LonWorks MCA 108 VLT® BACnet MCA 109 VLT® BACnet/IP MCA 125 VLT® DeviceNet MCA 104 VLT® PROFIBUS DP MCA 101

100mm Diameter Glycerine Filled Pressure Gauge

Application

For the measurement of fluid liquids that are not:- highly viscous, high temperature (over 60°C), likely to solidify/crystallize or corrosive to copper or tin alloys.

Also suitable for non-oxidising gases (such as oxygen or acetylene) up to 25 bar maximum.

Glycerine filled gauges are particularly suited to applications where oscillating/surging pressures or vibration are present. The damping effect of the glycerine will steady the pointer making it easier to take a reading against the scale.

Description

Nominal Size
100mm

Accuracy
+/- 1.6% FSD

Scales
PSI Outer (Black) & BAR Inner (Red) - Pressure
"HG Outer (Black) & BAR Inner (Red) - Vacuum
"HG+PSI Outer (Black) & BAR Inner (Red) - Compound

Ranges
-30/0"HG Vacuum to 0/10000 PSI Pressure
-30"HG/+15 PSI to -30"HG/+160 PSI Compound

Mounting Options
Bottom - Direct Mounting (standard)
Bottom - Surface Mounting Rear 3 Hole Flange

Centre Back - Direct Mounting (standard)
Centre Back - Panel Mounting Rear Bracket
Centre Back - Panel Mounting Front 3 Hole Flange

Operating Temperature
Ambient: -20/+60°C
Medium: +60°C maximum

Temperature Effect
Variation in indication caused by temperature
 $\pm 0.04 \times (t_2 - t_1)\%$ of the span
t₁ is the reference ambient temperature in °C
t₂ is the ambient temperature in °C

Ingress Protection
IP 65 as per EN 60529

Case & Crimped Bezel
304 Stainless Steel

Window
Polycarbonate - Crystal clear

Pressure Element
CU Alloy - Sealed Bourdon tube
C-Type <100 BAR
Coiled Type >100 BAR

Joints
Soldered with tin/silver alloy

Movement
High Precision Brass

Process Connection & Block
Brass - 3/8" BSP (parallel) male (standard)
Brass - 1/2" BSP (parallel) male (standard)
Brass - 22mm Hexagon block

Pointer
Aluminium - Black

Dial
Aluminium - White

Filling
FDA Approved food grade glycerine

Rosemount 2110 Compact Vibrating Fork Liquid Level Switch

- Function virtually unaffected by flow, turbulence, bubbles, foam, vibration, solids content, coating, properties of the liquid, and product variations
- No need for calibration and requires minimum installation procedures
- Polarity insensitive and short circuit protection
- Industry standard plug/socket connection
- No moving parts or crevices means virtually no maintenance
- Electronic, self-checking, and condition monitoring - Heartbeat LED gives status and health information
- Magnetic test point makes functional test easy
- Compact design, small in size and weight
- "Fast Drip" Fork Design gives quicker response time especially with viscous liquids
- Hygienic connections

Reliable Performance...In Challenging Applications

MEASUREMENT PRINCIPLE

The Rosemount 2110 is designed using the principle of a tuning fork. A piezo-electric crystal oscillates the forks at their natural frequency. Changes to this frequency are continuously monitored. The frequency of the vibrating fork sensor changes depending on the medium in which it is immersed. The denser the liquid, the lower the frequency.

When used as a **low level alarm**, the liquid in the tank or pipe drains down past the fork, causing a change of natural frequency that is detected by the electronics and switches the output state.

When the 2110 is used as a **high level alarm**, the liquid rises in the tank or pipe, making contact with the fork which then causes the output state to switch.

KEY FEATURES AND BENEFITS

- Virtually unaffected by turbulence, foam, vibration, solids content, coating, or liquid properties
- Stainless steel housing and plug/socket connection for the fast fit, high volume user
- Compact and lightweight design for side or top mounting
- The industry standard DIN 43650 plug/socket is used for a fast connection. The polarity insensitivity and short circuit protection make electrical hook-up safe and easy
- The 2110 is designed for operation in temperatures from -40 to 302 °F (-40 to 150 °C)
- The 'heartbeat' LED gives status and health information on the 2110
- 'Fast Drip' fork design gives quicker response time, especially with viscous liquids
- Rapid wet-to-dry time for highly responsive switching
- Fork shape is optimized for hand polishing to meet hygienic requirements
- No moving parts or crevices for virtually no maintenance

Threaded Process Connection

Rosemount 2110

Fit and Forget

- Once installed, the 2110 is ready to go.
It needs no calibration and requires minimum installation
- The 'heartbeat' LED gives an instant visual indication that the unit is operational
- Functional testing of the instrument and system is easy with a magnetic test point
- You can install, and forget it

Superior Performance

- Functionality is virtually unaffected by flow, turbulence, bubbles, foam, or vibration
- The 'Fast Drip' design allows the liquid to be quickly drawn away from the fork tip, making the 2110 quicker and more responsive in high density or viscous liquid applications
- With a user-selectable time delay feature, the risk of false switching is minimized in turbulent or splashing applications

APPLICATIONS

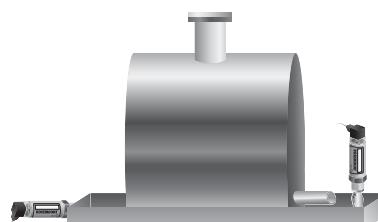

- Overfill protection
- High and low level alarms
- Leak detection
- Run dry or pump protection
- Pump control or limit detection
- Hygienic applications

Overfill Protection

High And Low Level Alarm

Leak Detection

Pump Protection

Rosemount 2110

Compact Vibrating Fork Liquid Level Switch

2110 Level Switch

Rosemount 2110 capabilities include:

- Rugged stainless steel body and fork, the ideal choice for OEM applications
- Compact design, small and lightweight, perfect for small tank or pipe installations
- Short fork or semi-extended lengths
- Direct load switching or PNP/PLC electronics
- Safe area only

Additional Information

Specifications: page 5

Dimensions: page 7

Certifications: page 6

TABLE 1. 2110 Ordering Information

★The Standard offering represents the most common options. The starred options (★) should be selected for best delivery.
The Expanded offering is subject to additional delivery lead time.

Model	Product Description	
2110	Compact Vibrating Fork Liquid Level Switch	
Electronic Type		
Standard		Standard
0	Direct load switching with plug connection (2 wire) 21 to 264 Vac 50/60Hz, 21 to 264 Vdc	★
1	PNP/PLC low voltage switching with plug connection 18 to 60 Vdc	★
Process Connection Size / Type		
Standard		Standard
0A	3/4-in. BSPT (R) thread	★
1A	1-in. BSPT (R) thread	★
0D	3/4-in. NPT thread	★
2R	2-in. (51 mm) Tri-clamp	★
1B	1-in. BSPP (G) thread	★
1L	1-in. BSPP (G) Semi-extended 4.6 in. (116 mm)	★
Product Certificates		
Standard		Standard
NA	No hazardous locations certifications (safe area use only)	★
U1	DIBt/WHG Overfill protection	★
OPTIONS		
Calibration Data Certificate		
Standard		Standard
Q4	Certificate of functional test	★
Tag Plate

November 2010

Rosemount 2110

Specifications

PHYSICAL

Product

Rosemount 2110 Compact Liquid Level Switch

Measuring principle

Vibrating Fork

Applications

Most liquids including coating liquids, aerated liquids, and slurries

Mechanical

Process Material

316L Stainless Steel (1.4404)

For Tri-Clamp connection, hand polished to better than 0.8 µm. Gasket material for 1 in. BSPP (G1) is Non-asbestos BS7531 Grade X carbon fiber with rubber binder.

Housing Materials

Body: 304 SST with polyester label

LED window:

Flame retardant Polyamide (Pa12) UL94 V2

Plug: Polyamide glass reinforced

Plug seals: Nitrile butadiene rubber

Mounting

- 3/4-in. BSPT (R) or NPT
- 1-in. BSPT (R) or BSPP (G) thread, or
- Hygienic 2-in. (51 mm) Tri-clamp fitting

Dimensional Drawings

See "Dimensional Drawing" on page 7

Ingress of Protection Rating

IP66/67 to EN60529

PERFORMANCE

Hysteresis (water)

±0.039-in. (± 1 mm) nominal.

Switching Point (water)

0.5 in. (13 mm) from fork tip if mounted vertically.

0.5 in. (13 mm) from the fork edge if mounted horizontally.

The switch point varies with different liquid densities.

FUNCTIONAL

Maximum Operating Pressure

(The final rating depends on the process connection)

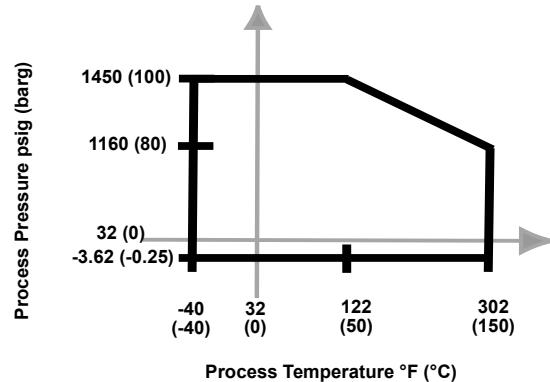

Threaded Connection

See Figure 1

Hygienic Connection

435 psig (30 barg)

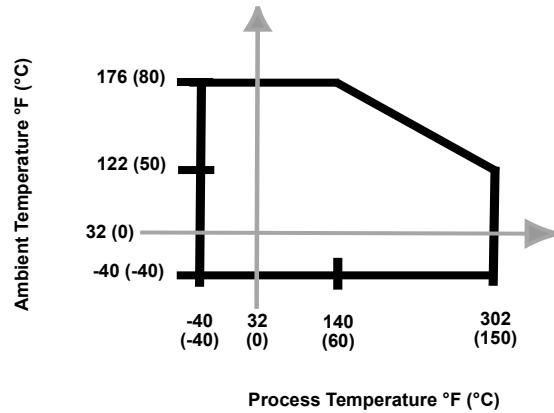

Figure 1. Process Pressure

Temperature

See Figure 2 for the maximum and minimum operating temperatures.

Figure 2. Temperature

Liquid Density

Minimum 37.5 lb/ft³ (600 kg/m³)

Liquid Viscosity Range

0.2 to 10000 cP (centiPoise)

Solids Content and Coating

Maximum recommended diameter of solid particles in the liquid is 0.2 in. (5 mm).

For coating product, avoid 'bridging' of forks.

Switching Delay

1 second dry-to-wet or wet-to-dry

CIP (Clean In Place) Cleaning

Withstands steam cleaning routines up to 302 °F (150 °C)

Electrical

Switching Mode

User selectable (Dry=on or Wet=on) by selecting plug wiring

Cable Connection

Via 4-way plug provided (DIN43650).

Max. conductor size is 15AWG.

4-position orientation (90/180/270/360 deg.).

Conductor Size

Maximum 0.06 in.² (1,5 mm²)

Cable Gland

PG9 provided. Cable diameter 0.24 to 0.31 in. (6 to 8 mm)

Protection

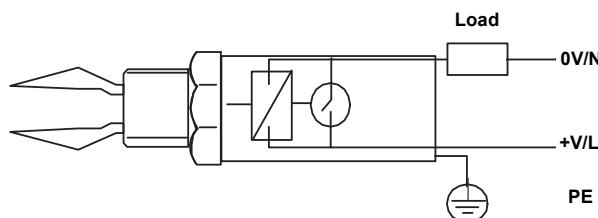

Polarity insensitive. Over-current, short circuit, and load-missing protection. Surge protection to IEC61326.

Grounding

The 2110 should always be grounded either through the terminals or using the external ground connection provided.

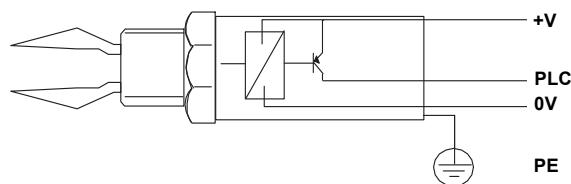

Direct Load Switching (Electronics Type Code 0)

Operating Voltage	21 to 264 Vac (50 to 60 Hz)/dc
Maximum switched load	500 mA
Maximum peak load	5 A for 40 ms max.
Minimum switched load	20 mA continuous
Voltage drop	6.5 V @ 24 Vdc / 5 V @ 240 Vac
Current draw (load off)	<3.0 mA continuous

PNP Switching (Electronics Type Code 1)

Operating Voltage	18 to 60 Vdc
Maximum switched load	500 mA
Maximum peak load	5 A for 40 ms max.
Voltage drop	<3 V
Supply Current	3 mA nominal
Output current (load off)	<0.5 mA

Product Certifications

L.V. Directive

EN61010-1 Pollution degree 2,
Category II (264V max),
Pollution degree 2, Category III (150 V maximum)

Electro Magnetic Compatibility (EMC) Directive

EN61326

Overfill Protection

If required, select Product Certificates code U1 for DIBt/WHG overfill protection.

The approval number is Z-65.11-236.

Canadian Registration Number (CRN)

The CRN is 0F04227.2C for model numbers with a NPT threaded process connection selected.

Rosemount 2110

Rosemount Level Solutions

Emerson provides a complete range of Rosemount products for level measurement applications.

Vibrating Fork Switches – Point Level Detection

For high and low alarms, overfill protection, pump control, including wide pressure and temperature requirements, and hygienic applications. Flexible mounting. Immune to changing process conditions and suitable for most liquids.

The product line consists of:

- Rosemount 2160 Wireless
- Rosemount 2130 Enhanced
- Rosemount 2120 Full-featured
- Rosemount 2110 Compact

Differential Pressure – Level or Interface Measurement

Flexible mounting for liquid tank levels, including those with wide temperature and pressure requirements. Can be isolated by valves. Unaffected by: vapor space changes, surface conditions, foam, corrosive fluids, internal tank equipment. Optimize performance with direct mount, Tuned-System Assemblies:

- Rosemount DP Level Transmitters and Remote Seals
- Rosemount 3051S_L, 3051L, and 2051L Liquid Level Transmitters

Ultrasonic – Level Measurement

Top mounted, non-contacting for simple tank and open air level measurements. Unaffected by fluid properties such as: density, viscosity, dirty coating, and corrosiveness. Appropriate for routine applications outside of explosion proof areas.

The product line consists of:

- Rosemount 3100 Series Ultrasonic Process Level Transmitters

Guided Wave Radar – Level and Interface Measurement

Top mounted, direct level and interface measurement of liquids or solids, including those with wide temperature and pressure requirements. Unaffected by changing process conditions. Good fit for small spaces and easy swap for older technologies.

The product line consists of:

- Rosemount 5300 Series – Accurate, superior performance transmitter in most applications including process vessels and control
- Rosemount 3300 Series – Versatile and easy-to-use transmitter in most liquid storage and monitoring applications

Non-contacting Radar – Level Measurement

Top mounted, direct level measurement for liquids or solids, including those with wide temperature and pressure requirements. Can be isolated by valves. Unaffected by changing process conditions. Good for dirty, coating, and corrosive applications.

The product line consists of:

- Rosemount 5400 Series – Accurate, superior performance 2-wire transmitters for most liquid level applications and process conditions
- Rosemount 5600 Series – 4-wire transmitters with maximum sensitivity and performance for solids, challenging reactors, rapid level changes, and excessive process conditions

Chambers for Process Level Instrumentation

- Rosemount 9901 – High quality chambers for external mounting of level measurement and control instrumentation on process vessels

pCO5+ Controllo elettronico programmabile / Electronic programmable control

pGDE*

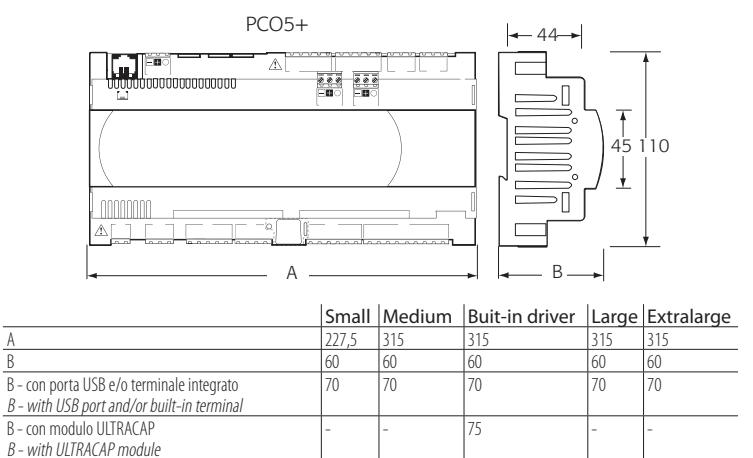

ITA DESCRIZIONE

ENG DESCRIPTION

pCO5+ è un controllo elettronico programmabile a microprocessore sviluppato da CAREL per offrire molteplici applicazioni nel settore del condizionamento dell'aria, della refrigerazione e in generale del settore HVAC/R. Può essere collegato in rete pLAN a tutti i controlli della famiglia pCO sistema ed ai terminali della gamma pGD. Il programma applicativo, creato nell'ambiente di sviluppo 1Tool, è caricato sul controllo tramite il programma pCO Manager, disponibile sul sito <http://ksa.carel.com>. Vedere il man. cod. +0300020EN, che can be downloaded from www.carel.com.

 WARNING: separate as much as possible the probe and digital input signal cables from the cables carrying inductive loads and power cables to avoid possible electromagnetic disturbance. Never run power cables (including the electrical panel wiring) and signal cables in the same conduits.

 Disposal of the product: the appliance (or the product) must be disposed of separately in accordance with the local waste disposal legislation in force.

ITA

Caratteristiche tecniche

Contenitore plastico

Montaggio agganciabile su guida DIN secondo DIN 43880 CEI EN 50022

Materiale tecnopolimero

Autoestinguenza V2 (secondo UL94) e 850 °C (secondo IEC 60695)

Temperatura per la prova con la sfera 125 °C

Resistenza alle correnti strisciante ≥ 250 V

Colore Bianco RAL 9016

Terminale integrato Tipo PGD1 (132x64 pixel) con tastiera retroilluminata

Altre caratteristiche

Condizioni di funzionamento P+(3,5)*****0** (no terminale integrato): -40T70 °C, 90% UR non condens. (*)

(*) con modulo Ultracap montato: -40T60 °C P+(3,5)*****0** (con terminale integrato): -20T60 °C, 90% UR non condens. (*)

Condizioni di immagazzinamento P+(3,5)*****0** (no terminale integrato): -40T70 °C, 90% UR non condens.

(*) con terminale integrato: -30T70 °C, 90% UR non condens.

Grado di protezione Mod. con porta USB e/o con modulo Ultracap: IP20 nel solo frontalino

Situaz. di inquinam. del disp. di comando da integrare su apparecchiature di Classe I e/o II nelle versioni senza driver valvola, classe I nelle versioni con driver valvola

PTI dei materiali per isolamento PCB: PTI 250 V; materiale di isolamento: PTI 175

Periodo delle sollec. elett. delle parti isolanti lungo

Tipo azioni 1C, Y1 per le versioni a SSR

Tipo di disconnessione o microinterruzione microinterruzione

Categoria di resistenza al calore e al fuoco Categoria D (UL94-V2)

Caratter. di invecchiamento (ore funzionam.) 80.000

N.ro di cicli di manovra operazioni automatiche 100.000 (EN 60730-1); 30.000 (UL 60730)

Tensione impulsiva nominale 2500 V

Caratteristiche elettriche:

Alimentazione

Small, Medium, Large, Extralarge: utilizzare un trasformatore dedicato di sicurezza in classe 2 da 50 VA.

Built-in driver: utilizzare un trasformatore dedicato di sicurezza in classe II da 100 VA.

	Vac	P (Vac)	Vdc	P (Vdc)
Small	24 Vac (+10/-15%), 50/60 Hz, fusibile esterno da 2,5 A	45 VA	28...36 Vdc (-20/+10%)	30 W
Medium			fusibile esterno da 2,5 A	
Large				
Extralarge				
Built-in driver		90 VA		Non ammesso

Attenz.: per la versione "pCO5+ built-in driver" sono obbligatori l'alimentazione in alternata e il collegamento del secondario del trasformatore a terra (G0 a terra).

Merrettiera con connettori maschio/femmina estraibili

Sezione cavi min 0,5 mm² - max 2,5 mm²

Orologio con batteria di serie, precisione 100 ppm

Buzzer abilitabile da software, solo con terminale integrato

Batteria Di tipo "botton" al litio cod. CR2430 tensione 3 Vdc (dimen. 24x3 mm)

Classe e struttura del software Classe A

Categ. di immunità ai surge (CEI EN 61000-4-5) Categoria III

Dispositivo non destinato ad essere tenuto in mano quando alimentato

Ingressi / Uscite

Ingressi/uscite universali:

Ingressi analogici, Lmax = 30 m, numero massimo

Small	Medium	Built-in driver	Large	Extralarge
227,5	315	315	315	315

B - con porta USB e/o terminale integrato

B - with USB port and/or built-in terminal

B - con modulo ULTRACAP

B - with ULTRACAP module

Modelli (vedere listino per codici di acquisto ordinabili)

MODELS (see the list price for purchase codes, that can be ordered)

B - con modulo ULTRACAP

B - with ULTRACAP module

Caratteristiche tecniche

Plastic case

Installation Fitted on DIN rail as per DIN 43880 and IEC EN 50022

Material Technopolymers

Self-extinguishing V2 (according to UL94) and 850 °C (according to IEC 60695)

Temperature for the ball pressure test 125 °C

Creeping current resistance ≥ 250 V

Colour White RAL 9016

Built-in terminal Type PGD1 (132x64 pixel) with backlit keyboard

Other specifications

Operating conditions P+(3,5)*****0** (no Built-in terminal): -40T70 °C, 90% UR no-condensing (*)

(*) with Ultracap module installed: -40T60 °C P+(3,5)*****0** (with Built-in terminal): -20T60 °C, 90% UR no-condensing

Storage conditions P+(3,5)*****0** (no Built-in terminal): -40T70 °C, 90% UR no-condensing

(*) with Ultracap module installed: -40T70 °C, 90% UR no-condensing

Models with USB port and/or with Ultracap module: IP20 in the front panel only

Models without USB port and without Ultracap module: IP40 in the front panel only

Control pollution situation 2

Class according to protection against electrical shocks Class I in versions with valve driver

PTI of the insulating materials PCB: PTI250; insulation material: PTI 175

Period of electrical stress on the insulat. parts Long

Type of actions 1C, 1Y for SSR versions

Type of disconnection or microswitching Micro-switching

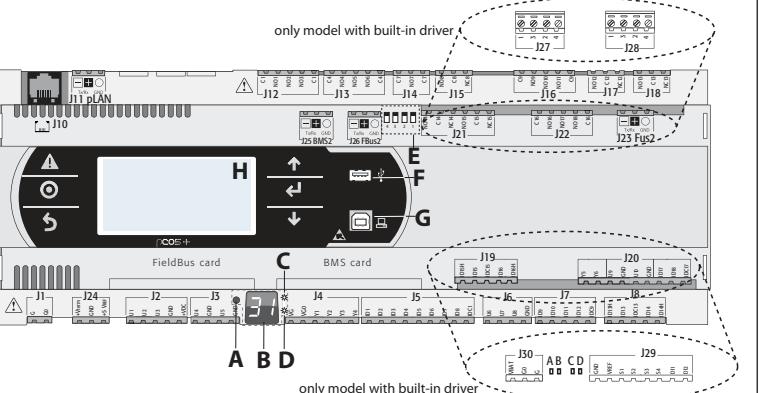

Category of resistance to heat and fire Category D (UL94-V2)

ITA MORSETTI DI COLLEGAMENTO

↑	Enter	Bianco	Conferma valore
↓	DOWN	Bianco	Premuto insieme a UP e ENTER permette di cambiare l'indirizzo del terminale (solo per terminali PGDE); diminuisce valore
○	Selezione indirizzo pLAN	-	• Pressione breve: visualizzazione indirizzo pLAN • Pressione lunga (> 5s): procedura di modifica indirizzo pLAN

ENG KEYBOARD (BUILT-IN and PGDE)

Key	Descriz.	Backlight	Functions
!	Alarm	White/Red	• Pressed together with UP and supplying power allows the controller address to be changed; • pressed together with Enter accesses the BIOS page
!			
○	Prg	White/Yellow	-
↶	Esc	White	return high level
↑	UP	White	• Pressed together with DOWN and ENTER allows the terminal address to be changed (only for PGDE terminal); • increase value
↑	Enter	White	confirm value
↓	DOWN	White	• Pressed together with UP and ENTER allows the terminal address to be changed (only for PGDE terminal); • decrease value
○	pLAN address selection	-	• short press: shows pLAN address; • long press (> 5s): procedure for modifying the pLAN address

ITA CONFIGURAZIONE PORTA J26

Rispetto al pCO5, i controlli pCO5+ sono dotati di 4 microinterruttori per configurare la porta seriale J26 (figura):

- microinterruttori tutti "IN BASSO": porta J26 impostata con hardware Fieldbus;
- microinterruttori tutti "IN ALTO": porta J26 impostata con hardware BMS(*);

La configurazione di fabbrica è: porta Fieldbus. (*) La porta seriale rimane comunque la Fieldbus a livello software all'interno dell'ambiente di programmazione 1Tool.

ENG PORT J26 CONFIGURATION

In comparison to pCO5, the pCO5+ controllers are equipped with 4 micro-switches to configure the serial port J26 (figure):

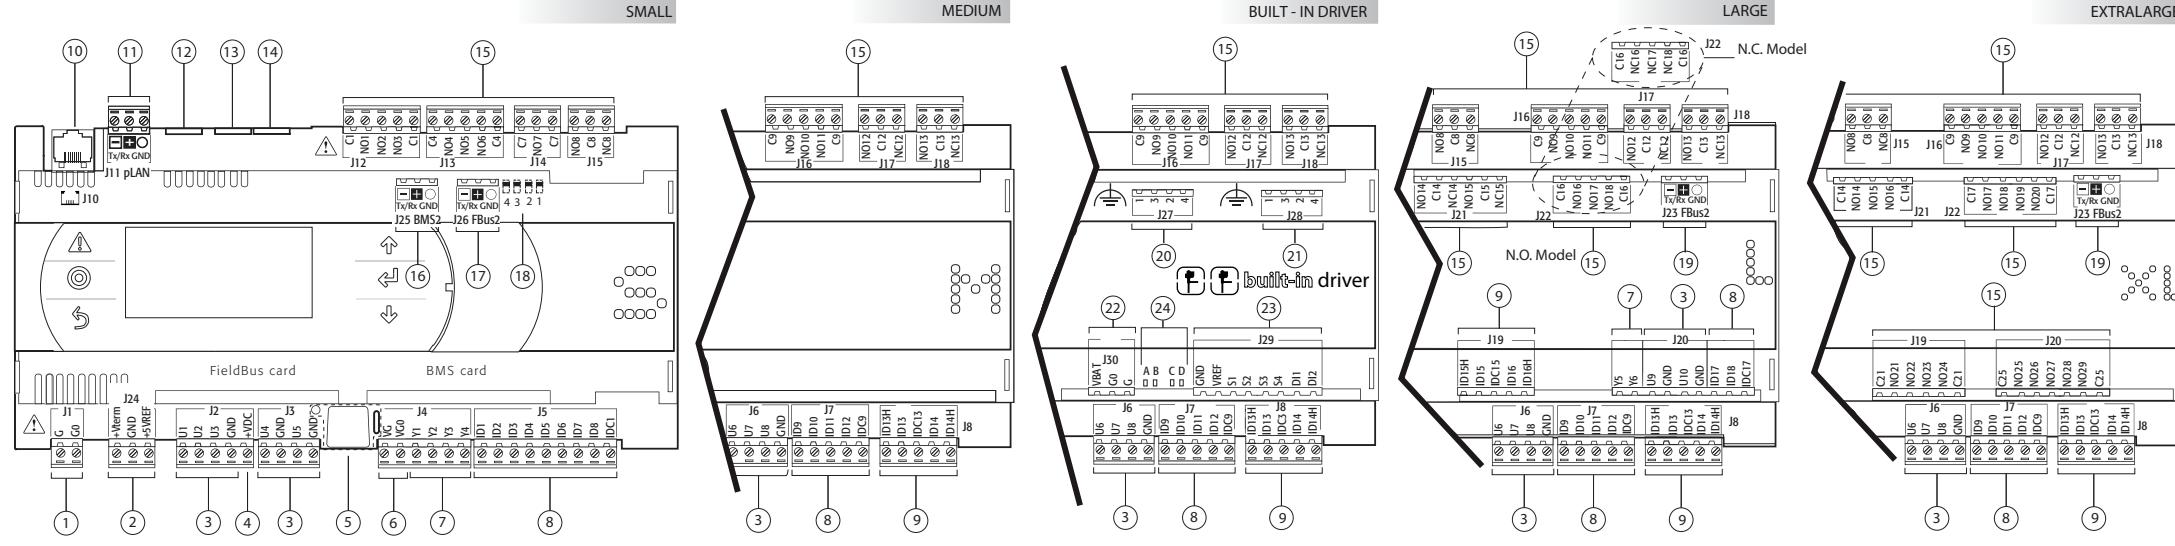

- all micro-switches "DOWN": port J26 set with Fieldbus hardware;
- all micro-switches "UP": port J26 set with BMS(*) hardware;

The factory setting is: Fieldbus port.

(*) The serial port, however, remains Fieldbus2 at the software level inside the 1Tool programming environment.

ENG CONNECTION TERMINALS

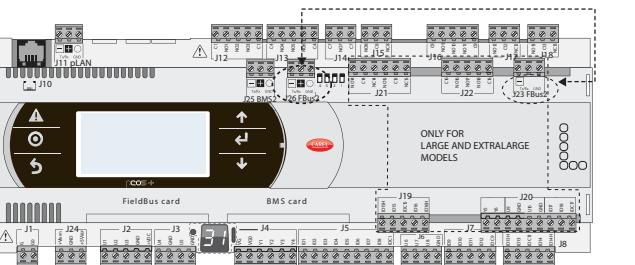

1	Power supply connectors [G(+), G0(-)]
2	+Vterm: alimentazione per terminale aggiuntivo
	+5VREF alimentazione per sonde raziometriche
3	Ingressi/uscite universali
4	+VDC: alimentazione per sonde attive
5	pLAN address setup key, secondary display, LED
6	VG: power supply at voltage A (*) for optoisolat. analog.output
	VG0: power supply for optoisolat. analogue output at 0 Vac/Vdc
7	Analogue outputs
8	ID: digital inputs at voltage A (*)
9	ID.: digital inputs at voltage A (*)
10	IDH.: digital inputs at voltage B (**)
11	pLAN telephone connector for terminal/download application programme
12, 13, 14	Reserved
15	Relay digital outputs
16	BMS2 connector
17	Fieldbus2 connector
18	Fieldbus/BMS selector micro-switch
19	Fieldbus2 connector
20	Electronic Valve A connector
21	Electronic Valve B connector
22	Connector for external Ultracap module
23	External driver analogue and digital inputs
24	Valve status signal LED
	(*) Voltage A: 24 Vac or 28...36 Vdc
	(**) Voltage B: 230 Vac - 50/60 Hz

ITA PORTE SERIALI

ENG SERIAL PORTS

Rispetto al pCO3, i controlli pCO5+ (e pCO5) possiedono una seconda porta seriale BMS sul connettore J25 (BMS2) e una seconda porta Fieldbus sul connettore J26 (FBUS2). Nelle schede pCO5+ versione Large e Extralarge è ancora presente il connettore J23 e riporta la scritta FBUS2 come per il connettore J26. Dal punto di vista della gestione da applicativo 1Tool si tratta infatti della stessa linea seriale e si devono usare indirizzi diversi per i dispositivi connessi ai 2 connettori, mentre dal punto di vista elettrico le porte sono indipendenti (un guasto elettrico nella porta J26 non influenza la porta J23). Vedere la tab. caratteristiche tecniche.

Porte seriali

Serie	Tipo/connettori	Caratteristiche
ZERO	pLAN/J10, J11	Integrata su scheda base RS485 pLAN Non optoisolata Connettori: Jack telefonico 6 vie + Estrattibile 3 vie p. 5,08 Lunghezza massima: 500 m Numero massimo dispositivi collegabili: 32
ONE	BMS 1 Serial Card	Non integrata su scheda base
TWO	Fieldbus 1 Serial Card	Non integrata su scheda base
THREE	BMS 2/J25	Integrata su scheda base RS485 Slave Seriale optoisolata/non optoisolata(*) Connnettore estrattibile 3 vie p. 5,08 Lunghezza massima: 1000 m
FOUR	Fieldbus 2 / J26 (and J23 su Large e J26 su versione Large e Extralarge)	Integrata su scheda base RS485 Master/Slave (**) J23: non optoisolata, J26: opt.-isolated/not opt.-isolated 3-way removable connector 5,08

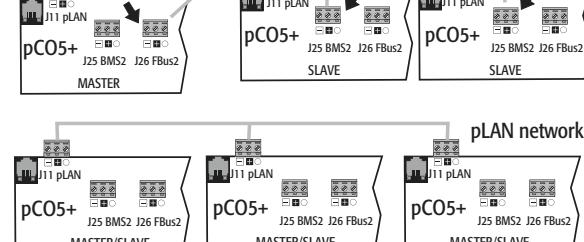

Nota: utilizzare cavo schermato AWG 20-22 a coppia twistate per i +/-; (*) disponibili i 2 modelli; (**) J26 configurabile

ITA CONNESSIONE IN RETE TRA CONTROLLI

Nel pCO5+ ci sono tre tipi di seriali: pLAN, Fieldbus, BMS. La porta seriale Fieldbus RS485 ha hardware di tipo Master, mentre la porta seriale BMS RS485 ha hardware di tipo Slave. I protocolli da utilizzare sulla porta Fieldbus RS485 sono, per natura stessa della porta, di tipo Master (Carel Master o Modbus RTU Master), anche se possono essere utilizzati in casi particolari quelli di tipo Slave (Carel Slave o Modbus RTU Slave), con i dovuti accorgimenti. Analogamente sulla porta BMS RS485, i protocolli da utilizzare sono di tipo Slave, anche se con i dovuti accorgimenti è possibile avere protocolli di tipo Master.

Nota: la rete pLAN è multi-master: ogni controllo può essere contemporaneamente Master o Slave.

MASTER - SLAVE network

ITA ETICHETTAT. INGRESSI / USCITE

I controlli pCO5+ si differenziano per la taglia e sono provvisti di ingressi e uscite e alimentazione alle sonde attive adatte per le varie applicazioni. Le caratteristiche che dipendono dalla taglia sono:

- numero massimo e natura degli ingressi/uscite;
- presenza o meno del display integrato;
- presenza del driver integrato per valvola di espansione.

ENG INPUTS/ OUTPUTS LABEL

The pCO5+ controllers are differentiated by their size and are equipped with inputs and outputs and active probe power supplies that are suitable for the various applications. The size-related characteristics are:

- max. number and nature of the inputs/outputs;
- whether or not it has an integrated display;
- presence of the integrated driver for the expansion valve

Etich. Tipi di segnale

U...	Ingressi/uscite universali, configurabili via software come: Ingressi analogici: - sensori NTC, PTC, PT100, PT1000 - sensori PT100 - segnali 0...1 Vdc o 0...10 Vdc - segnali 0/4...20 mA - segnali 0...5 V per sonde raziometriche Ingressi digitali (non optoisolati): - contatti puliti (non optoisolati) - ingressi digitali veloci Uscite analogiche (non optoisolate): - segnali 0...10 Vdc - segnali PWM
Y...	Analogical outputs 0 to 10 Vdc, PWM outputs
ID...	Digital inputs to 24 Vac or 28...36 Vdc
ID...H	Digital inputs to 230 Vac
NO...	Relay outputs, contact normally open
NC...	Relay outputs, contact normally closed
C...	Relay outputs, common
Tx/Rx, GND	Serial port

ITA COLLEGAMENTO TERMINALE

Il controllo e il terminale sono connessi in rete pLAN.

1: controllo pCO singolo

Nel collegamento del controllo al terminale occorre tenere presente i seguenti vincoli:

- la lunghezza totale della rete pLAN non deve superare i 500 m. Quindi se il terminale è remoto la lunghezza del cavo del terminale entra nel computo totale della lunghezza;
- il cavo telefonico non schermato si può utilizzare per una lunghezza massima di 50 m. Oltre questa lunghezza utilizzare un cavo schermato tripolare;
- oltre i 200 m l'alimentazione del terminale deve essere fornita separatamente;
- è possibile collegare al massimo 3 terminali allo stesso controllo pCO. I terminali devono essere dello stesso tipo (es. tutti PGD1).
- 1 terminale è alimentato dal controllo

 **WARNING:** separate as much as possible the probe and digital input signal cables from the cables carrying inductive loads and power cables to avoid possible electromagnetic disturbance. Never run power cables (including the electrical panel wiring) and signal cables in the same conduits.

IMPORTANT WARNINGS

The CAREL product is a state-of-the-art product, whose operation is specified in the technical documentation supplied with the product or can be downloaded, even prior to purchase, from the website www.carel.com. - The client (builder, developer or installer of the final equipment) assumes every responsibility and risk relating to the phase of configuration the product in order to reach the expected results in relation to the specific final installation and/or equipment. The lack of such phase of study, which is requested/indicated in the user manual, can cause the final product to malfunction of which CAREL can not be held responsible. The final client must use the product only in the manner described in the documentation related to the product itself. The liability of CAREL in relation to its own product is regulated by CAREL's general contract conditions edited on the website www.carel.com and/or by specific agreements with clients.

Descrizione

I terminali grafici pGD Touch da 10 e 13 pollici appartengono alla famiglia di terminali touch screen pensata per rendere semplice e intuitivo l'interfacciamento dell'utente con i controlli della famiglia pCO Sistemi.

La tecnologia elettronica utilizzata e il nuovo display a 65'000 colori permettono di gestire immagini ad alta risoluzione e funzionalità avanzate per ottenere un elevato standard estetico. Il pannello touch screen, inoltre, facilita l'interazione uomo-macchina rendendo, di fatto, più facile la navigazione tra le varie schermate.

Codici modelli

Codice	Dimensione display	Risoluzione
PGDT10000FR10	10.4 pollici	800x600 (SVGA)
PGDT13000FR10	13.3 pollici	1280x800 (WXGA)

Codici accessori

Codice	Descrizione
PGTA00TRFO	Alimentatore 230 VAC – 24 VDC per guida DIN
PGTA00CNVO	Cavo adattatore DB9 per RS485 lunghezza 2 m

Avvertenze per l'installazione

Evitare il montaggio delle schede in ambienti che presentino le seguenti caratteristiche:

- umidità relativa maggiore di quanto indicato nelle specifiche tecniche;
- forti vibrazioni o urti;
- esposizione ad atmosfere aggressive ed inquinanti (es.: gas solforici e ammoniacali, nebbie saline, fumi) con conseguente corrosione e/o ossidazione;
- elevate interferenze magnetiche e/o radiofrequenze (evitare quindi l'installazione delle macchine vicino ad antenne trasmettenti);
- esposizione all'irraggiamento solare diretto e agli agenti atmosferici in genere;
- ampie e rapide fluttuazioni della temperatura ambiente;
- ambienti ove sono presenti esplosivi o miscele di gas infiammabili;
- evitare di avvicinarsi con le dita ai componenti elettronici montati sulle schede per evitare scariche elettrostatiche (estremamente dannose) dall'operatore verso i componenti stessi.

Avvertenze generali

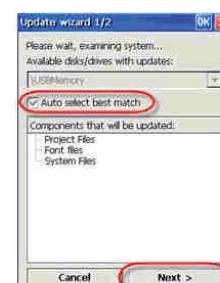

1. I terminale pGDTouch 10" e 13" possono essere alimentati solo in corrente continua.
2. Una tensione di alimentazione elettrica diversa da quella prescritta può danneggiare seriamente il sistema;
3. Utilizzare capicorda adatti per i morsetti in uso. Allentare ogni vite ed inserirvi i capicorda, quindi serrare le viti. Ad operazione ultimata tirare leggermente i cavi per verificarne il corretto serraggio;
4. L'uso a temperature particolarmente basse può causare una visibile diminuzione della velocità di risposta del display. Questo è da ritenersi normale e non è indice di malfunzionamento.

Aggiornamento Runtime

Copiare il pacchetto di aggiornamento contenente il Runtime in una chiave USB e successivamente collegare la chiave USB al pGDTouch. Tenere premuto il dito sullo schermo del terminale pGD Touch per alcuni secondi fino a che il menu di scelta rapida sarà visualizzato.

Selezionare "Update..." per avviare la procedura di aggiornamento Runtime. L'utilità per l'aggiornamento del Runtime si avvierà ed apparirà la seguente finestra.

Selezionare "Auto select best match" e premere next, in questo modo verrà avviata la procedura di aggiornamento.

Attendere che la procedura sia terminata e premere "Close".

Description

The pGD Touch 10 and 13 inch graphic terminals are part of the family of touchscreen terminals designed to simplify user interface with the pCO sistema family controllers.

The electronic technology used and the new 65,000 colour display means high resolution images and advanced functions are available for a superior appearance. The touchscreen panel makes interaction between the user and the unit much easier by simplifying navigation between the various screens.

Model codes

Code	Display size	Resolution
PGDT10000FR10	10.4 inches	800x600 (SVGA)
PGDT13000FR10	13.3 inches	1280x800 (WXGA)

Accessory codes

Code	Description
PGTA00TRFO	230 VAC – 24 VDC power supply for DIN rail
PGTA00CNVO	DB9 adapter cable for RS485, 2 m long

Installation warnings

Do not install the boards in environments with the following characteristics:

- relative humidity greater than the value specified in the technical specifications;
- strong vibrations or knocks;
- exposure to aggressive and polluting atmospheres (e.g.: sulphur and ammonia fumes, saline mist, smoke) so as to avoid corrosion and/or oxidation;
- strong magnetic and/or radio frequency interference (therefore avoid installing the units near transmitting antennae);
- exposure to direct sunlight or the elements in general;
- large and rapid fluctuations in the room temperature;
- environments where explosives or mixes of flammable gases are present;
- avoid touching or nearly touching the electronic components fitted on the boards to avoid electrostatic discharges (extremely damaging) from the operator to the components.

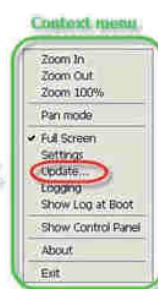

General warnings

1. The pGD Touch 10" and 13" terminals are for DC power supply only.
2. Power supplies other than those specified may seriously damage the system;
3. Use cable ends suitable for the corresponding terminals. Loosen each screw and insert the cable ends, then tighten the screws. When finished, slightly tug the cables to check they are sufficiently tight;
4. Operation at low temperatures may cause a visible decline in the response speed of the display. This should be considered normal and does not indicate a malfunction.

Runtime update

Copy the update package containing the Runtime to a USB pendrive and then plug the pendrive into the pGDTouch.

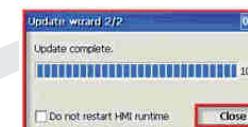

Touch and hold the pGD Touch terminal screen for a few seconds until the shortcut menu is displayed.

Select "Update..." to start the Runtime update procedure. The Runtime update utility will start and the following window will be displayed.

Select "Auto select best match" and then press next to start the update procedure.

Wait for the procedure to end and press "Close".

Alimentazione / Power supply

A Alimentatore a bassissima tensione di sicurezza/sorgente di potenza limitata / Extra low voltage power supply / Limited power source.

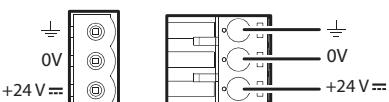

Fig.5

A Non aprire l'involucro dei pannelli quando sono alimentati / Don't open the panel rear cover when the power supply is applied.

Regole per lo smaltimento / Guidelines for disposal

- Non smaltire il prodotto come rifiuto solido urbano ma smalitirlo negli appositi centri di raccolta.
- Il prodotto contiene una batteria ed è quindi necessario rimuoverla separandola dal resto del prodotto seguendo le istruzioni riportate di seguito prima di procedere al suo smaltimento.
- Un uso improprio o uno smaltimento non corretto potrebbe avere effetti negativi sulla salute umana e sull'ambiente.
- Per lo smaltimento vanno utilizzati i sistemi di raccolta pubblici o privati previsti dalle leggi locali.
- In caso di smaltimento abusivo dei rifiuti elettrici ed elettronici sono previste sanzioni stabilite dalle vigenti normative locali in materia di smaltimento.
- Do not dispose of the product as municipal waste; it must be disposed of through specialist waste disposal centres.*
- The product contains a battery that must be removed and separated from the rest of the product according to the instructions provided, before disposing of the product.*
- Improper use or incorrect disposal of the product may negative effects on human health and on the environment.*
- The public or private waste collection systems defined by local legislation must be used for disposal.*
- In the event of illegal disposal of electrical and electronic waste, the penalties are specified by local waste disposal legislation.*

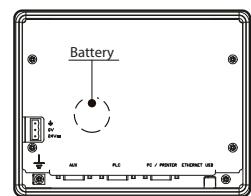

Fig.9

Smaltimento del prodotto: l'apparecchiatura (o il prodotto) deve essere oggetto di raccolta separata in conformità alle vigenti normative locali in materia di smaltimento. / **Disposal of the product:** the appliance (or the product) must be disposed of separately in accordance with the local waste disposal legislation in force.

Dearation

The word Dearation describes the removal of dissolved gases from liquids such as air from water. When water is heated or the pressure reduced gas microbubbles are released into the system. Microbubbles can be the cause of major problems such as pump failure, corrosion and energy loss.

The Solution

As an aid to system cleaning the CleanVent range has been developed by Fabricated Products (UK) to remove potentially damaging particles from both hot and chilled water systems. It is comprised of a very fine stainless-steel Concentrator capable of stopping debris down to 5 micron. Through simple & cost effective maintenance the dirt can be flushed away to removing all the damaging particles in the system.

Features and Benefits

- It is comprised of a very fine stainless-steel Concentrator capable of stopping debris down to 5 micron.
- Greatly reduced commissioning times after initial fill.
- Longer system life (through air and dirt elimination)
- Low-pressure drop
- Bi-directional flow
- Maximum Temperature. 110 °c. Higher temperature units available on request.
- Tested to 21 bar
- All stainless steel construction.
- Air collects in the air chamber before being automatically vented
- Floating dirt can be removed by opening the valve situated under the air vent.
- The same valve is used for releasing air when filling the system
- Large collector ensures that flushing is only required now and then
- Can be flushed while fully operational (no need to shut down)
- An internal stainless steel concentrator to aid removal of air and dirt.
- Smooth surfaces with Stainless Steel lead to lower friction
- Stainless will not degrade in service thanks to its excellent resistance to corrosion.

- Stainless Steel is extensively more resistant to oxidation by water and biocides than carbon steel. Therefore Stainless Steels are not contributing to oxidation, sludge's etc;
- Thermal properties of stainless steel. They are far superior to iron or carbon steel.
- Maximum flow rate up to 3m/sec

Stainless Steel: Safe, Clean, Efficient and Hygienic

- Stainless is highly resistant against micro bacteria attacks plus lower bacteria colonization
- Hygienic and cleanable material (Smooth surface internally & externally). Due to their very high passive film (protecting the surface)
- Lower adhesion of deposits (dirt and sludge) with the smooth internals of Stainless Steels. Sludge & magnetite is washed/ removed from the collection chamber far easier than the inferior iron/ carbon steel
- Stability, Stainless Steel is basically inert in water. Leaching of alloying elements is within safe limits. As a result, they provide better quality water. No turbidity problems. All resulting in less bacterial slime, low energy consumption, low cleaning costs, good for conveying wet solids.
- Excellent durability and abrasion resistance, as Stainless Steels are resistant to crevice corrosion, cavitations and wear in pure and polluted waters as well as in atmosphere (even polluted), they are cost effective for long term use and do not cause environmental pollution.

CleanVent location

This combined unit (model ref CVAD) must be installed at the hottest part of the system (before the pumps). In a heating system this is the main flow from the boilers.

In a chilled water system the unit must be located in the return close to the chiller.

The static head must not exceed 60 metres in a Heating system.

Maximum static head must not exceed 40 metres in a chilled water system.

N.B. if the static head is greater than

Commissioning

The CleanVent requires no special commissioning. All units are fitted with a fast bleed valve, which should be used when initially filling the system. The same valve is used for draining off floating scum and also prevents the possibility of dirt clogging the air vent. Maintenance will be required to remove trapped dirt and sludge. Opening the ball valve at the bottom of the unit does this. The valve may be opened while the system is under pressure.

Scalding is a danger at high pressures

these figures the efficiency of the CleanVent & MagVent is reduced

and temperatures. Ensure that the water is safely piped to drain before opening the valve.

The system pressure will flush the dirt out. Leave the valve open until the collected dirt has been flushed out; repeat this operation every few days. Once the water is clear it may be possible to drain every 6 months or so depending on the size and age of the system.

Most of the dissolved air will be removed in a few days. However this may vary from system to system .In large systems it may take several weeks.

Dirt separators can only remove dirt that is circulating.

Flanges

All flanges are drilled to BS4504 PN16 as standard. Other flange ratings are available on request.

The CleanVent unit is maintenance free

Drain valve

All models are supplied with a ball valve for draining the collected dirt and sludge.

CLEANVENT

An Air (Deaerator) Separator.

- Thermal properties of stainless steel. They are far superior to iron or carbon steel.
- Maximum flow rate up to 3m/sec

Stainless Steel: Safe, Clean, Efficient and Hygienic

- Stainless is highly resistant against micro bacteria attacks plus lower bacteria colonization
- Hygienic and cleanable material (Smooth surface internally & externally). Due to their very high passive film (protecting the surface)
- Lower adhesion of deposits (dirt and sludge) with the smooth internals of Stainless Steels. Sludge & magnetite is washed/ removed from the collection chamber far easier than the inferior iron/ carbon steel
- Stability, Stainless Steel is basically inert in water. Leaching of alloying elements is within safe limits. As a result, they provide better quality water. No turbidity problems. All resulting in less bacterial slime, low energy consumption, low cleaning costs, good for conveying wet solids.
- Excellent durability and abrasion resistance, as Stainless Steels are resistant to crevice corrosion, cavitations and wear in pure and polluted waters as well as in atmosphere (even polluted), they are cost effective for long term use and do not cause environmental pollution.

CleanVent location

This unit (our model ref CVA) must be installed at the hottest part of the system (before the pumps). In a heating system this is the main flow from the boilers.

In a chilled water system the unit must be located in the return close to the chiller.

The static head must not exceed 60 metres in a Heating system.

Maximum static head must not exceed 40 metres in a chilled water system.

N.B. if the static head is greater than these figures the efficiency of the CleanVent & MagVent is reduced

Commissioning

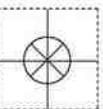

The CleanVent requires no special commissioning. All units are fitted with a fast bleed valve, which should be used when initially filling the system. The same valve is used for draining off floating scum and also prevents the possibility of dirt clogging the air vent.

Most of the dissolved air will be removed in a few days. However this may vary from system to system, In large systems it may take several weeks.

Flanges

All flanges are drilled to BS4504 PN16 as standard. Other flange ratings are available on request.

It is the policy of OMEGA Engineering, Inc. to comply with all worldwide safety and EMC/EMI regulations that apply. OMEGA is constantly pursuing certification of its products to the European New Approach Directives. OMEGA will add the CE mark to every appropriate device upon certification.

The information contained in this document is believed to be correct, but OMEGA accepts no liability for any errors it contains, and reserves the right to alter specifications without notice.

WARNING: These products are not designed for use in, and should not be used for, human applications.

Offered in liquid and gas sensor types, the general purpose flow switch provides reliable low or no-flow detection of relatively clean, non-coating media with one 1A relay output. Liquid examples in clued water and acetic acid. Available in Polypropylene-PPS or PVDF, the short flow sensor is used in pipe or ducting from ½" to 1-1/2", and the long flow sensor is used in 2" and up. The flow switch set point may be adjusted from 0.,04 to 3 fps in liquids or 1 to 90 fps in gases as a low-flow alarm. The flow sensor is best applied in applications with relatively constant temperatures.

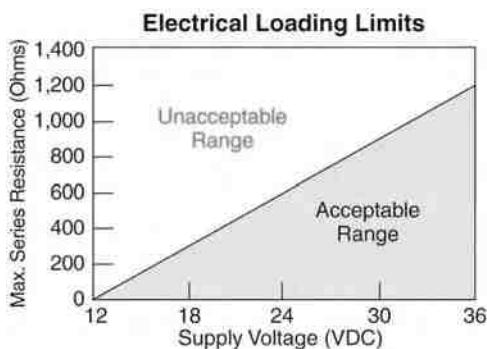

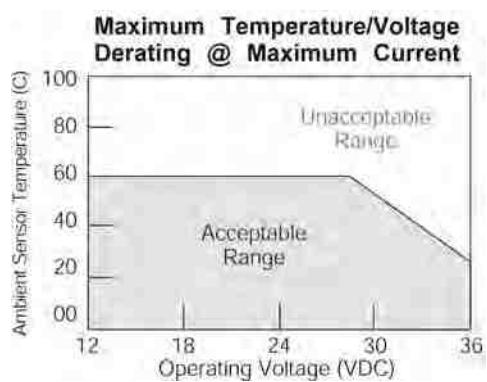

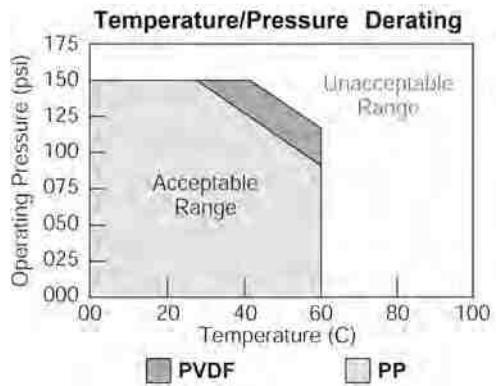

New Features

- Rugged Polypropylene-PPS or PVDF sensor for corrosive liquids and gasses.
- Adjustable set point with LED for flow or no-flow status indication.
- 60VA relay selectable NO or NC via power supply wiring polarity
- Solid State sensor is not damaged by over-ranging flow velocities.

Testing the Sensor (FST-200 Series Only):	13
Testing the Sensor (FST-300 Series Only):	14

Set point range:	FST-200: .04 to 3 fps (.012 to .91 mps)
	FST-300: 1 to .90 fps (.3 to 27 mps)
Factory set point:	FST-200: .2 fps (.06 mps)
	FST-300: 10 fps (3 mps)
Repeatability:	$\pm 5\%$ of set point @ fixed temp.
Response time:	1-10 seconds
Set point adjust.:	Potentiometer
LED indication:	Flow Status
Viscosity range:	1-200 centipoise (FST-200 series only)
Supply Voltage:	14-36 VDC
Consumption:	70 mA maximum
Contact type:	(1) SPST relay
Contact rating:	60 VA, 1A max
Contact output:	Selectable NO/NC
Process temp.:	F: 32° to 140° C: 0° to 60°
Electronics temp.	F: -40° to 140° C: -40° to 60°
Pressure:	150 psi (10 bar) @ 25°C., derated @ 1.667 psi (.113 bar) per °C. Above 25°C.
Sensor rating:	NEMA 4X (IP65)
Sensor Material:	FST-211/-221/-321/-323: PP-PPS FST-212/-222/-322/-324: PVDF
Cable jacket mat.:	FST-211/-221/-321/-323: PP FST-212/-222/-322/-324: PFA
Cable type:	4-conductor, #22 AWG (shielded)
Cable length:	10' (3m)
Process mount:	3/4" NPT (3/4" G/Rp)
Mount. Gasket:	FKM (G version only)
Classification:	General purpose
CE compliance:	EN 61326 EMC EN 61010-1 safety

⚠ Make a Fail-Safe System: Design a fail-safe system that accommodates the possibility of switch and/or power failure. OMEGA ENGINEERING recommends the use of redundant backup systems and alarms in addition to the primary system. Adding a redundant alarm switch to the system is a cost effective means to prevent costly run-dry issues.

Long Sensor (FST-221/-222/-323/-324)**Short Sensor (FST-211/-212/-321/-322)****Configurations (Liquid Flow Switches):**

Part Number	Length	Material (body)	Material (cable)	Thread (inside x outside)
FST-211-SPST	Short (3")	PP-PPS	Polypropylene	3/4" NPT x 3/4" NPT
FST-212-SPST	Short (3")	PVDF	PFA	3/4" NPT x 3/4" NPT
FST-221-SPST	Long (4.5")	PP-PPS	Polypropylene	3/4" NPT x 3/4" NPT
FST-222-SPST	Long (4.5")	PVDF	PFA	3/4" NPT x 3/4" NPT

Configurations (Gas Flow Switches):

Part Number	Length	Material (body)	Material (cable)	Thread (inside x outside)
FST-321-SPST	Short (3")	PP-PPS	Polypropylene	3/4" NPT x 3/4" NPT
FST-322-SPST	Short (3")	PVDF	PFA	3/4" NPT x 3/4" NPT
FST-323-SPST	Long (4.5")	PP-PPS	Polypropylene	3/4" NPT x 3/4" NPT
FST-324-SPST	Long (4.5")	PVDF	PFA	3/4" NPT x 3/4" NPT

Note: The above products ship with a standard 10' cable length. Adding “-25” to the end of the part number indicates that the product has a 25' cable length (ex. FST-211-SPST-25). Adding “-50” to the end of the part number indicates that the product has a 50' cable length (ex. FST-321-SPST-50).

! About this Manual: PLEASE READ THE ENTIRE MANUAL PRIOR TO INSTALLING OR USING THIS PRODUCT. This manual includes information on all models of Omega Engineering Thermal Dispersion Flow Switches: FST-200 and FST-300 series. Please refer to the part number located on the switch label to verify the exact model which you have purchased.

! User's Responsibility for safety: Omega Engineering manufactures a wide range of flow switches and technologies, while each of these sensors is designed to operate in a wide variety of applications; it is the user's responsibility to select a sensor model that is appropriate for the application, install it properly, perform tests of the installed system, and maintain all components. The failure to do so could result in property damage or serious injury.

! Proper Installation and Handling: Because this is an electrically operated device, only properly trained staff should install and/or repair this product. Use a proper sealant with all installations. **Note:** Always install the 3/4" FKM gasket with all versions of Flow switches with metric threads. The G threaded version will not seal unless the gasket is properly installed. Never over tighten the sensor within the fitting, beyond a maximum of 80 inch-pounds torque. Always check for leaks prior to system start-up.

! Material Compatibility: The FST-200 and FST-300 series sensors are available in two different wetted materials. Models FST-211/-221/-321/-323 are made of Polypropylene (PP) with PPS tips. Models FST-212/-222/-322/-324 are made of Polyvinylidene Fluoride (PVDF). Make sure that the model you have selected is compatible with the application liquid. To determine the chemical compatibility between the sensor and its application liquids, refer to an industry reference such as the Compass Corrosion.

! Wiring and Electrical: The supply voltage used to power the sensor should never exceed a maximum of 36 volts DC. Electrical wiring of the sensor should be performed in accordance with all applicable national, state, and local codes.

! Flammable, Explosive and Hazardous Applications: DO NOT USE THE FST-200 or FST-300 SERIES GENERAL PURPOSE FLOW SWITCHES IN HAZARDOUS LOCATIONS.

! Warning !

- ! The rating for the relay is 60 VA, 1Amp max.**
- ! Omega Engineering's Thermal Dispersion flow switches are not recommendable for use with electrically charged application liquids. For most reliable operation, the liquid being measured may need to be electrically grounded.**
- ! The sensing tip of the sensor must always be submersed in the liquid and never exposed to air.**
- ! The liquid temperature must remain constant and not change throughout the process.**

Technology: The Thermal Dispersion flow switches measure liquid or gas temperature to determine changes in flow velocity. As fluid flows across the sensing tips, the temperature is reduced proportionately as a function of the flow rate. When a temperature or velocity shift reaches the user defined set point, the switch changes state indicating the appropriate flow condition (flow or no-flow).

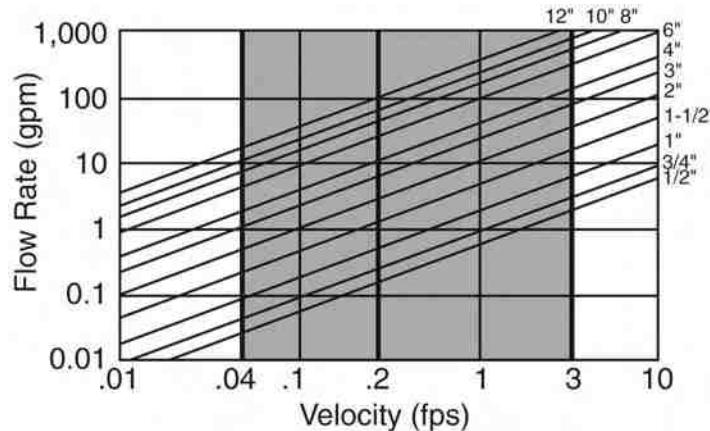

OMEGA ENGINEERING's sophisticated electronics convert the temperature shift into a signal which indicates whether a flow or no-flow condition occurs. Depending on how the sensor is wired, this signal may be wired for normally open or normally closed circuits.

OMEGA ENGINEERING's Thermal Dispersion flow switches have no moving parts to clog or foul, making them suitable for a verity of applications, including non-coating and non-scaling liquids. The FST-200 series directly measure mass flow and can operate over board range of liquids from 0.4 to 1.2 specific gravity and 1 to 300 cp.

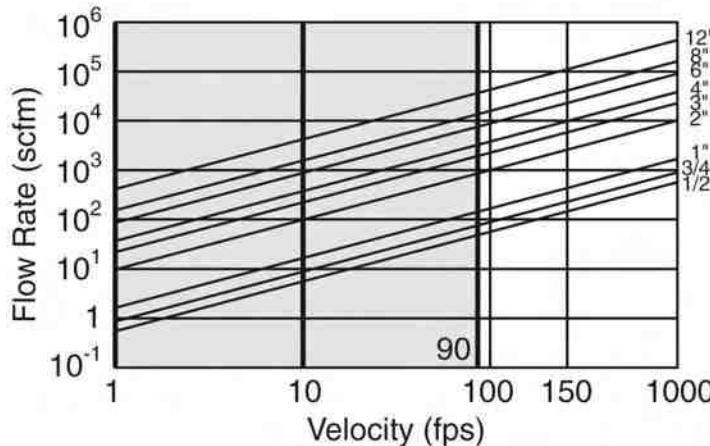

Initializing Sequence for FST-200 series: When the flow switch is powered up while submersed, the FST-200 series will immediately indicate flow before switching to its correct state. A time delay may be used to eliminate the initialization sequence. Omega Engineering's thermal dispersion relay controllers feature a 0 to 60 second time delay for your convenience.

Set Points: The FST-200 series liquid flow switch set point is factory calibrated to 0.2 fps and the FST-300 gas flow switch are set to 10 fps. To convert feet/sec to GPM, please refer to the chart below.

**FST-200 Series
Flow Rate vs. Velocity
(gpm vs. fps)**

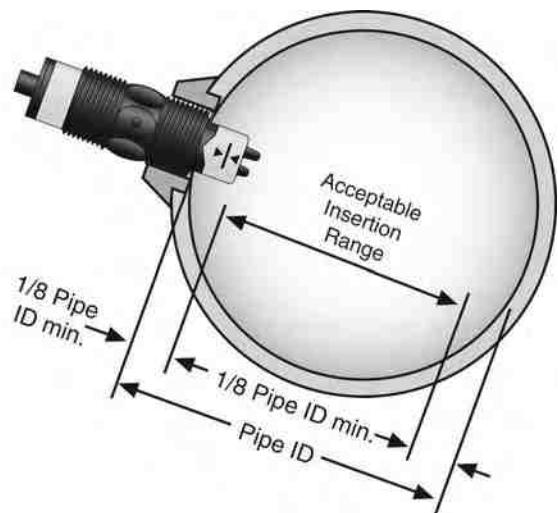

**FST-300 Series
Flow Rate vs. Velocity
(scfm vs. fps)**

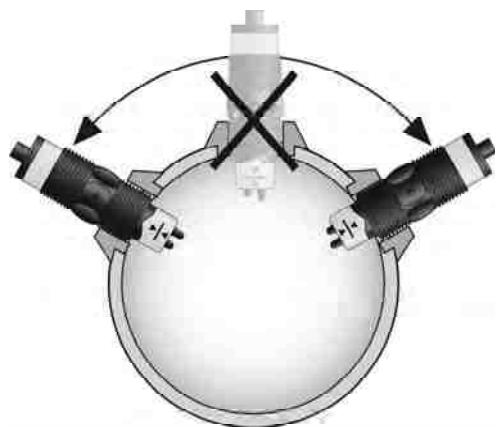

The FST-200 series flow switch must always be in contact with the liquid being measured. The FST-300 series flow switch must never be submerged in liquid. Both flow switches feature a 3/4" NPT threads which will allow it to be used with various types of fittings. Be sure to check the insertion depth of the flow switch in the fitting after it is installed. See the diagram to the right for the recommended insertion depth.

- The two tip of the sensor are to be perpendicular to the flow (as seen to the right). Never mount the tips with one in front of the other.

When using any type of fitting, the orientation as well as the insertion depth of the flow switch in the pipe is critical. See the diagram to the right for the recommended orientation.

⚠ Warning !

- ⚠ The flow switch tips have a thin plastic wall which may be damaged if dropped or installed improperly.
- ⚠ The FST-200 series flow switch is designed for use in liquid. For best results, avoid installing the FST-200 series where bubbles are present or where the tips of the switch may be out of the liquid.
- ⚠ The FST-300 series flow switch is designed for use in gas applications. For best results, avoid installing the FST-300 series where it may be submerged in liquid.
- ⚠ Always install the FKM gasket with all versions of the model FST-212/-222/-322/-324. The G threaded version will not seal unless the gasket is properly installed.
- ⚠ The two temperature probes (tips) must always be perpendicular to the flow (see the flow at the same time).

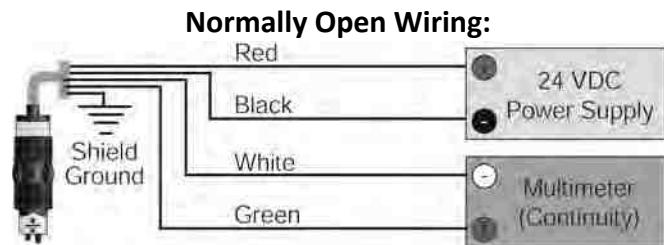

Supply Voltage: The supply voltage to the Thermal Dispersion flow switch should never exceed a minimum output of 14 VDC or maximum output of 36 VDC.

Required Cable Length: Determine the length of the cable required between the Thermal Dispersion flow switch and its point of termination. Allow enough slack to ensure the easy installation, removal and/or maintenance of the sensor. The cable length may be extended up to a maximum of 1000 ft, using a well-insulated 14 to 20 gauge shielded four conductor cable.

Wire Stripping: Using a 10 gauge wire stripper, carefully remove the outer layer of insulation from the last 1-1/4" of the sensor's cable. Unwrap and discard the exposed foil shield from around the signal wires, leaving the drain wire attached if desired. With a 20 gauge wire stripper, remove the last 1/4" of the colored insulation from the signal wires.

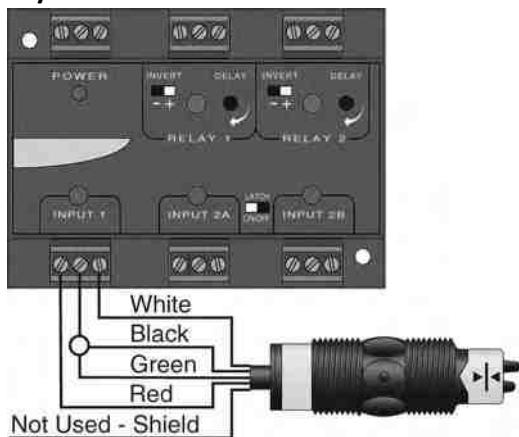

Signal Output (Relay Switching):

Allows the sensor to switch a small load on or off directly, using an internal relay rated below 60 VA. The NO/NC status is set by the polarity of the voltage feeding the red and black wires. The green wire is the common for the relay and the white wire is the NO or NC, depending on the polarity of red and black.

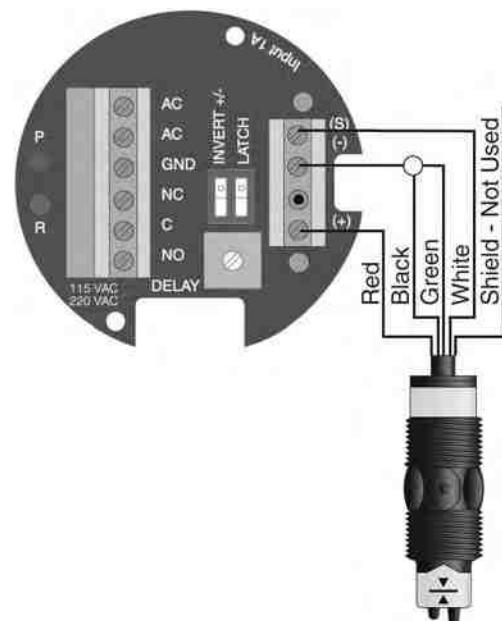

Wiring to an Omega Engineering Controller:

LVCN-131/-141 Series Controller

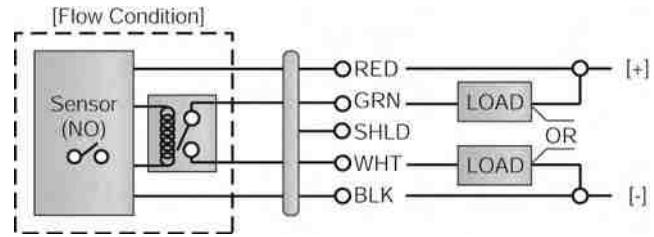

FLCN-100 Series Controller

Wiring the Relay Output: The Flow switch relay output can be wired as a dry contact to a VDC or VAC power source. The flow switch does require 14-36 VDC power to operate the sensor and switch the relay. All installations below identify a dry switch state as the normal position of the relay.

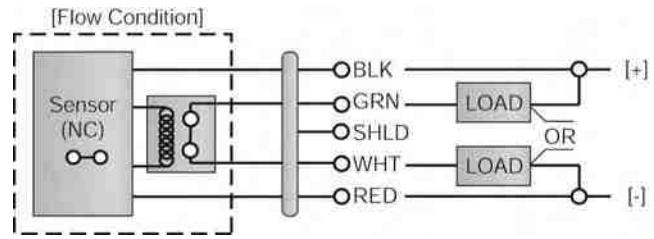

Switching a Normally Open DC Load (Open during Flow, Closed during No-Flow):

The Red wire connects to Positive (+) of the power supply and the Black wire connects to Negative (-). The LOAD can be attached to either the Green or White wires. Complete the circuit by connecting the Green to (+) VDC power or White to (-) VDC power (see illustration to the right).

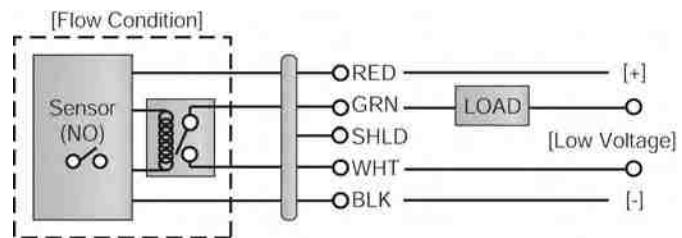

Switching a Normally Closed DC Load (Closed during Flow, Open during No-Flow):

The Black wire connects to positive (+) of the power supply and the Red wire connects to Negative (-). The Load can be attached to either the Green or White wires. Complete the circuit by connecting the Green to (+) VDC power or White to (-) VDC power (see illustration to the right).

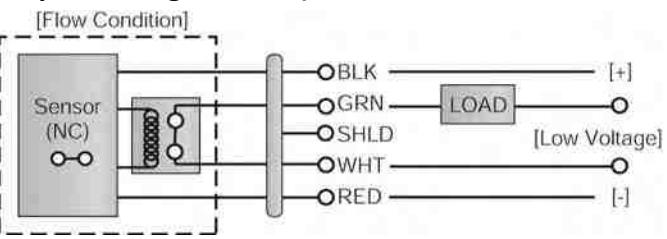

Switching a Normally Open AC Load (Open during Flow, Closed during No-Flow):

The Red wire connects to Positive (+) of the DC power supply and the Black wire connects to Negative (-). The LOAD can be attached to the Green wire and the Hot of the VAC power. Connect the white to the Neutral of the VAC power (see illustration to the right). Low voltage VAC is less than 36 VAC.

Switching a Normally Closed AC Load (Closed during Flow, Open during No-Flow):

The Black wire connects to Positive (+) of the DC power supply and the Red wire connects to Negative (-). The LOAD can be attached to the Green wire and the Hot of the VAC power. Connect the White to the Neutral of the VAC power (see illustration to the right). Low voltage VAC is less than 36 VAC.

For all Sensor Wiring diagrams above:

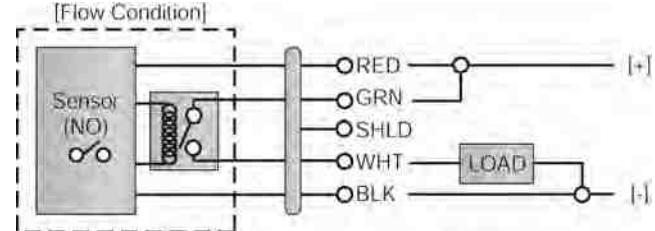

Sensor Power: Red and Black Wires (36 VDC Max.)

Relay Rating: Green and White Wires (60VA, 1A Max.)

Wiring as a P-Channel or N-Channel output: The Flow switch can be substituted for either a P-Channel (PNP, Sourcing) output or N-Channel (NPN, sinking) output.

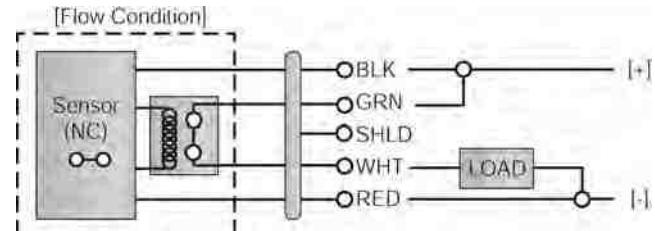

Normally Open DC Load as a P-Channel Output (Open during Flow, Closed during No-Flow):

To wire as a NO P-Channel output follow the directions below. The Red Wire connects to Positive (+) of the power supply and the Black wire connects to Negative (-). The Green wire is jumping to the Red wire while the White wire is connected to the LOAD. Jumper the LOAD back to the Negative (-) to complete the circuit.

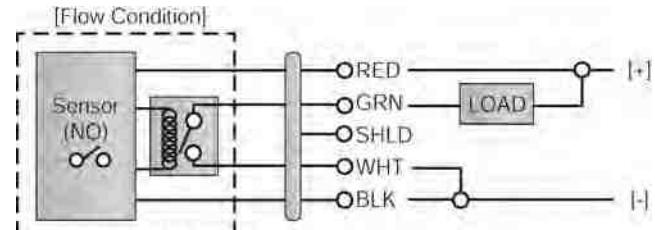

Normally Closed DC Load as a P-Channel Output (Closed during Flow, Open during No-Flow):

To wire as a NC P-Channel output, follow the directions below. The Black wire connects to Positive (+) of the power supply and the Red wire connects to Negative (-). The Green wire is jumping to the Black wire while the White wire is connected to the LOAD. Jumper the LOAD back to the Negative (-) to complete the circuit.

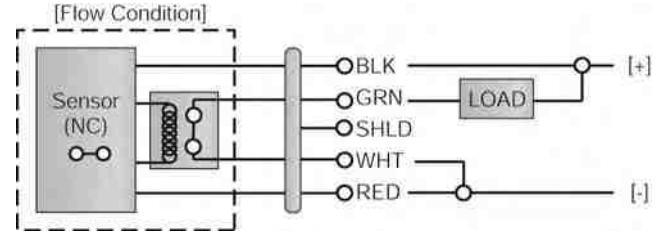

Normally Open DC Load as a N-Channel Output (Open during Flow, Closed during No-Flow):

To wire as a NO N-Channel output, follow the directions below. The Red wire connects to Positive (+) of the power supply and the Black wire connects to Negative (-). The white wire is jumping to the Black wire while the Green wire is connected to the LOAD. Jumper the LOAD back to the Positive (+) to complete the circuit.

Normally Closed DC Load as a N-Channel Output (Closed during Flow, Open during No-Flow):

To wire as a NC N-Channel output, follow the directions below. The Black wire connects to Positive (+) of the power supply and the Black Wire connects to Negative (-). The white wire is jumping to the Red wire while the White wire is connected to the LOAD. Jumper the LOAD back to Positive (+) to complete the circuit.

For all Sensor Wiring diagrams above:

Sensor Power: Red and Black Wires (36 VDC Max.)

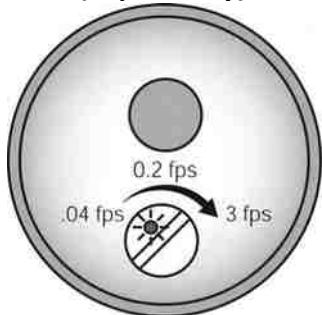

Relay Rating: Green and White Wires (60VA, 1A Max.)

Set Point: If the preset factory calibration is not adequate for your application, follow the calibration steps listed below.

Note: The switch's internal LED will be on when the switch detects no-flow and will off when the switch detects flow, regardless of the polarity of the Red and Black wires. Reversing the Red and Black wires will reverse the polarity of the relay switch, but not the internal LED.

1. Install the fitting and flow switch as described in the Installation section of this manual. Turn the flow switch and controller power on and adjust the flow rate to the application setting. If the medium to be sensed is likely to be subject to any temperature variation, the flow switch should be set as the highest normal temperature likely to be encountered.
2. Locate the potentiometer knob at the top of the flow switch. The red LED is visible through the potentiometer. The adjustment is a single turn 270° potentiometer. The initial response time of the flow switch after adjustment is 1 to 10 seconds. Adjust the potentiometer in slow increments and wait for the response.
 - a. LED is ON - If the LED is on, slowly adjust the potentiometer counter-clockwise, with a small flat head screwdriver until the LED turn off.
 - b. LED is OFF - If the LED is off, slowly adjust the potentiometer clockwise. with a small flat head screwdriver until the light turns on.
3. Adjust the potentiometer back and forth where the LED is switching, eventually settling for where the LED is OFF (this is the low flow state for the switch).
 - a. If the flow is increased, the LED will remain OFF indicating a flow condition
 - b. If the flow is decrease, the LED will turn ON indicating a no-flow condition.
4. Verify that the new calibration is correct by lowering the system flow rate below the set point and check to see that the red LED turns on. Then increase the flow rate above the set point and verify that the red LED turns off accordingly.

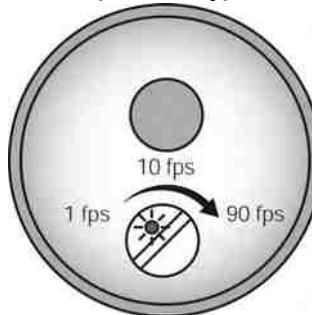

**FST-200 Series Flow Switch
(Liquid Only)**

Potentiometer Location

**FST-300 Flow Switch
(Gas Only)**

General: The Flow switch requires no periodic maintenance except to clean off any deposits or scaling from the sensor tip as necessary. It is the responsibility of the user to determine the appropriate maintenance schedule, based on the specific characteristics of the application liquids.

Cleaning Procedure:

1. **Power:** Make sure that all power to the sensor, controller and/or power supply is completely disconnected.
2. **Sensor Removal:** *Make sure that the flow is off and the pressure is down prior to removing the Flow switch.* Carefully, remove the sensor from the installation. Replace the sensor with a 3/4" NPT plug to insure that the liquid does not leak out during this procedure. *Do not re-install the Flow switch if the threads are damaged.*
3. **Cleaning the sensor:** Use a soft bristle brush and mild detergent, carefully wash the Thermal Dispersion flow switch. Do not use harsh abrasives such as steel wool or sandpaper, which might damage the surface sensor. Do not use incompatible solvents which may damage the surface sensor. Do not use incompatible solvents which may damage the sensor's PP/Ryton or PVDF plastic body.
4. **Sensor Installation:** Follow the appropriate steps of installation as outlined in the installation section of this manual.

Testing the Sensor (FST-200 Series Only):

1. **Immersing the switch:** Place the switch in a cup of water. Make sure the tips are submersed in the water.
2. **Power:** Turn on power to the switch with Red to (+) and Black to (-). You can reverse the polarity if desired.
3. **No-Flow/Flow Test:** With the switch setting still in the cup, wait until the Red LED turns ON (no-flow condition).
 - a. Swirl the switch in the cup and wait until the Red LED turn OFF (flow condition).
 - b. Stop swirling the sensor and let it rest in the cup waiting for the Red LED to turn ON again (no-flow condition).
 - c. Repeat the above two steps.
4. **Relay Test:** Connect a multimeter (set to read Ohms) to the White and Green Wires. Perform the above No-Flow/Flow test with the multimeter connect to observe the actuation of the relay.
 - a. With Red to (+) and Black to (-), the multimeter will read a small resistance during no-flow (closed relay) and OL during a flow condition (open relay).
 - b. Reverse Polarity [Red to (-) and Black to (+)] to see the multimeter read OL during a no-flow state (open relay) and a small resistance during a flow condition (closed relay).

The No-Flow/Flow test determines if the switch is capable of sensing the changes between no-flow and flow. The Relay test determines the ability of the relay to switch between a no-flow and flow condition. This is the basic test to determine functionality of the sensor.

Testing the Sensor (FST-300 Series Only):

1. **Creating a No-Flow Test Point:** The purpose of this step is to create a no-flow state for the sensor to be tested against. Since this is a low flow switch, even a buildings HVAC system can create a flow that the sensor can read.
 - a. Place the switch on a table and place an empty cup over the sensing tips.
 - b. The cup will act like a shield to protect the sensor from air flow.
2. **Power:** Turn on power to the switch with Red to (+) and Black to (-). You can reverse the polarity if desired.
3. **No-Flow/Flow Test:** With the switch setting still under the cup, wait until the Red LED turns ON (no-flow condition).
 - a. Remove the cup and move the sensor in air and observe when the Red LED turn OFF (flow condition).
 - b. Place the sensor on the table and place the cup over the sensor and let it rest waiting for the Red LED to turn ON again (no-flow condition).
 - c. Repeat the above two steps.
4. **Relay Test:** Connect a multimeter (set to read Ohms) to the White and Green Wires. Perform the above No-Flow/Flow test with the multimeter connect to observe the actuation of the relay.
 - a. With Red to (+) and Black to (-), the multimeter will read a small resistance during no-flow (closed relay) and OL during a flow condition (open relay).
 - b. Reverse Polarity [Red to (-) and Black to (+)] to see the multimeter read OL during a no-flow state (open relay) and a small resistance during a flow condition (closed relay).

The No-Flow/Flow test determines if the switch is capable of sensing the changes between no-flow and flow. The Relay test determines the ability of the relay to switch between a no-flow and flow condition. This is the basic test to determine functionality of the sensor.

WARRANTY/DISCLAIMER

OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of **13 months** from date of purchase. OMEGA's WARRANTY adds an additional one (1) month grace period to the normal **one (1) year product warranty** to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA's WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components in which wear is not warranted, include but are not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by the company will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESSED OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a "Basic Component" under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS/INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA'S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR **WARRANTY** RETURNS, please have the following information available BEFORE contacting OMEGA:

1. Purchase Order number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

FOR **NON-WARRANTY** REPAIRS, consult OMEGA for current repair charges. Have the following information available BEFORE contacting OMEGA:

1. Purchase Order number to cover the COST of the repair,
2. Model and serial number of the product, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA's policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.

Rosemount 2110 Compact Vibrating Fork Liquid Level Switch

- Function virtually unaffected by flow, turbulence, bubbles, foam, vibration, solids content, coating, properties of the liquid, and product variations
- No need for calibration and requires minimum installation procedures
- Polarity insensitive and short circuit protection
- Industry standard plug/socket connection
- No moving parts or crevices means virtually no maintenance
- Electronic, self-checking, and condition monitoring - Heartbeat LED gives status and health information
- Magnetic test point makes functional test easy
- Compact design, small in size and weight
- "Fast Drip" Fork Design gives quicker response time especially with viscous liquids
- Hygienic connections

Reliable Performance...In Challenging Applications

MEASUREMENT PRINCIPLE

The Rosemount 2110 is designed using the principle of a tuning fork. A piezo-electric crystal oscillates the forks at their natural frequency. Changes to this frequency are continuously monitored. The frequency of the vibrating fork sensor changes depending on the medium in which it is immersed. The denser the liquid, the lower the frequency.

When used as a **low level alarm**, the liquid in the tank or pipe drains down past the fork, causing a change of natural frequency that is detected by the electronics and switches the output state.

When the 2110 is used as a **high level alarm**, the liquid rises in the tank or pipe, making contact with the fork which then causes the output state to switch.

KEY FEATURES AND BENEFITS

- Virtually unaffected by turbulence, foam, vibration, solids content, coating, or liquid properties
- Stainless steel housing and plug/socket connection for the fast fit, high volume user
- Compact and lightweight design for side or top mounting
- The industry standard DIN 43650 plug/socket is used for a fast connection. The polarity insensitivity and short circuit protection make electrical hook-up safe and easy
- The 2110 is designed for operation in temperatures from -40 to 302 °F (-40 to 150 °C)
- The 'heartbeat' LED gives status and health information on the 2110
- 'Fast Drip' fork design gives quicker response time, especially with viscous liquids
- Rapid wet-to-dry time for highly responsive switching
- Fork shape is optimized for hand polishing to meet hygienic requirements
- No moving parts or crevices for virtually no maintenance

Threaded Process Connection

Tri-Clamp Process Connection

Compact And Lightweight

'Fast Drip' Forks

November 2010

Rosemount 2110

Fit and Forget

- Once installed, the 2110 is ready to go.
It needs no calibration and requires minimum installation
- The 'heartbeat' LED gives an instant visual indication that the unit is operational
- Functional testing of the instrument and system is easy with a magnetic test point
- You can install, and forget it

Superior Performance

- Functionality is virtually unaffected by flow, turbulence, bubbles, foam, or vibration
- The 'Fast Drip' design allows the liquid to be quickly drawn away from the fork tip, making the 2110 quicker and more responsive in high density or viscous liquid applications
- With a user-selectable time delay feature, the risk of false switching is minimized in turbulent or splashing applications

APPLICATIONS

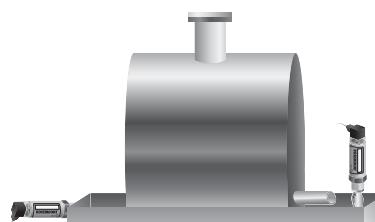

- Overfill protection
- High and low level alarms
- Leak detection
- Run dry or pump protection
- Pump control or limit detection
- Hygienic applications

Rosemount 2110

Compact Vibrating Fork Liquid Level Switch

2110 Level Switch

Rosemount 2110 capabilities include:

- Rugged stainless steel body and fork, the ideal choice for OEM applications
- Compact design, small and lightweight, perfect for small tank or pipe installations
- Short fork or semi-extended lengths
- Direct load switching or PNP/PLC electronics
- Safe area only

Rosemount 2110

Specifications

PHYSICAL

Product

Rosemount 2110 Compact Liquid Level Switch

Measuring principle

Vibrating Fork

Applications

Most liquids including coating liquids, aerated liquids, and slurries

Mechanical

Process Material

316L Stainless Steel (1.4404)

For Tri-Clamp connection, hand polished to better than 0.8 µm. Gasket material for 1 in. BSPP (G1) is Non-asbestos BS7531 Grade X carbon fiber with rubber binder.

Housing Materials

Body: 304 SST with polyester label

LED window:

Flame retardant Polyamide (Pa12) UL94 V2

Plug: Polyamide glass reinforced

Plug seals: Nitrile butadiene rubber

Mounting

- 3/4-in. BSPT (R) or NPT
- 1-in. BSPT (R) or BSPP (G) thread, or
- Hygienic 2-in. (51 mm) Tri-clamp fitting

Dimensional Drawings

See "Dimensional Drawing" on page 7

Ingress of Protection Rating

IP66/67 to EN60529

PERFORMANCE

Hysteresis (water)

±0.039-in. (± 1 mm) nominal.

Switching Point (water)

0.5 in. (13 mm) from fork tip if mounted vertically.

0.5 in. (13 mm) from the fork edge if mounted horizontally.

The switch point varies with different liquid densities.

FUNCTIONAL

Maximum Operating Pressure

(The final rating depends on the process connection)

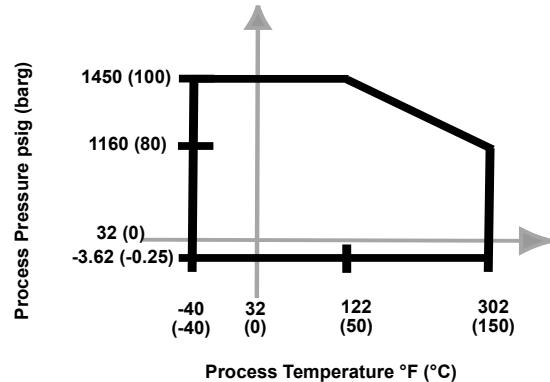

Threaded Connection

See Figure 1

Hygienic Connection

435 psig (30 barg)

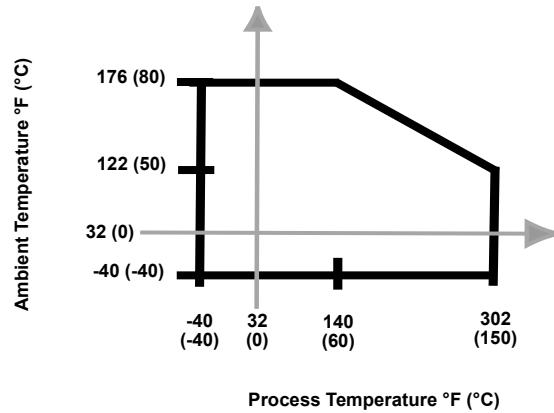

Figure 1. Process Pressure

Temperature

See Figure 2 for the maximum and minimum operating temperatures.

Figure 2. Temperature

Liquid Density

Minimum 37.5 lb/ft³ (600 kg/m³)

Liquid Viscosity Range

0.2 to 10000 cP (centiPoise)

Solids Content and Coating

Maximum recommended diameter of solid particles in the liquid is 0.2 in. (5 mm).

For coating product, avoid 'bridging' of forks.

Switching Delay

1 second dry-to-wet or wet-to-dry

CIP (Clean In Place) Cleaning

Withstands steam cleaning routines up to 302 °F (150 °C)

Electrical

Switching Mode

User selectable (Dry=on or Wet=on) by selecting plug wiring

Cable Connection

Via 4-way plug provided (DIN43650).

Max. conductor size is 15AWG.

4-position orientation (90/180/270/360 deg.).

Conductor Size

Maximum 0.06 in.² (1,5 mm²)

Cable Gland

PG9 provided. Cable diameter 0.24 to 0.31 in. (6 to 8 mm)

Protection

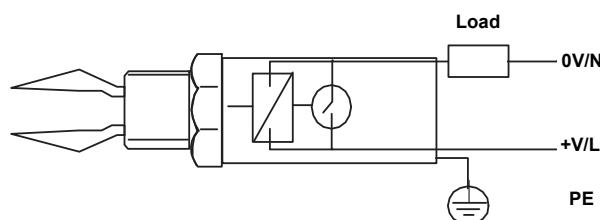

Polarity insensitive. Over-current, short circuit, and load-missing protection. Surge protection to IEC61326.

Grounding

The 2110 should always be grounded either through the terminals or using the external ground connection provided.

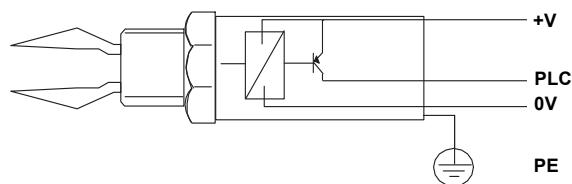

Direct Load Switching (Electronics Type Code 0)

Operating Voltage	21 to 264 Vac (50 to 60 Hz)/dc
Maximum switched load	500 mA
Maximum peak load	5 A for 40 ms max.
Minimum switched load	20 mA continuous
Voltage drop	6.5 V @ 24 Vdc / 5 V @ 240 Vac
Current draw (load off)	<3.0 mA continuous

PNP Switching (Electronics Type Code 1)

Operating Voltage	18 to 60 Vdc
Maximum switched load	500 mA
Maximum peak load	5 A for 40 ms max.
Voltage drop	<3 V
Supply Current	3 mA nominal
Output current (load off)	<0.5 mA

Product Certifications

L.V. Directive

EN61010-1 Pollution degree 2,
Category II (264V max),
Pollution degree 2, Category III (150 V maximum)

Electro Magnetic Compatibility (EMC) Directive

EN61326

Overfill Protection

If required, select Product Certificates code U1 for DIBt/WHG overfill protection.

The approval number is Z-65.11-236.

Canadian Registration Number (CRN)

The CRN is 0F04227.2C for model numbers with a NPT threaded process connection selected.

Rosemount 2110

Rosemount Level Solutions

Emerson provides a complete range of Rosemount products for level measurement applications.

Vibrating Fork Switches – Point Level Detection

For high and low alarms, overfill protection, pump control, including wide pressure and temperature requirements, and hygienic applications. Flexible mounting. Immune to changing process conditions and suitable for most liquids.

The product line consists of:

- Rosemount 2160 Wireless
- Rosemount 2130 Enhanced
- Rosemount 2120 Full-featured
- Rosemount 2110 Compact

Differential Pressure – Level or Interface Measurement

Flexible mounting for liquid tank levels, including those with wide temperature and pressure requirements. Can be isolated by valves. Unaffected by: vapor space changes, surface conditions, foam, corrosive fluids, internal tank equipment. Optimize performance with direct mount, Tuned-System Assemblies:

- Rosemount DP Level Transmitters and Remote Seals
- Rosemount 3051S_L, 3051L, and 2051L Liquid Level Transmitters

Ultrasonic – Level Measurement

Top mounted, non-contacting for simple tank and open air level measurements. Unaffected by fluid properties such as: density, viscosity, dirty coating, and corrosiveness. Appropriate for routine applications outside of explosion proof areas.

The product line consists of:

- Rosemount 3100 Series Ultrasonic Process Level Transmitters

Guided Wave Radar – Level and Interface Measurement

Top mounted, direct level and interface measurement of liquids or solids, including those with wide temperature and pressure requirements. Unaffected by changing process conditions. Good fit for small spaces and easy swap for older technologies. The product line consists of:

- Rosemount 5300 Series – Accurate, superior performance transmitter in most applications including process vessels and control
- Rosemount 3300 Series – Versatile and easy-to-use transmitter in most liquid storage and monitoring applications

Non-contacting Radar – Level Measurement

Top mounted, direct level measurement for liquids or solids, including those with wide temperature and pressure requirements. Can be isolated by valves. Unaffected by changing process conditions. Good for dirty, coating, and corrosive applications. The product line consists of:

- Rosemount 5400 Series – Accurate, superior performance 2-wire transmitters for most liquid level applications and process conditions
- Rosemount 5600 Series – 4-wire transmitters with maximum sensitivity and performance for solids, challenging reactors, rapid level changes, and excessive process conditions

Chambers for Process Level Instrumentation

- Rosemount 9901 – High quality chambers for external mounting of level measurement and control instrumentation on process vessels

THERMAL DISPERSION FLOW SWITCHES FOR LIQUIDS

FST-200 Series

- ✓ **High Reliability—
No Moving Parts**
- ✓ **Very Low Flow
Detection—Down to
0.04 FPS Liquids**
- ✓ **Use in $\frac{1}{8}$ to
12" Pipe or Tubing**
- ✓ **SPST Relay Standard**
- ✓ **Excellent for Pump
and Valve Monitoring
of Critical Flows**

OMEGA® FST-200 Series flow switches use thermal dispersion technology to create a very accurate and economical method of sensing flow. Monitor fluids from 0.4 to 1.2 specific gravity, 1 to 300 cp, and pulsating flow from 10 to 100 pulses per minute. The sensors incorporate two temperature probes, one of which is heated. The flow of liquid reduces the temperature of the heated probe, decreasing the temperature differential with the non-heated probe. OMEGA's LVCN Series of controllers can easily be interfaced to perform a variety of control functions.

SPECIFICATIONS

Range: 0.04 to 3 fps (liquids)

Accuracy: $\pm 5\%$ of setpoint at constant temperature and flowrate

Response Time: 10 sec after initial 30 sec warm up

Setpoint Drift With Fluid

Temperature: 0.5% per °C

Voltage Input: 12 to 36 Vdc @ 70 mA

Contact Output Mode:

Selectable, NO or NC states

Fluid Temperature: 0 to 60°C

(32 to 140°F)

Maximum Fluid Pressure: PP or PVDF: 150 psi @ 25°C (77°F) derated @ 1.667 psi per °C above 25°C (77°F)

Wetted Materials: PP and PVDF

Cable Specifications: 3 m (10')

Maximum Cable Length: 305 m (1000')

Dimensions:

76.2 or 114.3 L x 26.7 mm diameter
(3.0 or 4.5 x 1.05")

FST-221-SPST
shown actual size.

114 mm
(4.5")

76 mm
(3")

FST-211-SPST
shown actual size.

To Order

Model No.	Description	Material	Size	Use With Pipe Size
FST-211-SPST	Thermal dispersion flow switch	PP/ PVDF	3.0 x $\frac{3}{4}$ NPT	$\frac{3}{4}$ to 1 $\frac{1}{2}$ "
FST-212-SPST	Thermal dispersion flow switch	PVDF	3.0 x $\frac{3}{4}$ NPT	$\frac{3}{4}$ to 1 $\frac{1}{2}$ "
FST-221-SPST	Thermal dispersion flow switch	PP/ PVDF	4.5 x $\frac{3}{4}$ NPT	2 to 12"
FST-222-SPST	Thermal dispersion flow switch	PVDF	4.5 x $\frac{3}{4}$ NPT	2 to 12"

Flow Switch Fittings For Use with 76 mm (3") Sensor Only (Also For Pulsating Flow Applications)

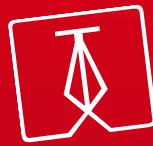

Model No.	Wetted Material	Range (GPM)	Use With Pipe/Tube ID
FT-51	PP	0.05 to 1.53	$\frac{1}{8}$ to $\frac{1}{2}$ "
FT-52	PVDF	0.05 to 1.53	$\frac{1}{8}$ to $\frac{1}{2}$ "

Comes complete with operator's manual.

Two extended cable lengths available: for 7.62 m (25') add suffix **-25** for PP/PVDF, or PVDF; for 15.24 m (50') add suffix **-50** for PP/PVDF or PVDF, for additional cost.

Note: Sizes above $\frac{1}{2}$ " fit into $\frac{3}{4}$ NPT fitting adaptor.

Ordering Examples: **FST-211-SPST**, flow switch, 3.0 x $\frac{3}{4}$ NPT size, plus **FT-51**, fitting.
FST-221-SPST, flow switch, 4.5 x $\frac{3}{4}$ NPT.

INTERFLANGES BUTTERFLY VALVES

GENERAL INFORMATION

GENERAL CHARACTERISTICS

- Concentric design
- Shut-off and regulating device
- Split shaft
- Pivot fixed by pin (or screw - option) allows demounting (demountable version)
- Long neck of the body according to Heating Systems Regulation standards
- Orange epoxy painting RAL 2002 - 80 µm
- Vacuum max 0,2 bar absolute
- Movement of disc ensured by four-squared endstem
- Certificate ATEX (Group II, Category 1/2 GD TX)
- Approved for demanding **GAS** applications by certificate DVGW

APPLICATIONS

Butterfly valves series 900 are suited for many applications where tight shut-off is required, such as:

- Industrial Processing
- Water and Wastewater
- Dry Bulk Conveying
- Light Slurry Handling
- Paper Mills
- Food and Beverage
- HVAC (Heating, Ventilating & Air Conditioning)
- Non-mining environments and explosive atmosphere consisting of dust and gas (zones 0, 1, 20 and 21)

STANDARDS

LEAK TEST:

- EN 12266-1, Rate A
- ISO 5208, Rate A
- API 598, TAB. 5

FACE TO FACE ACC.:

- EN 558, SERIES 20
- ISO 5752, SERIES 20
- API 609, TAB. 2

TOP FLANGE:

- 9 - other variant

Series name

Series 900

Models

Wafer type B

Lug type T

Double flanged type F for DN 700 – DN 1600

PRODUCT QUALITY AND CONTROL

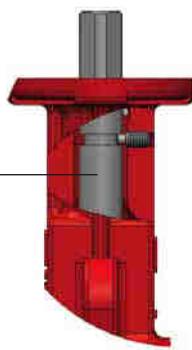

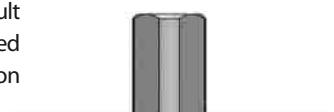

- ABO production facilities are certified in accordance to ISO 9001 quality system
- Test procedures are established according to: EN 12266-1, ISO 5208, API 598, ANSI/FCI 70-2
- Manufacture according to the requirements of the European Directive 97/23/CE – Equipment under pressure (Category III, modul B)
- All ABO valves pass pressure tests to 110% of rated pressure to ensure bubble tight shutoff
- All actuators are calibrated and cycle tested before shipment
- Material Traceability Rule – Certification is provided for all supplied valves as per customer's request
- Positive Material Identification
 - All materials are subjected to PMI testing in order to verify Material Traceability Certificate
- Certificates - Complete list of certificates can be found on www.abovalve.com

DESIGN BENEFITS

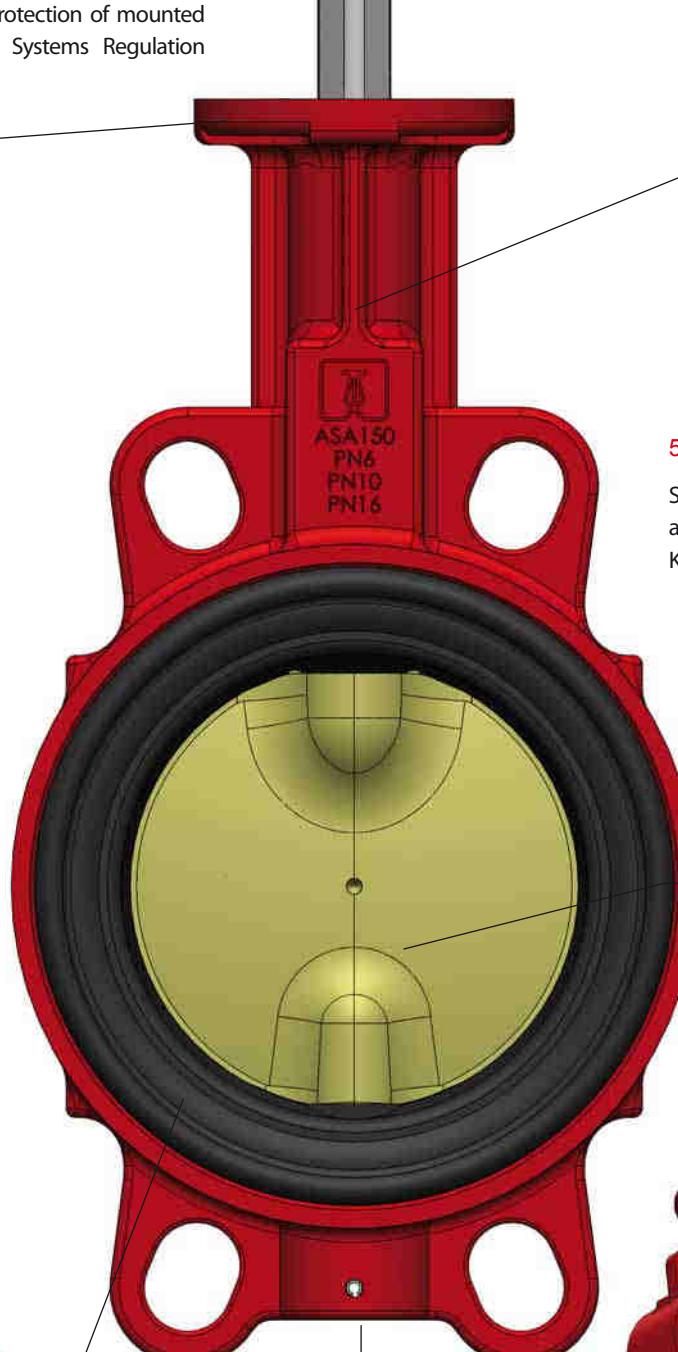

1) INTERNATIONAL STANDARD COMPATIBILITY

Top flange according to Standard ISO 5211 enables direct mounting of manual operators and power actuators. Longer necks of ABO butterfly valves result in insulation of ISO top flange (protection of mounted actuator) and meeting Heating Systems Regulation standards.

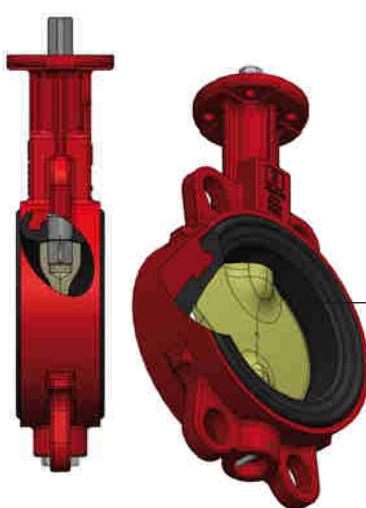

2) BLOW-OUT PROOF STEM SYSTEM

No up-movement of stem is ensured by securing pin in the body neck.

3) SEAT DESIGN

Seat is anchored in the body (groove and tongue design) and its movement is ensured by four-squared endstem.

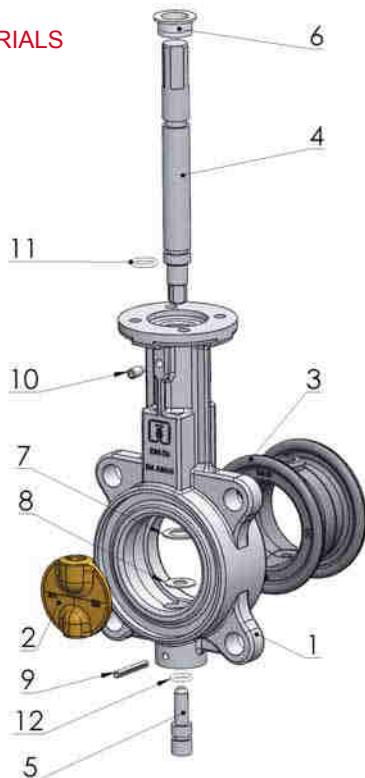

4) DEMOUNTABLE DESIGN

Pivot fitted by pin or screw according to customer's request allows demounting.

MATERIALS & TECHNICAL INFORMATION

DRAWING & MATERIALS

Execution in other material types can be provided upon request. Choice of the seat and disc materials for various media will be recommended upon specific enquiry. Max. temperatures for each material of seat are accepted only for a specific medium and short time exposure.

Item	Name	Material
1	Body	Ductile iron 0.7040 (GGG40) epoxy coated Carbon steel 1.0446 (A216 WCB) Low carbon content steel 1.1156 (A352 LCC) Stainless steel 1.4408 (CF8M)

WORKING CONDITIONS

- **Max working pressure** o DN 32 - 600: 16 bar
o DN 700 - 1600: 10 bar (16 bar upon request)
- **Temperature range - max:** - 30°C + 150°C (- 22°F + 302°F), depends on material selection

When temperature of medium increases over + 120 °C, the max allowed pressure falls from 16 bar to 14,4 bar and from 10 bar to 9 bar

COATING

- Standard coating is orange epoxy painting RAL 2002 - 80 µm
- Based on customer's request, it is possible to modify the colour or provide higher degree of coating

ACTUATION & TORQUES

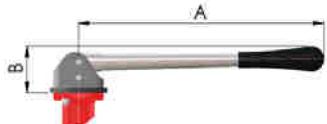

ACTUATION POSSIBILITIES

All ABO handles, manual gear operators, pneumatic and electric actuators can be mounted directly to ABO butterfly valves, thus eliminating brackets or couplings. This allows for simple installation in the field, minimizes possible misalignment and decreases overall height.

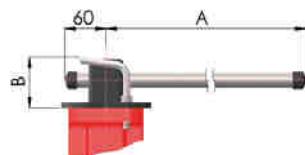

MANUAL ACTUATION: HANDLEVER

For manual actuation, ABO offers levers in carbon steel material with protective coating for excellent corrosion, abrasion and impact resistance. A lever in stainless steel material is an option. ISO top flange connection is F05 for sizes DN 50 and 65, and F07 for sizes DN 80-200, respectively. Handlever in regulating design optional.

MANUAL GEARBOX WITH HANDWHEEL

ABO gearbox series of manual actuators combines state of art production technology, with cast iron and pressed steel construction, to provide a smooth and trouble-free operation for heavy duty on-off and throttling service of ABO valves. The rugged, cast iron body seals is weatherproof to IP65. A self-locking gearing holds the valve in the desired position. Further features include a readily accessible handwheel, adjustable stopcrew for closed position, removable splined drive bush with indexing facility and a facility to lock handwheel with padlock and chain. Gearboxes, as well as handlevers, can be supplemented with contacts for signalization of endpoints.

ACTUATORS

- PNEUMATIC ACTUATORS - ABO pneumatic actuators Series 95 are rack and pinion, opposed-piston actuators available in two versions: single acting & double acting
- ELECTRIC ACTUATORS - ABO series 97 electric actuators are designated for quarter turn operating application. Electric actuators of 24V, 230V and 400V can be installed on ABO butterfly valves.

OPERATING TORQUES UPON WORKING PRESSURE (NM)*

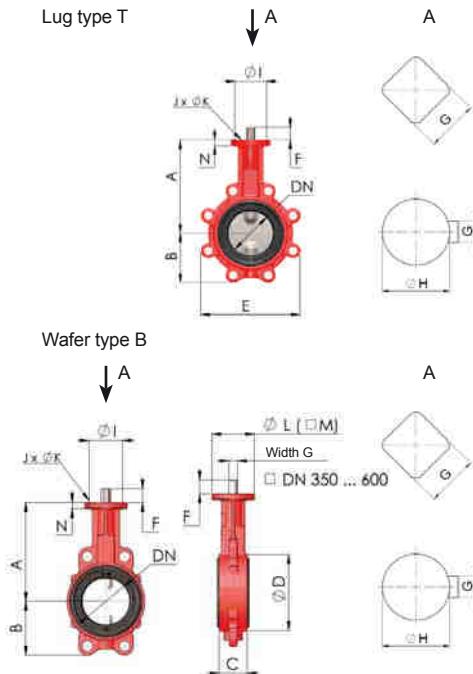

DN	32/40	50	65	80	100	125	150	200	250	300	350	400	450	500	600
PMA 6 bar	6	8	15	20	38	55	70	100	150	235	480	750	1180	1380	2050
PMA 10 bar	8	10	17	25	46	70	80	125	220	290	530	1200	1550	2050	2700
PMA 16 bar	10	12	20	30	55	85	100	150	290	380	580	1650	2100	2700	3750

DN	700	800	900	1000	1200	1400	1600
PMA 10 bar	3500	4500	6000	8950	12600	18500	24400

The above mentioned torques are valid for valves with EPDM seat only, and under the condition that the working medium is liquid. While actuating the valve, the above mentioned figures should be multiplied by a coefficient of 1,2. Using a NBR seat, it is necessary to apply a coefficient of 1,8 for dimensions up to DN 300 and a coefficient of 1,32 for dimensions DN 350 and above. In case the medium is gaseous, or if it contains abrasive particles, it is necessary to apply a secondary coefficient of 1,35. If the working conditions are specific, it is recommended to discuss the selection of the actuator with the manufacturer.

LUG butterfly valve

Shut-off valves

Application fields

WATER

CONDITIONING

GAS

HEATING

DRINKING WATER

INDUSTRY

FIRE FIGHTING

The shut-off LUG butterfly valves in Series L9, with a centred Disc and LUG type body, are made of ductile iron, manufactured in accordance with severe product norms and in conformity to EN ISO 9001.

These valves are suitable for heating and conditioning (HVAC), water treatment and water distribution, industrial applications, agricultural purposes, for compressed air, gas, oils and hydrocarbon.

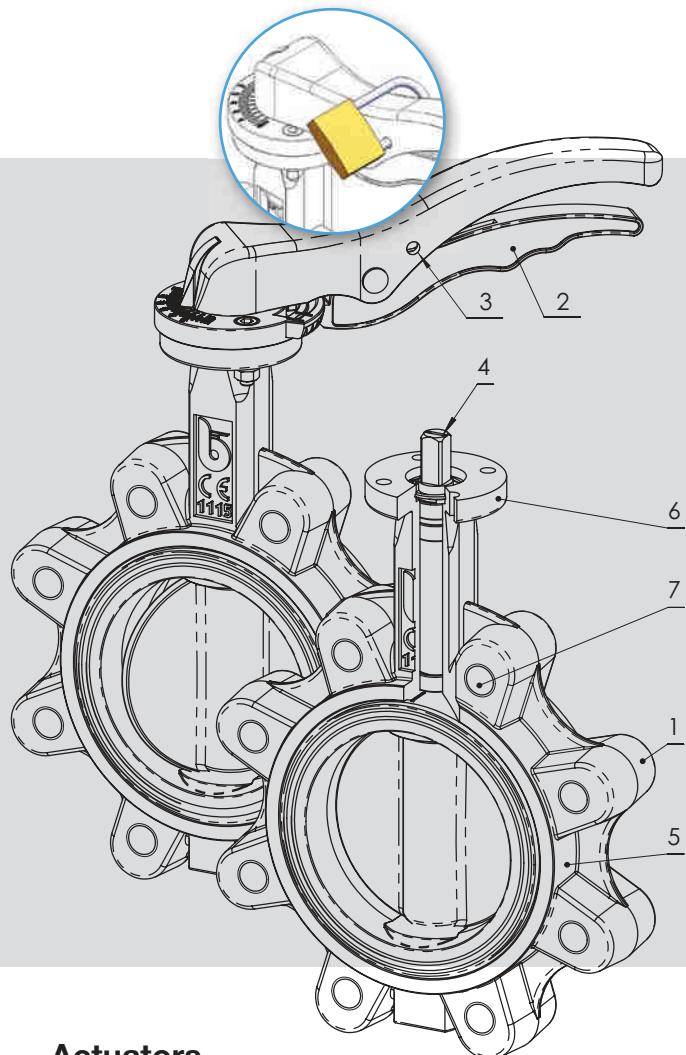

(Please ensure the choice of the corresponding item)

YES: for in line and end of line installation with frequent actuation; the integrated support, in accordance with ISO 5211, allows easy mounting of a wide range of actuators and drives.

They are suitable for choking and regulating the flow.

NO: for steam.

1. Epoxy coating.
2. Lever suitable for intermediate regulation.
3. Lockable operation lever.
4. A notch machined at the top of the stem indicates the position of the disc and allows adjusting the command to the correct position, when the command/lever is removed.
5. Compact design.
6. Integrated ISO 5211 flange.
7. Threaded holes suitable for mounting between PN16 for DN25-300 flanges (on request PN 10) and for mounting between PN 10 for DN 350-600 flanges.

Accessories

- ➔ Extension for water main system connection
- ➔ Position indicator and padlocking for gear box
- ➔ Micro-switch for gear box
- ➔ Kit: micro-switches for ON/OFF position indicator

Actuators

- ➔ Double acting and single acting pneumatic actuators
On request: micro-switches, position indicators
- ➔ Electric actuators
- ➔ Gear box
- ➔ Chain driven control

Refer to specifications on page 75

In conformity with directive 97/23/CE PED
In conformity with D.M. 174 (directive 97/83/CE)

Construction and testing norms (correspondences):

Face-to-face: EN558/1-20 (ISO 5752-20, DIN 3202K1)

Flanges: EN1092, ANSI B16.5 #150

Design: EN593, EN13445, ISO 5211, EN12570

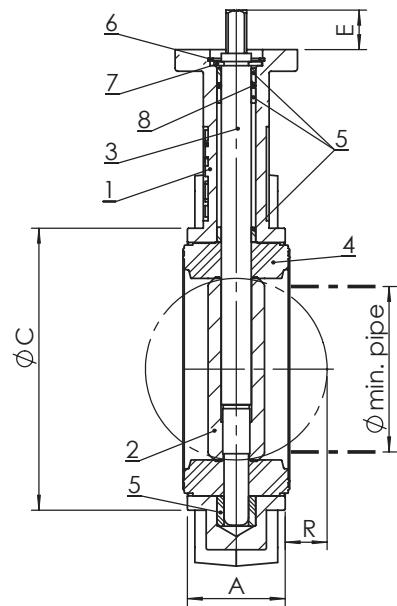

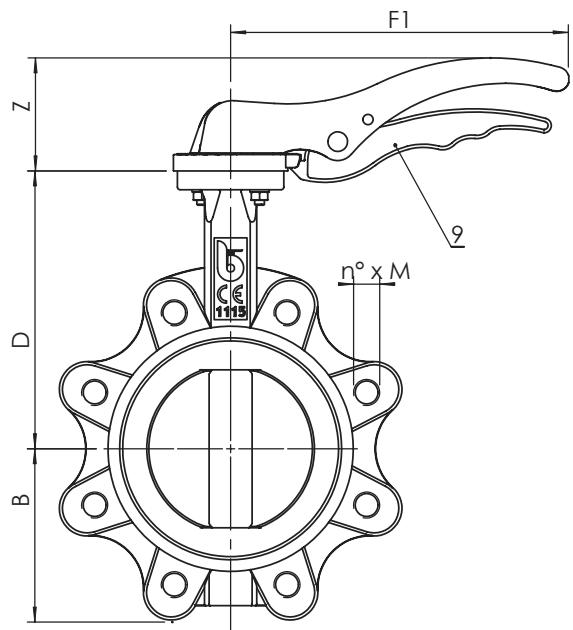

Marking: EN19

Testing: 100% testing in accordance with EN 12266 cat. A (ISO 5208 cat. A)

E	20	26	26	26
S	11	14	17	27

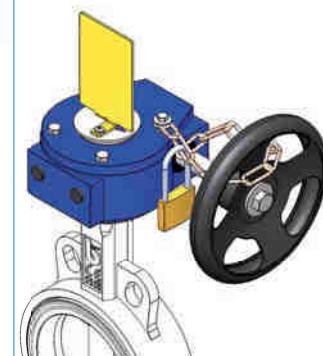

Shut-off valves

Position indicator and padlocking for gear box

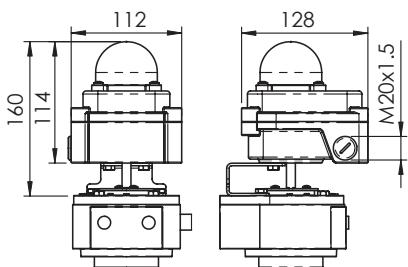

DN	25-150	200-400
A	100	120
B	60	80

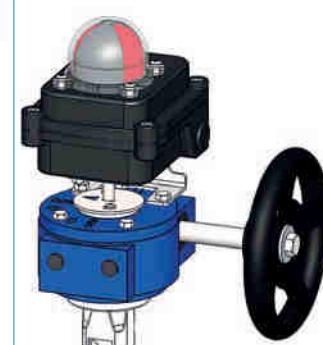

1) Position indicator
2) Chain for padlocking

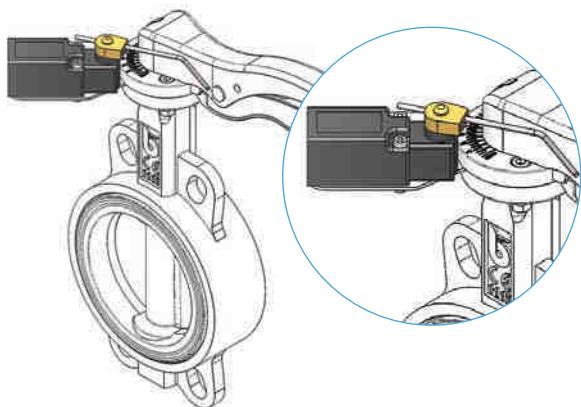

Limit switches box for gear box

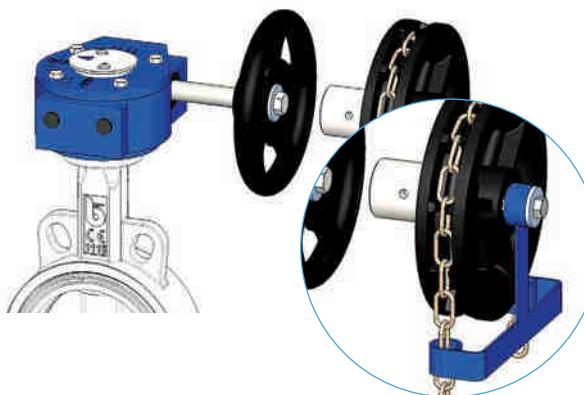

Mechanical switches per standard.
Available on request: proximity switches,
ATEX explosion proof proximity switches.

Limit switches kit for ON-OFF indication

Chain driver kit

Butterfly valves

Instruction and Recommendations for series J9 - L9

The information provided here is delivered with each product, and contains "Instructions for use and maintenance"; it is also available on our website: www.brandoni.it (download section)

INSTALLATION AND TRANSPORT

- Keep in dry and closed place.
- While stored, the disc must be partially open (Fig. 1).
- Avoid knocks, take special care to protect lever, hand wheel, gear boxes/actuators.
- Do not use lever or hand wheel to lift the valve.

MAINTENANCE

The valve does not require maintenance.

RECOMMENDATIONS

Before carrying out maintenance or dismantling the valve, be sure that the pipes, valves and liquids have cooled down, that the pressure has decreased and that the lines and pipes have been drained in case of toxic, corrosive, inflammable or caustic liquids.

Temperatures above 50°C and below 0°C might cause damage to people.

INSTALLATION

- Handle with care.
- Do not weld the flanges to the piping after installing the valve.
- Water hammers might cause damage and ruptures. Inclination, twisting and misalignments of the piping may subject the valve to stress, once installed. It is recommended that elastic joints be used in order to reduce these effects as much as possible. The disc must be partially open (Fig. 1).

FIG. 1

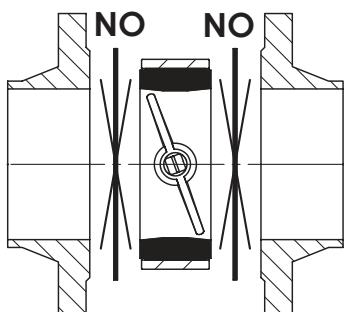

FIG. 2

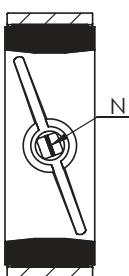

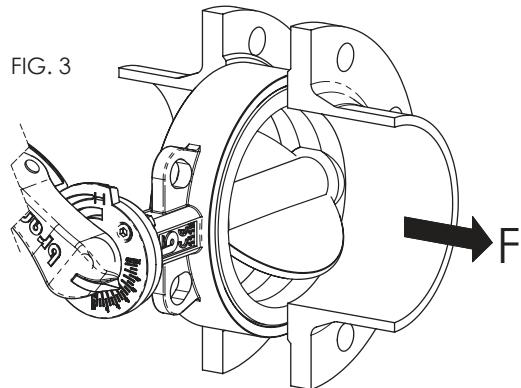

FIG. 3

The stem has a machined notch N (Fig. 2), which indicates the position of the disc; consider this indication, in order to mount the levers and actuators correctly.

The mounting can be made with the stem axis in a horizontal or vertical position. In case the fluid contains suspended solid particles (for example, sand, impurities, etc.) or solid particles that may leave deposits, it is recommend that the valve be installed with its axis horizontal, and in such a way that the bottom end of the disc opens in the direction of flow, F. (Fig. 3) The item L9 allows the dismantling of the pipes downstream, for pressures below 6 bar. For end of line installation:

- SERIES J9 (all pressures), series L9 (pressure > 6 bar): counter flange MUST be installed
- SERIES L9 (pressure < 6 bar): it is recommended that a counter flange be installed.

Verify maximum working pressure and limits of use under section "maximum pressure".

Place the valve between two flanges. While placing the valve, ensure there is sufficient space in order not to damage the rubber. Do not mount seals between valve and flanges (Fig. 1). Carefully clean the contact surface. Do not install the butterfly valve in direct contact with a rubber surface

(for example, expansion joints); the best installation is when the rubber is in contact with metal (Fig. 4).

In order to achieve correct working, the internal diameter of the pipe must be greater than the value indicated in the chart. Do not weld the flanges to the tube if the valve has already been installed. It is recommended that the flanges listed in the chart be used. As far as possible, avoid flat flanges for welding (EN 1092 01 type); if these flanges are used, ensure perfect centring between the flange and valve, and be sure to weld exactly edgewise to the flange. Do not let protrusions or sharp edges on the piping cause damage to the rubber surface of the valve (Fig. 5).

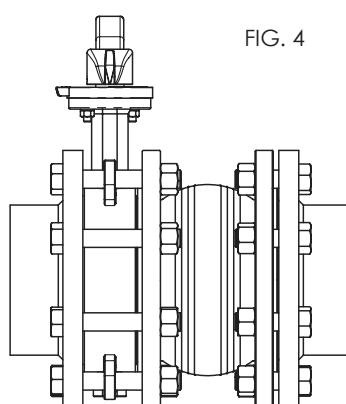

FIG. 4

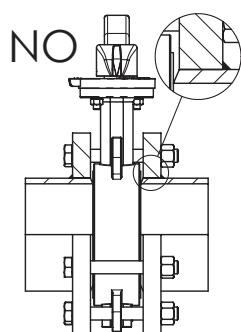

FIG. 5

Centre the valve on holes while using wafer type valves.
Tighten the bolts crosswise and progressively, in order to distribute the pressure equally before the body and flanges come into contact with each other. (Fig. 6)

With regard to the Lug version, check that the screws are the correct length, in order to allow complete compression of the lining rubber.

Turbulences of the fluid might increase erosion and reduce the life-cycle of the valve. Install the valve at a distance of at least $1 \times DN$ upstream, and at a distance of $2-3 \times DN$ downstream, away from fittings or bends.

In the open position, the valve is larger than the nominal Face to Face value.

Check that no other components of the piping interfere or create damage or malfunction (Fig. 7A).

If they do, a spacer should be inserted for the valve to operate correctly (Fig. 7B).

SONDEX

S21/S22 + S36+S47 + S64

Plate Heat Exchanger

Recommended Applications:

The **S21/S22, S36+S47 and S64** range of **Sondex** plate heat exchangers is specially designed for the HVAC area, the geothermal-, marine- and heat recovery area as well as for the industrial- and chemical market.

Design Principle:

The **Sondex** plate range with lengths up to 1.9 m and up to extra "long" thermal pattern, will cover many duties up to 150 m³/h in a single pass solution, which means that all connections are on the head side. This will ensure easy pipe- and service work, and by dismantling the exchanger for service, no pipes need to be removed.

The heat transfer is obtained, when the warm medium transfers energy through the thin, strong flow plates between the channels and delivers it to the cold opposing medium without mixing the two media. Countercurrent flow creates the optimum efficiency.

The plate- and inlet design allows an effective and easy CIP (Cleaning In Place) of all "flow" surfaces.

Flow Plates:

The corrugated "herringbone" pattern ensures turbulent flow in the whole effective area. Furthermore, this pattern brings "metallic" contact between the plates, and together with lock devices on the gaskets, the plate pack is easily assembled.

The plate pack is held firm and safely between the fixed head and movable follower of the frames.

Data Required for Correct Quotation:

Duty, flow rate, type of media, temperatures, working pressure, pressure losses and thermodynamic properties determine the choice of exchanger type, size of heat surface and plate pattern.

Technical Information

Frame:

Painted frame with the clamping bolts placed around the frame edge.

Standard colour by painted frame:
Blue RAL 5010.

Available in other colours.

Working pressure:

The painted frames are designed for working pressure: 0.6/1.0/1.6/2.5 MPa

Intermediate Frames:

Intermediate frames and corner blocks for IS and FS frames in stainless steel.

Construction Standard:

According to PED 97/23/EC:

A-D "Merkblätter"

According to ASME CODE:

ASME VIII, DIV. 1

Connections:

DN100 flange Carbon steel, rubberlined or cladded, with

AISI316 or titanium.

According to all known standards.
3" & 4"/DN80/100 dairy unions.
According to all known standards.

Plates:

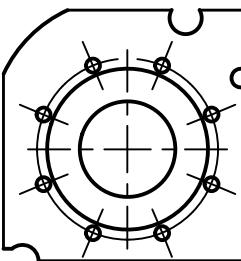

Standard material
AISI 304, AISI 316 and titanium, 254 SMO.
Also 2 x 0.4 mm "Sonder Safe" plates.
Not standard: Hastelloy C 276 and other pressable materials.

Gaskets:

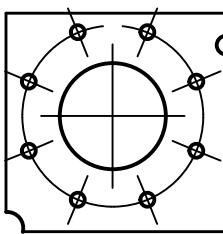

The gaskets are the unique "Sonder Lock" or "hang-on", non-glued type.
Standard material: Nitrile, EPDM and Viton.

Extra Equipment:

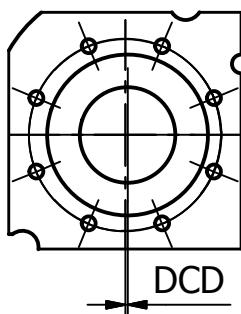

Safety covers in stainless steel.
Insulating jacket.
Assembling spanner.
Foundation feet for frame.

- RTD, TC OR THERMISTOR
- CHOICE OF TERMINATION STYLES
- TRANSMITTER OPTIONS
- FULL RANGE OF THERMOWELLS

INTRODUCTION

Status Instruments Ltd provide a complete range of sensors for temperature measurement. Our sensors include:

- PLATINUM RESISTANCE TEMPERATURE DETECTORS
- THERMOCOUPLES
- THERMISTORS

Our experience has enabled us to offer a comprehensive range of styles to provide the ideal sensor for every application and all manufactured under our ISO 9001 quality procedures. Complete sensor assemblies may be ordered by simply specifying the respective order code for each component required. Unless you specifically request that the components are to be supplied separately, we will assemble the components into a complete unit.

SENSOR SENSITIVITY

This may be defined as the change in sensor output relative to the temperature change it is detecting. Thermocouples produce a non-linear voltage output proportional to the temperature difference between the Hot or measuring junction and the Cold or reference junction, sensitivities vary typically from about (20 to 50) $\mu\text{V}/^\circ\text{C}$. Pt100 Platinum resistance sensors change their resistance as a function of temperature. The most commonly used exhibit a $0.385 \Omega/^\circ\text{C}$ change. Thermistors provide a much higher change of resistance with temperature, but have restricted ranges and are very non-linear unless used over narrow temperature spans.

STANDARD TEMP. SENSORS (STS) SERIES

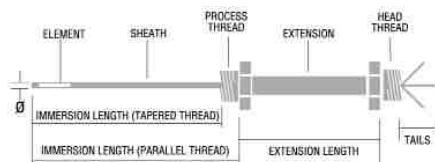

Temperature sensors can be supplied in a variety of styles and configurations, utilising thermocouple or thermistor elements as an alternative to Pt100 elements. If your exact requirements are not readily identified please contact our sales staff who will be pleased to discuss your application and provide a quotation.

(All dimensions in mm unless otherwise stated)

STS STYLE 1

Welded 316 ST/STEEL construction for screw fitting into process connections or STW series pockets (except style 2).

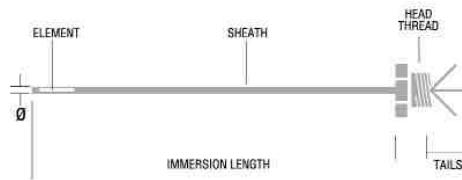

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	6.0 dia x 75, 100, 150, 200, 250 immersion
Process Thread	1/2" BSP parallel
Extension	12.7 dia x 75 long
Head Thread	M24 x 1.5
Tails	3 wire 7/0.2 Cu PTFE insulated, 150 long
Temp. Range	(-50 to 200) $^\circ\text{C}$ (at tip)

STS STYLE 2

All welded 316 ST/STEEL construction sensor for fitting into a compression gland.

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	6.0 dia x 75, 100, 150, 200, 250 immersion
Head Thread	M24 x 1.5
Tails	3 wire 7/0.2 Cu PTFE insulated, 150 long
Temp. Range	(-50 to 200) $^\circ\text{C}$ (at tip).

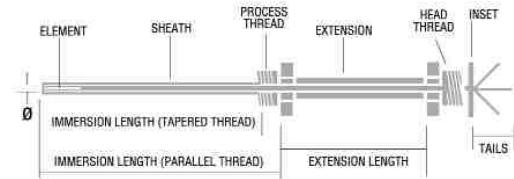

TEMPERATURE PROBES & ACCESSORIES

STS STYLE 3

All welded 316 ST/STEEL construction combined inset sensor and pocket. This sensor is designed to be used with a spring mounting kit fitted to the transmitter or terminal block to provide faster response times. The type of transmitter/terminal block and connecting head required must be specified when ordering.

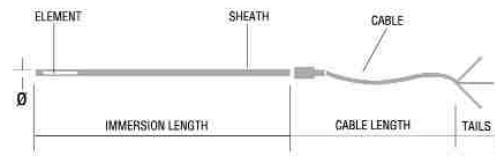

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	7.9 dia x 75, 100, 150, 200, 250 immersion
Process Thread	½" BSP parallel
Extension	12.7 dia x 75 long
Head Thread	M24 x 1.5
Tails	3 wire 7/0.2 Cu PTFE insulated, 150 long (-50 to 200) °C (at tip)
Temp. Range	

STS STYLE 4

Flying lead sensor with 316 ST/STEEL sheath for fitting into a compression gland.

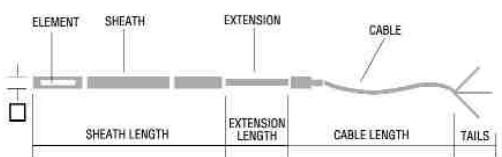

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	6.0 dia x 75, 100, 150, 200, 250 immersion
Cable	3 wire 7/0.2 Cu PTFE insulated, 1 m long
Temp. Range	(-50 to 200) °C (at tip)

STS STYLE 5

Square aluminium block, strap-on-sensor with flying lead for clamping directly to pipes.

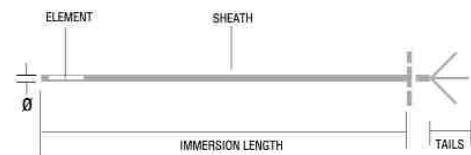

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	¼" square x 50 long
Extension	4.0 dia x 19 long
Cable	3 wire 7/0.2 Cu PTFE insulated, 1 m long
Temp Range	(-50 to 200) °C (at tip)

STS STYLE 6

316 ST/STEEL sensor suitable for energy management applications such as duct air and outside air temperature. This sensor can ONLY be used in conjunction with the SCH4 series connecting head.

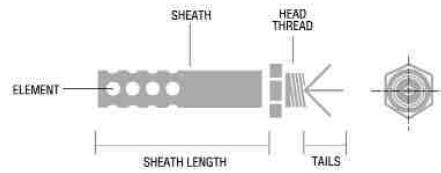

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	6.0 dia x 50, 150, 305 immersion
Flange	20.0 A/F Hex x 1.6 thick
Tails	3 wire 7/0.2Cu PTFE insulated, 75 long
Temp. Range	(-50 to 150) °C (at tip)

STS STYLE 7

All welded 316 ST/STEEL sensor with protective sheath suitable for energy management applications such as outside air temperature. This sensor can ONLY be used in conjunction with the SCH4 or DM500 (M16 entry) series connecting heads.

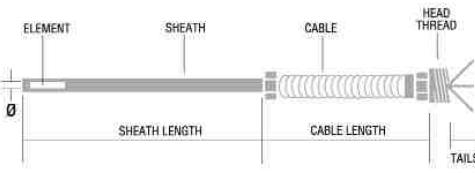

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	12.7 dia x 50 long
Head Thread	M16 x 1.5
Tails	3 wire 7/0.2 Cu PTFE insulated, 75 long (-50 to 50) °C (at tip)

STS STYLE 8

Flying lead sensor with a 316 ST/STEEL sheath designed to be used as a direct replacement for mechanical thermometers in conjunction with the DM400 and DM500 series local indicators, see Instrument section.

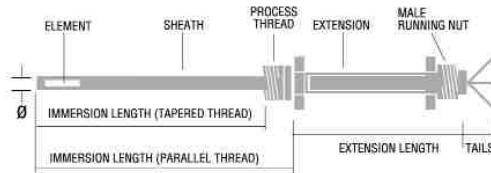

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	12.7 dia x 200 immersion length
Head Thread	M16 x 1.5
Cable	Flexible PVC sheath over cable 3 wire 7/0.2 Cu PTFE insulation, 1 m long (-50 to 200) °C (at tip)
Temp. Range	

STS STYLE 9

All welded 316 ST/STEEL sensor for screw fitting into process connections or STW series pockets. Designed to be used with the Status SCH4 connecting head or the DM400/500 local indicators it features a "running nut" head which enables the indicator to be orientated to the optimum viewing position.

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	6.0 dia x 75,100,150,200,250 immersion
Process Thread	½" BSP parallel
Extension	9.5 dia x 75 long
Head Thread	M16 x 1.5
Tails	3 wire 7/0.2 Cu PTFE insulated, 150 long (-50 to 200) °C (at tip)
Temp. Range	

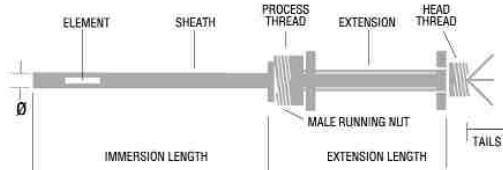

TEMPERATURE PROBES & ACCESSORIES

STS STYLE 10

All welded 316 ST/STEEL sensor for screw fitting into an internal thread hygienic type process connection.

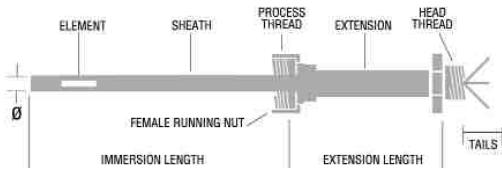

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	6.0 dia x 75,100,150,200,250 immersion
Process Thread	¾" BSP parallel male running nut
Extension	12.7 dia x 75 long
Head Thread	M24 x 1.5
Tails	3 wire 7.0.2 Cu PTFE insulated, 150 long
Temp. Range	(-50 to 200) °C (at tip)

STS STYLE 11

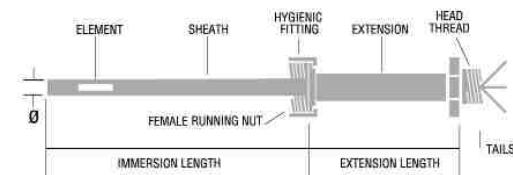

All welded 316 ST/STEEL sensor for screw fitting into an external thread hygienic type process connection.

Element	Pt100 to BS.EN 60751 IEC751 Class B*
Sheath	6.0 dia x 75,100,150,200,250 immersion
Process Thread	¾" BSP parallel female running nut
Extension	12.7 dia x 75 long
Head Thread	M24 x 1.5
Tails	3 wire 7.0.2 Cu PTFE insulated, 150 long
Temp. Range	(-50 to 200) °C (at tip)

STS STYLE 12

All welded 316 ST/STEEL sensor for fitting to various hygienic process connections e.g. IDF, RJT, SMS patterns. Due to the wide variety of type and size of fittings, all sensors to this style are manufactured to customers specifications.

STW SERIES POCKETS/ THERMOWELLS

Some sensors can be fitted directly into the process by means of an integral process connection or by using an appropriate compression fitting. Other applications require a pocket or thermowell which is a permanent fitting into the process yet allows the sensor to be inserted or removed without interruption.

Pockets invariably increase the response time and obviously the thicker and heavier the pocket the more the response time will be increased. Some styles use spring loading which keeps the inset in permanent contact with the pocket. However, it is the radial clearance between the inset and pocket which has the greatest influence on response time.

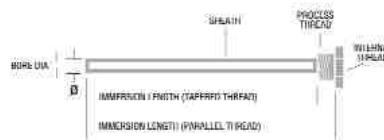

For improved response the inset should be assembled into the pocket using thermally conductive grease. The following illustrations show the six most popular styles of pockets/thermowells.

NOTE: Pocket immersion lengths are relative to the probe lengths shown.

STW STYLE 1

All welded 316 ST/STEEL construction for screw fitting into process connection, suitable for STS sensors Style 1 and 9.

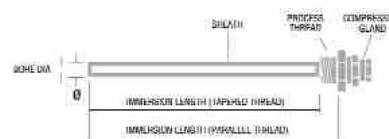

Sheath	7.9 dia x 71, 96, 146, 196, 246 immersion
Probe lengths	75, 100, 150, 200, 250
Process thread	¾" BSP Parallel
Internal thread	1½" BSP

STW STYLE 2

All welded 316 ST/STEEL construction with brass compression gland, suitable for style 2, 4 & 6 sensors.

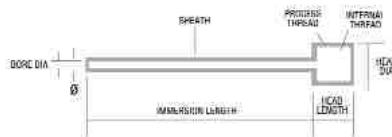

Sheath	7.9 dia x 23, 48, 98, 148, 198 immersion
Probe lengths	75, 100, 150, 200, 250
Process thread	1½" BSPT
Compression fitting	¼" BSPT x 6.0 dia.

STW STYLE 3

All welded 316 ST/STEEL construction 'weld-in' pocket, suitable for Style 1,9 and Style 2, 4 & 6 sensors when used in conjunction with a compression gland.

Sheath	7.9 dia x 55, 80, 130, 180, 230 immersion
Probe lengths	75, 100, 150, 200, 250
Head	25.4 dia x 26 long typical
Internal Thread	1½" BSP Parallel

TEMPERATURE PROBES & ACCESSORIES

STW STYLE 4

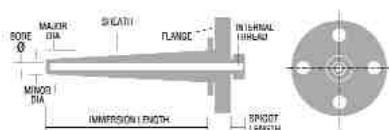

Solid turned 316 ST/STEEL construction sensor for screw fitting into process connection, suitable for Style 1 sensors.

Parallel Sheath	13.4 dia x 57 & 82 immersion
Probe lengths	75 & 100
Tapered Sheath	13.4 to 19.0 dia x 132, 182, 232 immersion
Probe lengths	150, 200, 250
Process Thread	3/4" BSP Parallel
Internal Thread	1/2" BSP Parallel

STW STYLE 5

All welded 316 ST/STEEL construction for bolting to a flanged process connection. Due to the wide variety of, dimensional, material, pressure and pipe size requirements, all thermowells of this style are manufactured to customers specifications.

ORDER CODE

STS	/	STYLE	/	IMMERSION LENGTH

INSTALLAZIONE INSTALLATION

- Maneggiare con cura.
- Montare nel senso corretto.
- Evitare colpi d'arie che possono provocare danni irreparabili.
- In caso di utilizzo con fluidi a temperatura elevata prestare attenzione al rischio di ustioni al contatto.
- Non smontare o eseguire interventi di manutenzione con impianto in pressione.
- Utilizzare il foro "O" per l'imbragatura- sollevamento.

Montaggio: avvicinare le controflange lasciando un gioco G adeguato al montaggio della valvola. Posizionare un bullone in uno dei fori inferiori delle flange (1) in corrispondenza delle alette presenti sul lato della valvola e posizionare la valvola appoggiando sul bullone una delle alette (2). Montare i restante i bulloni e serrarli a croce.

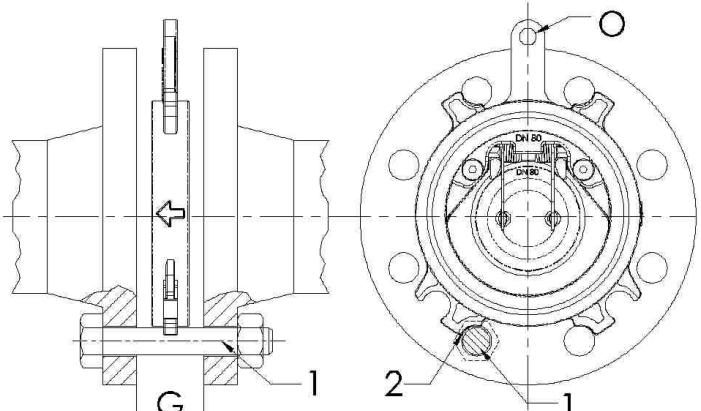

- Handle with care.
- Mount in the correct sense.
- Avoid pressure shock that can cause irreparable damages.
- Use hole "O" for the lifting.
- In case of use with hot fluids pay attention to the risk of scald.
- Do not dismantle or execute maintenance with pressure in the plant.

Mounting: draw near the flanges leaving a space G suitable for the mounting. Position a bolt in one of the inferior holes of the flange (1) corresponding to the tongue on the side of the valve and position the valve leaning one of the tongue the bolt.

STOCCAGGIO STORING

Conservare in luogo asciutto
Keep in a dry and cold place

AVVERTENZE

WARNING

ADVERTENCIA IMPORTANTE

Prima di procedere a qualunque intervento di manutenzione o smontaggio: attendere il raffreddamento di tubazioni, valvola e fluido, scaricare la pressione e drenare linea e tubazioni in presenza di fluidi tossici, corrosivi, infiammabili o caustici.

Temperature oltre i 50°C e sotto gli 0°C possono causare danni alle persone.

Before to proceed in any intervention of maintenance or disassembly: wait the cooling of the piping, the valve and the fluid, let the pressure escape and drain line and piping in the presence of poisonous, corrosive, inflammable and caustic fluids.

Temperature over 50°C and under 0°C can cause damages to people.

Antes de proceder a cualquier intervención de mantenimiento o desmontaje: esperar el enfriamiento de la tubería, válvula y fluido, descargar la presión y drenar la línea de tubería con la presencia de fluidos tóxicos, corrosivos, inflamables o causticos.

Temperaturas por encima de 50°C y por debajo de 0°C pueden causar daños personales.

INSTALLAZIONE INSTALLATION INSTALACIÓN

Evitare inclinazioni, torsioni e disallineamenti delle tubazioni che possono sollecitare la valvola una volta installata.

Non utilizzare le parti più deboli (maniglia, volantino) per sollevare la valvola. Il disco della valvola deve essere in posizione semipiena (Fig. 1).

Piazzare la valvola tra due flange. Assicurarsi che, durante il posizionamento della valvola tra le flange, ci sia sufficiente spazio da non danneggiare la gomma. Non montare guarnizioni tra valvole e flangia (Fig. 2).

Evitare parti di tubi sporgenti e affilati poiché causano danni sulle superfici di gomma delle valvole (Fig. 3).

Non installare la valvola a farfalla a contatto diretto con una superficie in gomma (es. Giunti elasticci); l'installazione ottimale richiede un contatto gomma su metallo (Fig. 4).

Non saldare le flange al tubo quando la valvola è già installata. Raccomandiamo di usare le flange del tipo a collarino (Fig. 5A).

Quando si utilizzano flange piatte assicurarsi che siano saldate esattamente a filo della flangia (Fig. 5B).

STOCCAGGIO E TRASPORTO STORING AND TRANSPORTING ALMACENAJE Y TRANSPORTE

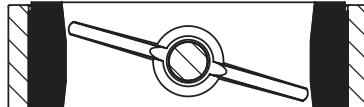

- Maneggiare con cura.
- Conservare in ambiente chiuso e asciutto.
- Durante lo stoccaggio il disco della valvola deve essere in posizione semipiena (Fig 1).
- Evitare urti, specialmente sulle parti più deboli (maniglia, volantino, riduttori / attuatori).
- Non utilizzare le parti più deboli (maniglia, volantino) per sollevare la valvola.
- Handle with care. Keep in a dry place.
- During the storage the valve disc must be half open (Fig 1).
- Avoid, especially on the most softest parts (handles, wheels, reducers / actuators).
- Do not use the most softest parts (handle, wheel) to lift the valve.
- Manejar con cuidado.
- Mantener en lugar seco y fresco.
- Durante el almacenaje el disco debe de mantenerse en posición semipiena. (Fig 1)
- Evitar golpes, especialmente sobre las parte más débiles (palanca, reductor, volante, actuador).
- No utilizar las partes más débiles (palanca, volante) para manipular-transportar la válvula.

MANUTENZIONE MAINTENANCE MANTENIMIENTO

Non è richiesta manutenzione (non effettuare interventi).
No maintenance required (do not service).

No requiere de ningún tipo de mantenimiento especial.

Fig. 1

INSTALLAZIONE INSTALLATION INSTALACIÓN

Per le versioni Wafer centrare la valvola sugli occhielli. Serrare i bulloni a croce e progressivamente distribuendo uniformemente la pressione prima del contatto fra corpo e flangia (Fig. 6). I colpi d'ariete possono causare danni e rotture. Raccomandiamo di evitarli o adottare giunti elastici per ridurne gli effetti.

Per la versione LUG, verificare che le viti d'installazione siano della giusta lunghezza, in modo da permettere la compressione completa della gomma manicotto "Liner". La turbolenza del fluido può aumentare l'usura e ridurre la vita della valvola. Per ridurre il fenomeno si raccomanda di installare la valvola ad una distanza minima di almeno 1 volta il DN a monte e 2-3 DN a valle di raccordi e curve.

In posizione aperta la valvola presenta un ingombro maggiore dello scartamento nominale. Verificare che non vi siano interferenze con altri elementi della tubazione che possano provocare danni o malfunzionamenti (Fig. 7A). Nel caso installare un distanziatore per consentire il corretto funzionamento (Fig. 7B).

Avoid inclinations, torques and non-alignments of the piping which could stress the valve once installed.

Do not use the softest parts (handle, wheel) to lift the valve.

The valve disc must be half open (Fig. 1).

Place the valve between two flanges. When placing valves between flanges, make sure that there is enough space not to damage rubber.

Do not install gaskets between valve and flanges. (Fig. 2).

Protruded sharp ends shall be strictly avoided as it causes damage on/off rubber seating surfaces of the butterfly valve (Fig. 3).

Do not install the butterfly valve on a rubber to rubber surface (e.g. expansion joints); the perfect installation shall be on rubber to metal surface (Fig. 4).

Do not place joints between flange and body - We recommend the use of flanges of the WELDING NECK type (Fig 5A).

When using flat flanges make sure the pipe is welded exactly edgewise with the flange (Fig. 5B).

Centre the valve by bolting the body locator first (Wafer type). Tighten bolts and nuts in progressive and crosswise with bolting pressure evenly distributed until the contact between valve body and flange faces (Fig. 6).

Pressure shocks can cause damages and breakage. We recommend to avoid them if possible or adopt expansion joints that could reduce pressure shocks' effects.

For the LUG type, please verify that the installation screws are of the right longness, in order to allow the complete compression of the liner rubber.

The fluid turbulence may increase the wear and reduce the valve endurance. In order to reduce the instance it is recommended to install the valve at a distance equal to at least 1 time the DN upstream and 2-3 DN downstream of fittings and bends.

In open position the valve shows a greater space occupied than the nominal face to face. You need to verify that there aren't interferences with other elements of the piping which could cause damages or malfunctions (Fig. 7A). In this case you need to set up a spacer to permit the right functioning (Fig. 7B).

Evitare inclinaciones, torsiones o desalinamientos de la tubería que puedan presionar a la válvula una vez instalada.

No utilizar las partes débiles (palanca, volante) para manipular-transportar la válvula.

El disco debe estar en posición semi-abierta (Fig. 1).

Situar la válvula entre dos bárdas. Estar seguro que durante el posicionamiento de la válvula hay

suficiente espacio entre las bárdas para evitar daños en el anillo. No instalar otros elementos o guarniciones entre válvula y bárdas. (Fig. 2).

Los tubos pueden causar daños en la superficie del anillo (Fig. 3).

No instalar la válvula en contacto directo con una superficie de goma (por ejemplo: juntas de expansión). La instalación requiere un contacto metal-goma. (Fig. 4).

No soldar la brida al tubo si la válvula está ya instalada. Se recomienda usar bárdas tipo WELDING NECK (Fig 5A).

Con bárdas planas, asegurarse que la brida está soldada hasta el final de la misma (Fig. 5B).

Para la versión wafer centrar la válvula sobre las orejetas. Los bulones deben ser apretados en cruz distribuyendo uniformemente la presión después del contacto entre el cuerpo y las bárdas (Fig. 6).

Los golpes de ariete pueden causar serios daños. Para evitarlos, se recomienda el uso de juntas de expansión para reducir los efectos del mismo.

Para la versión LUG, verificar que la tornillería utilizada tenga la largura justa, de modo que se permita la total compresión del anillo de cierre. La turbolenza del fluido podría aumentar el desgaste y limitar la vida de la válvula. Para reducir el fenómeno se recomienda instalar la válvula a una distancia de una vez de DN, por lo menos, aguas arriba y de 2-3 DN aguas abajo de empalmes y curvas.

Al estar abierta la válvula ocupa un espacio mayor que el de la anchura nominal. Comprueben que no hayan interferencias con otros elementos de la tubería que pudieran provocar daños o funcionamientos defectuosos (Fig. 7A). En tal caso habrá que instalar un distanciador para permitir un fucionamiento correcto (Fig. 7B).
